

RF Exposure Requirements

Product Description: Bluetooth Wireless Earbuds

Model No.: 900238R-40-C29-EAR, 900260G-40-P39, 900261G-40-G20, 900263B-40-G12,
900264B-40-G28, 900265B-40-X53, 900267B-40-D11, 900270R-40-B12,
900327B-40-G01, 900329R-40-G10, 900330G-40-G10, 900331G-40-G40, 900238,
900260, 900261, 900263, 900265, 900267, 900270, 900327, 900329, 900330, 900331,
900264

FCC ID: 2ARUI-KKSOLL

According to the KDB 447498 D01 v06 section 4.3.1, for 100 MHz to 6 GHz and test separation distances ≤ 50 mm, the 1-g and 10-g SAR test exclusion thresholds are determined by the following:

$[(\text{max. power of channel, including tune-up tolerance, mW}) / (\text{min. test separation distance, mm})] \cdot [\sqrt{f(\text{GHz})}] \leq 3.0$ for 1-g SAR and ≤ 7.5 for 10-g extremity SAR, where

- $f(\text{GHz})$ is the RF channel transmit frequency in GHz

- Power and distance are rounded to the nearest mW and mm before calculation

- The result is rounded to one decimal place for comparison

Calculation Result:

Tx frequency range: 2402-2480MHz

Min. test separation distance: 5mm

Maximum Conducted Output Power: -2.183dBm

Tune-Up output power: -2dBm

RF channel transmit frequency: 2402MHz

Result: 0.2

Limit: 3.0

The exclusion thresholds is $0.2 < 3.0$, so the transmitter complies with the RF exposure requirements and the SAR is not required.
