Operating Description

Operating Description

Sensate is used for enhanced relaxation to assist users in managing stress. It mechanically vibrates against the sternum of a user at mainly sub-audible frequencies of acoustic vibration under 150 Hz, playing back this sub-audible 'sound track' from internal memory, in sync with audible sound tracks played back to the user from the Sensate app.

The app runs on a selection of mobile devices (iOS and Android) and audio to sub-audio Synchronisation is managed via Bluetooth Low Energy communication to the Sensate device.

Sensate App

You can download the app for Android [here](#) and iOS [here](#).
