

User Manual of SRM200A(Rev1.0)

1. Introduction

The SRM200A is a quad mode module supporting Sigfox, BLE, WiFi and GPS.

This Module able to transmit and receive messages using the SIGFOX network.

The typical applications can be used as a low power tracking device.

The application use WIFI or GPS to determine location. It will then transmit the location information via SIGFOX.

It also will transmit other information like temperature, accelerometer, and so on.

2. Hardware Architecture:

2.1 Main Chipset Information

| Item | Vendor | Part Number |
|--------------|----------------------|-------------|
| SigFox | STMicroelectronics | S2-LP |
| BLE | NORDIC semiconductor | nRF52832 |
| WIFI | ESPRESSIF | ESP8285 |
| GPS(GLONASS) | UBLOX | UBX-G8020 |

2.2 Circuit Block Diagram

The major internal and external block diagram of SRM200A is illustrated in Figure 1-1.

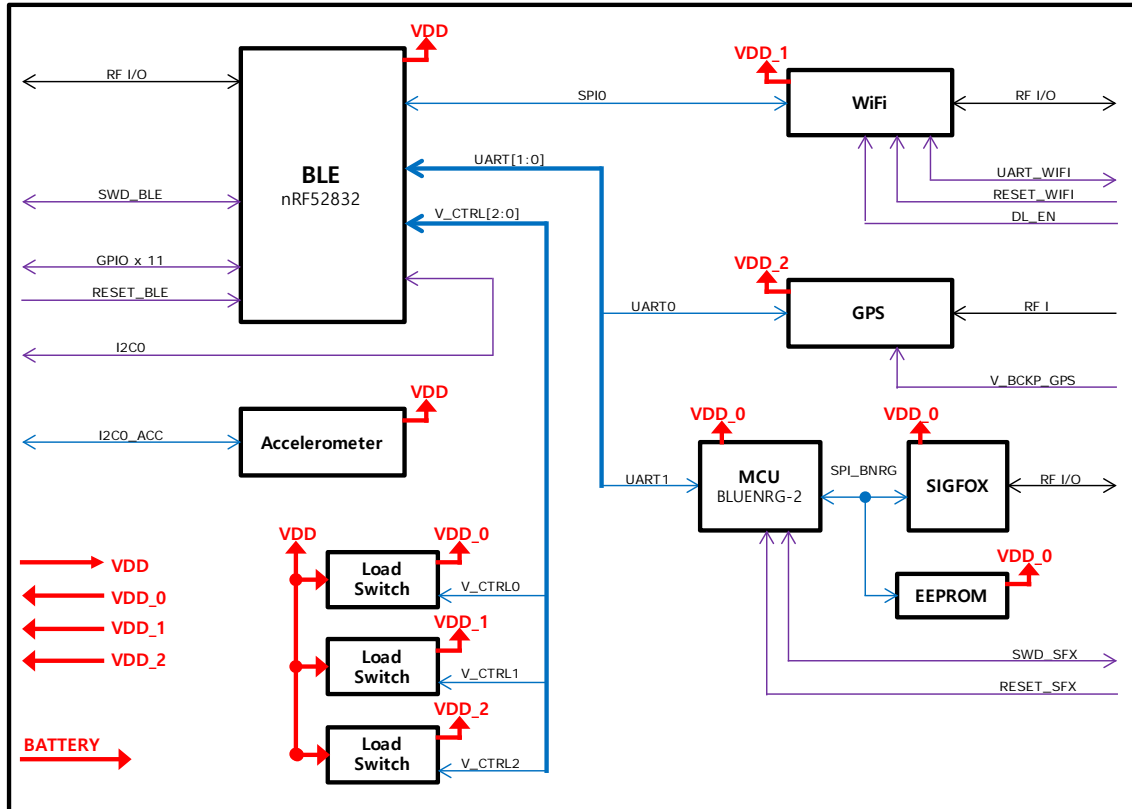

Figure 1-1 SRM200A block diagram and System Interface

3. Operational Description

-SIGFOX

SIGFOX able to transmit and receive messages using the SIGFOX network.

This module address the RC1(Europe), RC2(North America), RC3(Japan), RC4(Australia, new Zealand), RC5(Korea).

This module is used by receiving a sigfox beacon-signal from base station and changing to the frequency used in that country.

-BLE

Bluetooth 4.2 optimized for low-power applications.

The RADIO contains a 2.4 GHz radio receiver and a 2.4 GHz radio transmitter that is compatible with Nordic's proprietary 1 Mbps radio modes in addition to 1 Mbps *Bluetooth*® low energy mode.

-WIFI

ESP8285 implements TCP/IP, the full 802.11 b/g/n/e/i WLAN MAC protocol and Wi-Fi 2.4GHz.

Direct specification. It supports not only basic service set (BSS) operations under the distributed control function (DCF) but also P2P group operation compliant with the latest Wi-Fi P2P protocol. Low level protocol functions are handled automatically by ESP8285.

- RTS/CTS
- acknowledgement
- fragmentation and defragmentation
- aggregation
- frame encapsulation (802.11h/RFC 1042)
- automatic beacon monitoring / scanning, and
- P2P Wi-Fi direct

Passive or active scanning, as well as P2P discovery procedure is performed autonomously once initiated by the appropriate command. Power management is handled with minimum interaction with host to minimize active duty period.

-GPS (GLONASS)

The application use GPS(GLONASS) to determine location. It will then transmit the location information via SIGFOX. It also will transmit other information like temperature, accelerometer, and so on.

-NFC

Type 2 near field communication (NFC-A) tag with wakeup-on-field and touch-to-pair capabilities

3.1 Features

- SIGFOX

- > Sigfox up-link and down-link functionality controlled by CLI commands
- > Temperature sensor
- > Ultra-low power consumption
- > High performance narrow-band Sigfox

- BLE

- > Based on Nordic Semiconductor nRF52832 Bluetooth Smart Soc (ARM Cortex –M4F, 512KB flash, and 64KB RAM embedded)
- > Ultra-low power multiprotocol support
- > BLE Wireless application
- > Bluetooth specification Version 4.2 (LE single mode) compliant
- > External interface: 32 GPIO pins for NFC(tag), SPI, TWI, UART, Crystal (32.768 KHz) and ADC

-WIFI

- > 2.4 GHz receiver
- > 2.4 GHz transmitter
- > High speed clock generators and crystal oscillator
- > Real-Time Clock
- > Bias and regulators
- > Power management

-GPS (GLONASS)

- > down to 1 s acquisition time
- > up to 18 Hz navigation update rate in single GNSS mode
- > Supports GPS and GLONASS as well as SBAS and QZSS
- > Supports u-blox's AssistNow Online / AssistNow Offline A-GNSS services and is OMA SUPL 1.0 compliant
- > Supports u-blox's AssistNow Autonomous (no connectivity required)
- > Supports crystal oscillator and TCXO
- > Supports a built-in DC/DC converter and an intelligent, user configurable power management
- > Supports data logging, odometer, geo-fencing, spoofing detection, and message integrity protection.

-NFC

- > Wake-on-field low power field detection (SENSE) mode
- > Frame assemble and disassemble for the NFC-A frames specified by the NFC Forum
- > Programmable frame timing controller
- > Integrated automatic collision resolution, CRC and parity functions

3.2 Time base of the RF frequency

-SIGFOX

For Sigfox RF frequency, a TCXO(50MHz) is a clock reference.

-BLE

Using external 32.768 kHz crystal for RTC.

The 64 MHz crystal oscillator (HFXO) is controlled by a 32 MHz external crystal.

-WIFI

The high frequency clock on ESP8285 is used to drive both transmit and receive mixers.

This clock is generated from internal crystal oscillator and external crystal. The crystal frequency is 26 MHz.

-GPS(GLONASS)

The RTC is driven internally by a 32.768 Hz oscillator, which makes use of an external RTC crystal.

For GPS(GLONASS) RF frequency, a TCXO(26MHz) is a clock reference.

3.3 Transmission

-SIGFOX

The Tx path produces a DBPSK-modulated signal. Modulate RF signal generated by the synthesizer. The modulated RF signal is fed to the integrated RX/TX switch and antenna interface and then out of the S2-LP.

-BLE

The RADIO contains a 2.4 GHz radio receiver and a 2.4 GHz radio transmitter that is compatible with Nordic's proprietary 1 Mbps radio modes in addition to 1 Mbps *Bluetooth*® low energy mode.

-WIFI

The 2.4 GHz transmitter up-converts the quadrature baseband signals to 2.4 GHz, and drives the antenna with a high-power CMOS power amplifier. The function of digital calibration further improves the linearity of the power amplifier, enabling a state of art performance of delivering +19.5 dBm average power for 802.11b transmission and +16dBm for 802.11n transmission.

Additional calibrations are integrated to offset any imperfections of the radio, such as:

- Carrier leakage
- I/Q phase matching
- Baseband nonlinearities

These built-in calibration functions reduce the product test time and make the test equipment unnecessary.

3.4 Receiver

-SIGFOX

The Rx path is able to receive sub-1GHz signal and the noise amplifier is built in the inside of the chip, it amplifies the received signal by the low noise amplifier according to the receiving intensity, and the amplified signal is converted into the digital signal through the ADC, Packets will be interpreted.

-BLE

The RADIO contains a 2.4 GHz radio receiver and a 2.4 GHz radio transmitter that is compatible with Nordic's proprietary 1 Mbps radio modes in addition to 1 Mbps *Bluetooth*® low energy mode.

-WIFI

The 2.4-GHz receiver down-converts the RF signals to quadrature baseband signals and converts them to the digital domain with 2 high resolution high speed ADCs. To adapt to varying signal channel conditions, RF filters, automatic gain control (AGC), DC offset cancelation circuits and baseband filters are integrated within ESP8285.

-GPS(GLONASS)

u-blox 8 GNSS chips are single GNSS receivers which can receive and track either GPS or GLONASS signals. By default the u-blox 8 receivers are configured for GPS, including SBAS and QZSS reception. If power consumption is a key factor, then QZSS and SBAS should be disabled.

-NFC

The NFCT peripheral (referred to as the 'NFC peripheral' from now on) supports communication signal interface type A and 106 kbps bit rate from the NFC Forum.

3.5 Product Details

-SIGFOX

> Data Modulation

TX : DBPSK

RX : 2GFSK

> Frequency :

| Sigfox zone | Uplink/TX (MHz) | Sigfox zone |
|-------------|---------------------|-------------|
| RC2 | 902.1375 ~ 904.6625 | RC2 |
| RC4 | 920.7375 ~ 923.2625 | RC4 |

-BLE

> Data Modulation : GFSK

> Frequency : 2402-2480MHz

-WIFI

> Data Modulation :

DSSS:CCK,BPSK,QPSK for 802.11b

OFDM:BPSK,QPSK,16QAM,64QAM for 802.11g,n (HT20)

> Frequency Range : RC1,RC3, RC5 는 2412-2472MHz / RC2, RC4는 2412-2462MHz

-GPS(GLONASS)

> Data Modulation : BPSK

> Frequency :

GPS : 1575.42MHz

GLONASS : Around 1602MHz

-NFC

> NFC-A listen mode operation

13.56 MHz input frequency

Bit rate 106 kbps

3.6 Output Power tolerance

- SIGFOX Output power : 23.5dBm (Tolerance: +/- 2dB)
- BLE Output power : 3dBm (Tolerance: +/- 2.0dB)
- WIFI Output power : 12dBm (Tolerance: + 2.0dB)

3.7 SRM200A Category of signal

1) Categorization as Correlated or Completely Uncorrelated

For the purposes of this guidance, transmitter output signals are considered *correlated* if any of the following are true:

- The same digital data are transmitted from two or more antennas in a given symbol period, even with different coding or phase shifts; or,
- Correlation between two transmitted signals exists at any frequency and time delay; or,
- Multiple transmitter outputs serve to focus energy in a given direction or to a given receiver; or,
- The operating mode combines correlated techniques with uncorrelated techniques.

Otherwise, the output signals are considered *completely uncorrelated*.

3.8 Simultaneous transmission

| | BLE | SIGFOX | 2.4GHz WiFi | GPS |
|-------------|-----|--------|-------------|-----|
| BLE | | O | O | O |
| SIGFOX | O | | N/A | N/A |
| 2.4GHz WiFi | O | N/A | | N/A |
| GPS | O | N/A | N/A | |

4. Installation Guide

- Contents

This module is used by mounting on the main board that included antenna.

6.Manufacturer

SEONG JI INDUSTRIAL CO., LTD.

<FCC/IC Warning>

| | |
|---|--|
| <p>FCC Part 15.19 Statements:</p> | <p>This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.</p> <p>Le présent appareil est conforme aux CNR d'Industrie Canada applicables aux appareils radio exempts de licence. L'exploitation est autorisée aux deux conditions suivantes :</p> <p>(1) l'appareil ne doit pas produire de brouillage, et (2) l'utilisateur de l'appareil doit accepter tout brouillage radioélectrique subi, même si le brouillage est susceptible d'en compromettre le fonctionnement.</p> |
| <p>FCC Part 15.21 statement</p> | <p>Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate this equipment.</p> |
| <p><Regulatory notice to host manufacturer according to KDB 996369 D03 OEM Manual v01></p> | |
| <p>List of applicable FCC rules</p> | <p>This module has been granted modular approval as below listed FCC rule parts. -FCC Rule parts 15C(15.247)</p> |
| <p>Summarize the specific operational use conditions</p> | <p>-The OEM integrator should use equivalent antennas which is the same type and equal or less gain than an antenna listed in this instruction manual.</p> |
| <p>RF exposure considerations</p> | <p>The module has been certified for integration into products only by OEM integrators under the following condition:</p> <ul style="list-style-type: none"> -The antenna(s) must be installed such that a minimum separation distance of at least 20 cm is maintained between the radiator (antenna) and all persons at all times. -The transmitter module must not be co-located or operating in conjunction with any other antenna or transmitter except in accordance with FCC multi-transmitter product procedures. -Mobile use <p>As long as the three conditions above are met, further transmitter testing will not be required. OEM integrators should provide the minimum separation distance to end users in their end-product manuals.</p> <p>l'exposition aux RF L'antenne (ou les antennes) doit être installée de façon à maintenir à tout instant une distance minimum de au moins 20 cm entre la source de radiation (l'antenne) et toute personne physique. Caution: Any changes or modifications to this device not explicitly approved by manufacturer could void your authority to operate this equipment. Attention: Les changements ou modifications de cet appareil non expressément approuvé par le fabricant peuvent annuler votre droit à utiliser cet équipement.</p> |
| <p>Antennas list</p> | <p>This radio transmitter [25119-SRM200A] has been approved by Innovation, Science and Economic Development Canada to operate with the antenna types listed below, with the maximum permissible gain indicated. Antenna types not included in this list that have a gain greater than the maximum gain indicated for any type listed are strictly prohibited for use with this device.</p> <p>*FCC/IC requirements for antenna list This module is certified with the following antenna. -Type: External Antenna(Dipole antenna) -Max. peak Antenna gain</p> |

| | Frequency band | Sigfox (INNO-ADI-0269) | BT (W5E-WO-03) | WLAN(INNO-EWFSWS-151) |
|---|---|------------------------|----------------|-----------------------|
| | BLE(2.4GHz) | | 3.050dBi | |
| | Sigfox(900MHz) | 1.98dBi | | |
| | WLAN(2.4GHz) | | | 4.44dBi |
| | Any new antenna type, higher gain than listed antenna should be met the requirements of FCC rule 15.203 and 2.1043 as permissive change procedure. The use of a different trace layout other than approved requires a Class II Permissive Change or a New Grant as appropriate. | | | |
| End Product Labeling | <p>The module is labeled with its own FCC ID. If the FCC ID is not visible when the module is installed inside another device, then the outside of the device into which the module is installed must also display a label referring to the enclosed module. In that case, the final end product must be labeled in a visible area with the following:</p> <ul style="list-style-type: none"> -Contains FCC ID: 2AS8LSRM200A -Contains IC: 25119-SRM200A <p>Le module SRM100A est étiqueté avec sa propre identification FCC et son propre numéro de certification IC. Si l'identification FCC et le numéro de certification IC ne sont pas visibles lorsque le module est installé à l'intérieur d'un autre dispositif, la partie externe du dispositif dans lequel le module est installé devra également présenter une étiquette faisant référence au module inclus. Dans ce cas, le produit final devra être étiqueté sur une zone visible avec les informations suivantes :</p> <ul style="list-style-type: none"> « Contient module émetteur identification FCC ID : 2AS8LSRM200A « Contient module émetteur IC : 25119-SRM200A | | | |
| Information on test modes and additional testing requirements | OEM integrator is still responsible for testing their end-product for any additional compliance requirements required with this module installed (for example, digital device emissions, PC peripheral requirements, additional transmitter in the host, etc.). | | | |
| Additional testing, Part 15 Subpart B disclaimer | The final host product also requires Part 15 subpart B compliance testing with the modular transmitter installed to be properly authorized for operation as a Part 15 digital device. | | | |
