

# FCC Test Report

FOR:

## TELIT Corporation

**Model Number: LE866SV1**

**Product Description: LTE Module**

**FCC ID: RI7LE866SV1**  
**IC ID: 5131A-LE866SV1**

**47 CFR Part 27 for LTE bands**  
**RSS-GEN Issue 4, RSS-139 Issue 3, RSS-130 Issue 1**

**TEST REPORT #: EMC\_VERIZ\_049\_15001\_FCC27\_LTE\_WWAN\_v1.2**  
**DATE: 01-20-2016**

**FCC Recognized**  
**A2LA Accredited**  
**IC recognized # 3462E-1**

**CETECOM Inc.**

6370 Nancy Ridge Drive Suite 101 ♦ San Diego, CA 92121 ♦ U.S.A.  
Phone: +1 (858) 362 2400 ♦ Fax: +1 (858) 587 4809 ♦ E-mail: [info@cetecomusa.com](mailto:info@cetecomusa.com) ♦ <http://www.cetecom.com>  
CETECOM Inc. is a Delaware Corporation with Corporation number: 2905571

Date of Report: 01-20-2016

**Table of Contents**

1 Assessment ..... 4

2 Administrative Data..... 5

    1.1 Identification of the Testing Laboratory Issuing the Test Report ..... 5

    1.2 Identification of the Client ..... 5

    1.3 Identification of the Manufacturer ..... 5

3 Equipment under Test (EUT) ..... 6

    1.4 Specification of the Equipment under Test..... 6

    1.5 Identification of the Equipment under Test (EUT) ..... 7

    1.6 Identification of Accessory equipment ..... 7

    1.7 Environmental conditions during Test ..... 7

    1.8 Dates of Testing ..... 7

4 Subject of Investigation ..... 8

5 Summary of Measurement Results ..... 9

    5.1 LTE Band 4 (1700 MHz): ..... 9

    5.2 LTE Band 4 worst case condition for EIRP and PAR ..... 9

    5.3 LTE Band 13 (700 MHz): ..... 10

    5.4 LTE Band 13 worst case condition for EIRP and PAR ..... 10

6 Measurements ..... 11

    6.1 Measurement Uncertainty ..... 11

    6.2 RF Power Output ..... 12

        6.2.1 *References* ..... 12

        6.2.2 *Measurement Requirements:* ..... 12

        6.2.3 *Limits:* ..... 12

        6.2.4 *Measurement Procedure:* ..... 13

        6.2.5 *Test Results* ..... 14

        6.2.6 *Test Verdict* ..... 107

    6.3 PEAK-AVERAGE Ratio ..... 107

        6.3.1 *References* ..... 107

        6.3.2 *Limits:* ..... 107

        6.3.3 *Results:* ..... 107

        6.3.4 *Verdict:* ..... 107

    6.4 Occupied Bandwidth ..... 108

        6.4.1 *References* ..... 108

        6.4.2 *Limits:* ..... 108

        6.4.3 *Measurement Requirements:* ..... 108

        6.4.4 *Test Method:* ..... 108

        6.4.5 *Test Results / Plots* ..... 109

    6.5 Frequency Stability ..... 138

        6.5.1 *References* ..... 138

        6.5.2 *Measurement requirements:* ..... 138

        6.5.3 *Limits:* ..... 138

        6.5.4 *Summary Test Data:* ..... 139

        6.5.5 *Test Notes:* ..... 139

    6.6 Band Edge (Conducted) / Transmitter Unwanted Emissions ..... 158

        6.6.1 *References* ..... 158

        6.6.2 *Limits:* ..... 158

        6.6.3 *Measurement Procedure* ..... 159

        6.6.4 *Plots LTE Band 4 (1710 MHz – 1755 MHz) QPSK* ..... 160

Date of Report: 01-20-2016

6.6.5	Plots LTE Band 4 (1710 MHz – 1755 MHz) QPSK, cont.	161
6.6.6	Plots LTE Band 4 (1710 MHz – 1755 MHz) QAM	166
6.6.7	Plots LTE Band 13 (777 MHz – 787 MHz) QPSK	170
6.6.8	Plots LTE Band 13 (777 MHz – 787 MHz) QAM	174
6.7	TX Radiated Spurious Emissions	178
6.7.1	References	178
6.7.2	Limits	178
6.7.3	Measurement requirements:	178
6.7.4	Sample Calculations for Radiated Measurements	181
6.7.5	Measurement Survey:	181
6.7.6	Test Conditions:	182
6.7.7	Test Results:	182
7	Test Equipment and Ancillaries used for tests	207
7.1.1	San Diego EMC Lab	207
8	Test Setup Diagrams	209
9	Revision History	212

Date of Report: 01-20-2016

**1 Assessment**

**The following device was evaluated against the applicable criteria specified in FCC rules parts 27 of Title 47 of the Code of Federal Regulations, and in Industry Canada Standards RSS-Gen, RSS-130, RSS-139. No deviations were ascertained during the course of the tests performed.**

Company	Description	Model #
Telit	Telit LTE Module	LE866SV1

**Responsible for Testing Laboratory:**

01-20-2016      Compliance      Milton Ponce Deleon  
 (Test Lab Manager)

Date	Section	Name	Signature
------	---------	------	-----------

**Responsible for the Report:**

01-20-2016      Compliance      Anthony Planinac  
 (EMC Engineer)

Date	Section	Name	Signature
------	---------	------	-----------

The test results of this test report relate exclusively to the test item specified in Section 3. CETECOM Inc. USA does not assume responsibility for any conclusions and generalizations drawn from the test results with regard to other specimens or samples of the type of the equipment represented by the test item. The test report may only be reproduced or published in full. Reproduction or publication of extracts from the report requires the prior written approval of CETECOM Inc. USA.

Date of Report: 01-20-2016

## 2 Administrative Data

### 1.1 Identification of the Testing Laboratory Issuing the Test Report

<b>Company Name:</b>	CETECOM Inc.
<b>Department:</b>	Compliance
<b>Address:</b>	6370 Nancy Ridge Drive, Suite 101 San Diego, CA 92121 U.S.A.
<b>Telephone:</b>	+1 (858) 362 2400
<b>Fax:</b>	+1 (858) 587 4809
<b>Test Lab Manager:</b>	Milton Ponce de Leon

### 1.2 Identification of the Client

<b>Applicant's Name:</b>	Telit Wireless Solutions Inc
<b>Street Address:</b>	3131 RDU Center Drive 135
<b>City/Zip Code</b>	Morrisville NC 27560
<b>Country</b>	USA
<b>Contact Person:</b>	James Hayter
<b>Phone No.</b>	919-439-7977
<b>Fax:</b>	
<b>e-mail:</b>	

### 1.3 Identification of the Manufacturer

<b>Manufacturer's Name:</b>	Same as client.
<b>Manufacturers Address:</b>	
<b>City/Zip Code</b>	
<b>Country</b>	

Date of Report: 01-20-2016

### 3 Equipment under Test (EUT)

#### 1.4 Specification of the Equipment under Test

<b>Marketing Name:</b>	Telit Inc.
<b>Model Number:</b>	LE866SV1
<b>FCC-ID :</b>	RI7LE866SV1
<b>IC ID:</b>	IC: 5131A-LE866SV1, HVIN: LE866-SV1, PMN: LE866-SV1
<b>Product Description:</b>	LTE Module
<b>Operating Frequency Ranges (MHz) / Channels:</b>	LTE Band 13 (700MHz): 777 MHz – 787 MHz LTE Band 4 (1700 MHz): 1710 -1755 MHz
<b>Type(s) of Modulation:</b>	QPSK and 16 QAM
<b>Rated Max average conducted power:</b>	+23dBm +/-1dBm
<b>Antenna info (antenna presented for testing with the development board):</b>	LTE Band 4 (1700): Antenna gain = 2.14 dBi LTE Band 13 (700MHz): Antenna gain = 2.14 dBi
<b>Rated Operating Voltage Range for VZ120Q</b>	Vmin: 3.4V/ <b>Vnom: 3.8V</b> / Vmax: 4.2V
<b>Rated Operating Temperature Range:</b>	-20°C ~ +60°C
<b>Test Sample Status:</b>	Prototype
<b>Other Radios included:</b>	

**Note:** For category 1 devices the max number of bits for uplink is limited to 5160. As a result, Category 1 devices will drop any UL allocations above these values (eg each allocation, in which the couple mcs and number of RBs gives a Transport Block size bigger than allowed by Category 1 requirement, will be dropped). Therefore for TX signals under 16QAM, the max number of RBs will be 27 under CAT1 devices (ref. ETSI TS 136 306, ETSI TS 136 213 )

Date of Report: 01-20-2016

**1.5 Identification of the Equipment under Test (EUT)**

EUT #	Serial Number	Sample	HW/SW Version
1	163490000001	Radiated/Conducted	0.0/23.00.001

**1.6 Identification of Accessory equipment**

AE #	Type	Model	HW Version	SW Version	
2	External LTE Antenna	T-AT305	NA	NA	700MHz – 2.4GHz

**1.7 Environmental conditions during Test**

The following environmental conditions were maintained during the course of testing:

Ambient Temperature: 20-25°C

Relative Humidity: 40-60%

**1.8 Dates of Testing**

09/20/2015 – 9/30/2015

Date of Report: 01-20-2016

#### **4 Subject of Investigation**

The objective of the measurements applied by CETECOM Inc. was to establish compliance of the EUT as described under Ch. 3 of this Test Report, with the applicable criteria specified in

47 CFR Part 2: Title 47 of the Code of Federal Regulations: Chapter I-Federal Communications Commission Frequency allocations and radio treaty matters; general rules and regulations.

47 CFR Part 27: Title 47 of the Code of Federal Regulations: Chapter I-Federal Communications Commission subchapter B- common carrier services; Part 27-Miscellaneous wireless communication services

RSS-GEN- Issue 4: General Requirements and Information for the Certification of Radio Apparatus

RSS-139- Issue 3: Spectrum management and telecommunication policy- Radio Standards

Specifications- Advance wireless services equipment operating in the bands 1710-1755MHz and 2110-2155MHz

RSS-130, Issue 1: Mobile Broadband Services (MBS) Equipment Operating in the Frequency Bands 698-756 MHz and 777-787 MHz

This test report is to support a request for new equipment authorization under the FCC ID: RI7LE866SV1 and IC ID: 5131A-LE866SV1

Date of Report: 01-20-2016

## 5 Summary of Measurement Results

### 5.1 LTE Band 4 (1700 MHz):

Specifications	Test Case	Temperature and Voltage Conditions	Mode	Pass	Fail	NA	NP	Result
§2.1046 §27.50(d)(4) RSS-GEN, 6.12 RSS-139(6.5)	RF Output Power	Nominal	QPSK	■	□	□	□	Complies
			16 QAM					
§27.50(d)(5) RSS-GEN, 6.12 RSS-139(6.5)	Peak-to-average Ratio	Nominal	QPSK	■	□	□	□	Complies
			16 QAM					
§2.1055 §27.54 RSS-GEN, 6.11 RSS-139(6.4)	Frequency Stability	Extreme	QPSK	■	□	□	□	Complies
			16 QAM					
§2.1049 §27.53(h) RSS-Gen, 6.6	Occupied Bandwidth	Nominal	QPSK	■	□	□	□	Complies
			16 QAM					
§2.1051 §27.53(h) RSS-GEN, 6.13 RSS-139 6.6	Band Edge Compliance	Nominal	QPSK	■	□	□	□	Complies
			16 QAM					
§2.1053 §27.53(h) RSS-GEN, 6.13 RSS-139 6.6	Unwanted Emissions	Nominal	QPSK	■	□	□	□	Complies
			16 QAM					

NA= Not Applicable; NP= Not Performed.

### 5.2 LTE Band 4 worst case condition for RF average conducted power and PAR

Test Case	Mode	Condition
RF Output Power	QPSK	23.37dBm@low channel 1RB
	16 QAM	22.61dBm@low channel 1RB
Peak-to-average Ratio	QPSK	4.72dB@high or low channel 100RB 20MHz BW
	16 QAM	5.66dB@high channel 50RB 10MHz BW

Date of Report: 01-20-2016

**5.3 LTE Band 13 (700 MHz):**

Specifications	Test Case	Temperature and Voltage Conditions	Mode	Pass	Fail	NA	NP	Result
§2.1046 §27.50(h)(2) RSS-GEN, 6.12 RSS-130(4.4)	RF Output Power	Nominal	QPSK	■	□	□	□	Complies
			16 QAM					
27.50(d)(5) RSS-GEN, 6.12 RSS-130(4.4)	Peak-to-average Ratio	Nominal	QPSK	■	□	□	□	Complies
			16 QAM					
§2.1055 §27.54 RSS-GEN, 6.11 RSS-130 (4.3)	Frequency Stability	Extreme	QPSK	■	□	□	□	Complies
			16 QAM					
§2.1049 §27.53(h) RSS-GEN, 6.6	Occupied Bandwidth	Nominal	QPSK	■	□	□	□	Complies
			16 QAM					
§2.1051 §27.53(h) RSS-GEN, 6.13	Band Edge Compliance	Nominal	QPSK	■	□	□	□	Complies
			16 QAM					
§2.1053 §27.53(h) RSS-GEN, 6.13 RSS-130 (4.6)	Unwanted Emissions	Nominal	QPSK	■	□	□	□	Complies
			16 QAM					

Note: NA= Not Applicable; NP= Not Performed.

**5.4 LTE Band 13 worst case condition for RF average conducted power and PAR**

Test Case	Mode	Condition
RF Output Power	QPSK	23.62dBm@low channel 1RB
	16 QAM	22.58dBm@high channel 1RB
Peak-to-average Ratio	QPSK	4.73dB @ 25RB, 5MHz BW
	16 QAM	5.75dB @ 25RB, 5MHz BW

Date of Report: 01-20-2016

## 6 Measurements

### 6.1 Measurement Uncertainty

For Power Output, Peak-Average Ratio, Band Edge Unwanted Emissions and Radiated Spurious Emissions the measurement uncertainty has been determined to:

	Uncertainty in dB radiated <30MHz	Uncertainty in in dB radiated 30MHz - 1GHz	Uncertainty in dB radiated > 1GHz	Uncertainty in dB Conducted measurement
standard deviation k=1	2.48	1.94	2.16	0.64
95% confidence interval in dB	4.86	3.79	4.24	1.25
95% confidence interval in dB in delta to Result	+/-2.5 dB	+/-2.0 dB	+/- 2.3dB	+/-0.7dB

Assesment from 3-12-2014 including contributions (as applicable) for NSA of chamber, VSWR of chamber, Uncertainty contribution of the antennas, Uncertainty contributions of ESU40, Uncertainty contribution of non-conducting table and all mismatch uncertainties of the involved equipment.

For OBW and Frequency Stability the measurement uncertainty is only determined by the FSU40 receiver. Maximum uncertainty is 2Hz.

Date of Report: 01-20-2016

## 6.2 RF Power Output

### 6.2.1 References

- FCC: CFR Part 2.1046, CFR Part 22.913, CFR Part 24.232, CFR Part 27.50
- IC: RSS-Gen Section 6.12; RSS-139 Section 6.5, RSS-130 Section 4.4
- 971168 D01 Power Meas License Digital Systems v02r02

### 6.2.2 Measurement Requirements:

#### 6.2.2.1 **FCC 2.1046: RF power output.**

Power output shall be measured at the RF output terminals when the transmitter is adjusted in accordance with the tune-up procedure to give the values of current and voltage on circuit elements as specified. The electrical characteristics of the radio frequency load attached to the output terminals when this test is made shall be stated.

#### 6.2.2.2 **RSS-Gen 6.12: RF power output.**

Transmitter output power measurements shall be carried out before the unwanted emissions test. The transmitter output power value, obtained from this test, serves as the reference level used to determine the unwanted emissions.

### 6.2.3 Limits:

#### 6.2.3.1 **Band4 (1700 MHz)**

FCC Part 27.50 (d) (4) (6) ) & RSS-139 Section 6.4

**FCC: Average EIRP < 30 dBm (1W)**

**IC: Average EIRP < 30 dBm (1W)**

#### 6.2.3.2 **Band13 (777-787 MHz)**

FCC Part 27.50 (b) (10)

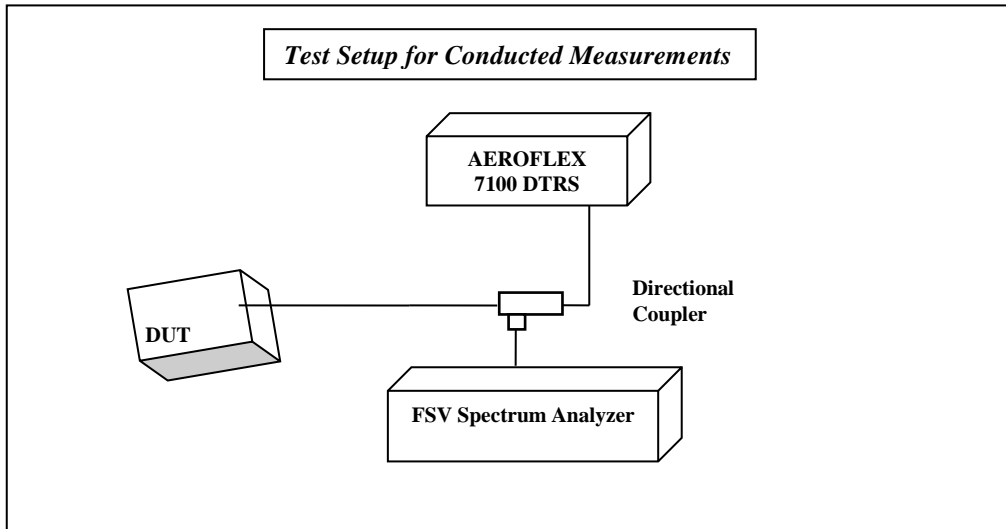

RSS-130 Section 4.4

**FCC: Average ERP < 34.8 dBm (3W)**

**IC: Average EIRP < 37 dBm (5W)**

Date of Report: 01-20-2016

**6.2.4 Measurement Procedure:**

The DUT is using as much total output power as permissible according to the standards independent of physical bandwidth used. In order to achieve this goal the amplifier gain or baseband signal level inside the DUT is dynamically adjusted when the bandwidth changes.

Different modulations have different peak to average ratios so 16QAM and QPSK have been tested.

Testing for Low, Mid and High channel is the basic procedure from all radio base standards to catch frequency response over the band.

The power measurements were carried out with the R&S Spectrum Analyzer FSV13. It returns peak and average results. Internally it uses a time domain power measurement function for Peak and RMS power. The measurements are including a range of at least 25LTE frames to ensure stable and reproduceable results for peak and average.

The gains have been taken from the customer documentation. RF cable losses for various LTE bands are calculated and entered into the RF config menu in FSV and as RF level offset for spectrum analyser measurements, as well as into attenuation for DRT signalling unit.

LTE Band	Frequency at center, MHz	Attenuation, DRT, dB	Coupled, FSV, dB
Band 13	782	1.12	10.0
Band 4	1732.5	1.39	10.9

**6.2.4.1 Cable Loss:**

The test setup losses between the DUT and measurement equipment, were verified and compensated, taken as reference the RF connector located on the module board

Date of Report: 01-20-2016

#### **6.2.4.2 Test Conditions:**

Tnom: 22°C; Vnom: 3.8 V

#### **6.2.5 Test Results**

##### **6.2.5.1 Conducted Output Power LTE Band 4 full RB:**

Note: PAR values is given for information only.

### **6.2.6 Test Verdict**

Pass

## **6.3 PEAK-AVERAGE Ratio**

### **6.3.1 References**

FCC CFR 47 §24.232 (D); FCC CFR 47 §27.50 (D) (5)  
RSS-139(6.5) RSS-130 (4.4)

### **6.3.2 Limits:**

Power measurements for transmissions by stations authorized under this section may be made either in accordance with a Commission-approved average power technique or in compliance with paragraph (e) of this section. In both instances, equipment employed must be authorized in accordance with the provisions of §24.51. In measuring transmissions in this band using an average power technique, the peak-to-average ratio (PAR) of the transmission may not exceed 13 dB.

### **6.3.3 Results:**

The results are contained in the tables of the previous section under column 'PAR'.

### **6.3.4 Verdict:**

Pass

Date of Report: 01-20-2016

## **6.4 Occupied Bandwidth**

### **6.4.1 References**

FCC: CFR Part 2.1053, CFR Part 27.53 (g),  
IC: RSS-Gen Section 6.6

### **6.4.2 Limits**

The channel bandwidth shall be equal to or greater than 1MHz and shall be reported by the certification applicant.

### **6.4.3 Measurement Requirements:**

The occupied bandwidth in lieu of 99% bandwidth, that is the frequency bandwidth such that, below its lower and above its upper frequency limits, the mean powers radiated are each equal to 0.5 percent of the total mean power radiated by a given emission.

The 26 dB bandwidth is the width of the emission signal between 2 points, one below the carrier center frequency and one above the carrier frequency, outside of which all emissions are attenuated by 26 dB below the transmitter power.

### **6.4.4 Test Method:**

Measurements for Occupied bandwidth (OBW) are done according to the FCC KDB procedure 971168 D01 Power Meas License Digital Systems v02r02 Section 4.

Section 4.1 for 26dB bandwidth

Section 4.2 for 99% OBW

Date of Report: 01-20-2016

## **6.5 Frequency Stability**

### **6.5.1 References**

FCC: CFR Part 2.1055, CFR Part 22.355, CFR Part 24.235, CFR Part 27.54

IC: RSS-Gen Section 6.11; RSS-139 Section 6.4; RSS-130 Section 4.3

### **6.5.2 Measurement requirements:**

Frequency stability is a measure of frequency drift due to temperature and supply voltage variations with reference to the frequency measured at an appropriate reference temperature and the rated supply voltage. A hand-held device that is only capable of operating using internal batteries shall be tested using a new battery without any further requirement to vary the supply voltage. Alternatively, an external supply voltage can be used and set at the battery nominal voltage, and again at the battery operating end point voltage which shall be specified by the equipment manufacturer.

### **6.5.3 Limits**

**NOTE: Freq. Error (ppm) = Freq. Error (Hz) / Declared Freq (MHz)**

**Limit is +/- 1.5ppm for base stations**

**Limit is +/- 2.5ppm for mobile devices**

### **For Hand carried battery powered equipment:**

According to the JTC standard the frequency stability of the carrier shall be accurate to within 0.1 ppm of the received frequency from the base station. This accuracy is sufficient to meet Sec. 24.235/22.355 Frequency Stability. The frequency stability shall be sufficient to ensure that the fundamental emission stays within the authorized frequency block.

As this transceiver is considered "Hand carried, battery powered equipment" Section 2.1055(d)(2) applies. This requires that the lower voltage for frequency stability testing be specified by the manufacturer. This transceiver is specified to operate with an input voltage of between 3.4VDC and 4.2VDC, with a nominal voltage of 3.8VDC. Operation above or below these voltage limits is prohibited by transceiver software in order to prevent improper operation as well as to protect components from overstress. These voltages represent a tolerance of +10.5%. For the purposes of measuring frequency stability these voltage limits are to be used.

Date of Report: 01-20-2016

**6.5.4 Summary Test Data:**

Band	Temp, °C	V, dc	Upper Freq, MHz	Lower Freq, MHz	Nominal Freq, MHz	Center Freq Calc, MHz	Deviation in ppm

13	60	4.2	782.09261	781.90686	782	781.99974	0.33

**6.5.5 Test Notes:**

No mode of operation with a CW signal was available to measure the frequency stability so the measurement was taken according to the following methods:

1. For optimum comparison to nominal frequency 5 MHz channelisation with the center Resource Block, (RB), of the 25 RB has been applied.
2. 5000 sweep points, a span of 500 kHz and an RBW of 1kHz have been chosen for maximum resolution of the steep slopes of the signal.
3. Two cursors have been set a identical level at the steepest part of the slopes on either side of the signal.
4. The actual center frequency has been calculated as  $f_c = f_{low} + (f_{high} - f_{low}) / 2$
5. The measurement has been carried out for the extremes of voltage and temperature specified for the EUT.
6. The spectrum analyzer FSV has been used as a frequency reference (10MHz) by coupling it to the Aeroflex call box and setting the call box to external reference.

## 6.6 Band Edge (Conducted) / Transmitter Unwanted Emissions

### 6.6.1 References

FCC: CFR Part 2.1053, CFR Part 22.917 (a) (b), CFR Part 24.238 (a) (b), CFR Part 27.53 (g), CFR Part 27.53 (f), CFR Part 27.53 (l), CFR Part 90.691(a)

IC: RSS-GEN, 6.13; RSS-139, 6.5; RSS-130, 4.6

### 6.6.2 Limits

Note: The text below is taken from the FCC rules. For all bands the FCC rules are equally or more stringent than the IC rules and are thus be considered as a worst case for both.

#### 6.6.2.1 LTE Band 4

(g) AWS emission limits—(1) General protection levels. Except as otherwise specified below, for operations in the 1710-1755 MHz, 2110-2155 MHz, 2000-2020 MHz, 2180-2200 MHz, 1915-1920 MHz, and 1995-2000 MHz bands, the power of any emission outside a licensee's frequency block shall be attenuated below the transmitter power (P) by at least  $43 + 10 \log_{10}(P)$  dB.

(3) Measurement procedure. (i) Compliance with this provision is based on the use of measurement instrumentation employing a resolution bandwidth of 1 megahertz or greater. However, in the 1 megahertz bands immediately outside and adjacent to the licensee's frequency block, a resolution bandwidth of at least one percent of the emission bandwidth of the fundamental emission of the transmitter may be employed.

#### 6.6.2.2 LTE Band 13

(c) For operations in the 746-758 MHz band and the 776-788 MHz band, the power of any emission outside the licensee's frequency band(s) of operation shall be attenuated below the transmitter power (P) within the licensed band(s) of operation, measured in watts, in accordance with the following: (2) On any frequency outside the 776-788 MHz band, the power of any emission shall be attenuated outside the band below the transmitter power (P) by at least  $43 + 10 \log(P)$  dB. Compliance with this provision is based on the use of measurement instrumentation employing a resolution bandwidth of 100 kilohertz or greater. However, in the 100 kilohertz bands immediately outside and adjacent to a licensee's frequency block, a resolution bandwidth of at least 30 kHz may be employed.

Date of Report: 01-20-2016

### **6.6.3 Measurement Procedure**

Measurements are made according to FCC KDB 971168 D01 v02r02 section 6.

Frequency and marker: lower or upper band edge frequency

Span: 10MHz

RBW: 100kHz below 1GHz, 1MHz above 1GHz

VBW: 3x RBW

Detector: RMS (because the fundamental limits are RMS and nothing stated otherwise according to 971168 D01 Power Meas License Digital Systems v02r01 section 6.0)

Trace: AVG over at least 100 sweeps. TX signal is 100% duty cycle, it transmits continuously

Sweep time: AUTO

**Note 1:** For band 4 in case the result should be above the limit, choose RBW to 1% of the emission bandwidth as measured above and repeat the measurement.

Date of Report: 01-20-2016

### **6.7.3 Measurement requirements:**

#### **6.7.3.1 FCC §2.1057 Frequency spectrum to be investigated.**

(a) In all of the measurements set forth in §§2.1051 and 2.1053, the spectrum shall be investigated from the lowest radio frequency signal generated in the equipment, without going below 9 kHz, up to at least the frequency shown below:

(1) If the equipment operates below 10 GHz: to the tenth harmonic of the highest fundamental frequency or to 40 GHz, whichever is lower.

(2) If the equipment operates at or above 10 GHz and below 30 GHz: to the fifth harmonic of the highest fundamental frequency or to 100 GHz, whichever is lower.

(3) If the equipment operates at or above 30 GHz: to the fifth harmonic of the highest fundamental frequency or to 200 GHz, whichever is lower.

(b) Particular attention should be paid to harmonics and subharmonics of the carrier frequency as well as to those frequencies removed from the carrier by multiples of the oscillator frequency. Radiation at the frequencies of multiplier stages should also be checked.

(c) The amplitude of spurious emissions which are attenuated more than 20 dB below the permissible value need not be reported.

(d) Unless otherwise specified, measurements above 40 GHz shall be performed using a minimum resolution bandwidth of 1 MHz.

#### **6.7.3.2 FCC 2.1053: Field strength of spurious radiation.**

Measurements shall be made to detect spurious emissions that may be radiated directly from the cabinet, control circuits, power leads or intermediate circuit elements under normal conditions of installation and operation. Curves or equivalent data shall be supplied showing the magnitude of each harmonic and other spurious emission.

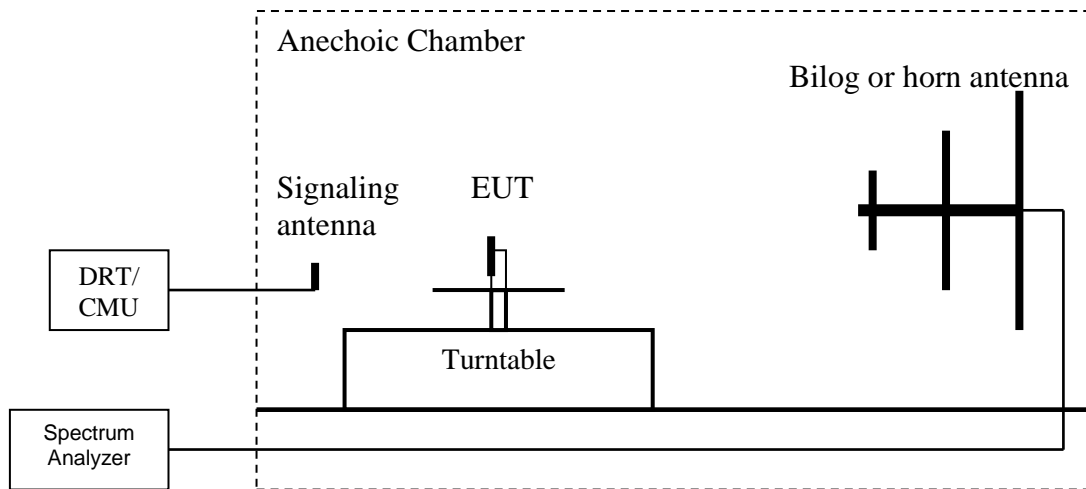

### **6.7.3.3 RSS-Gen 6.13: Transmitter unwanted spurious emissions**

The same parameter, peak power or average power, used for the transmitter output power measurement shall be used for unwanted emission measurements.

The search for unwanted emissions shall be from the lowest frequency internally generated or used in the device (local oscillator, intermediate or carrier frequency), or from 30 MHz, whichever is the lower, to the 5th harmonic of the highest frequency generated without exceeding 40 GHz.

Date of Report: 01-20-2016

Radiated out of band measurement procedure:

**Ref: TIA-603C 2004- 2.2.12 Unwanted emissions: Radiated Spurious**

Connect the equipment as shown in the above diagram with the EUT's antenna in a horizontal orientation.

Adjust the settings of the Digital Radio Communication Tester (DRT) to set the EUT to its maximum power at the required channel.

Set the spectrum analyzer to measure peak hold with the required settings.

Place the measurement antenna in a horizontal orientation. Rotate the EUT 360°. Raise the measurement antenna up to 4 meters in 0.5 meters increments and rotate the EUT 360° at each height to maximize all emissions. Measure and record all spurious emissions (**LVL**) up to the tenth harmonic of the carrier frequency.

Replace the EUT with a horizontally polarized half wave dipole or known gain antenna. The center of the antenna should be at the same location as the center of the EUT's antenna.

Connect the antenna to a signal generator with known output power and record the path loss in dB (**LOSS**). **LOSS** = Generator Output Power (dBm) – Analyzer reading (dBm).

Determine the level of spurious emissions using the following equation:

$$\text{Spurious (dBm)} = \text{LVL (dBm)} + \text{LOSS (dB)}$$

Repeat steps 4, 5 and 6 with all antennas vertically polarized.

Determine the level of spurious emissions using the following equation:

$$\text{Spurious (dBm)} = \text{LVL (dBm)} + \text{LOSS (dB)}$$

Measurements are to be performed with the EUT set to the low, middle and high channel of each frequency band.

(**Note:** Steps 5 and 6 above are performed prior to testing and **LOSS** is recorded by test software. Steps 3, 4 and 7 above are performed with test software.)

Date of Report: 01-20-2016

## 6.7.4 Sample Calculations for Radiated Measurements

### 6.7.4.1 Power Measurements using Substitution Procedure:

The measurement on the Spectrum Analyzer is used as a basis for the Substitution procedure.

The EUT is replaced with a Signal Generator and an antenna. The setting on the Signal Generator is varied until the Spectrum Analyzer displays the original reading. EIRP is calculated as-

$$\text{EIRP (dBm)} = \text{Signal Generator setting (dBm)} - \text{Cable Loss (dB)} + \text{Antenna Gain (dBi)}$$

Example:

Frequency (MHz)	Measured SA (dB $\mu$ V)	Signal Generator setting (dBm)	Antenna Gain (dBi)	Dipole Gain (dBd)	Cable Loss (dB)	EIRP (dBm)
1000	95.5	24.5	6.5	0	3.5	27.5

### 6.7.5 Measurement Survey:

The site is constructed in accordance with ANSI C63.4-2009 requirements and is recognized by the FCC to be in compliance for a 3m site. The spectrum is scanned from 9kHz to the 10th harmonic of the highest frequency generated by the EUT.

Radiated emissions measurements were made only at the upper, middle, and lower carrier frequencies of all supported LTE bands.

The configuration with 1 Resource Block has been chosen as a worst case configuration because 1RB represents the highest power density and thus the highest peak powers of all supported bandwidth configurations. Additionally, configuration with full resource block for each band is also being tested as worst case since greater the physical bandwidth results in larger modulation spectrum residuals. Both QPSK and 16QAM modulations have been tested but only mid channel plots of 16QAM are shown in the report for brevity purposes. It's been observed that both modulations show near identical results.

For low channel the lowest resource block has been chosen and for high channel the highest to represent the worst case in terms of band edge proximity.

For 9kHz-30MHz and 18GHz-26GHz(if applicable) measurement ranges, only mid channel with QPSK modulation is tested. This is because at these extreme frequency ranges, there is a very low probability to have spurious emissions from TX signal, so mid channel is good enough representation to comply at these ranges.

For radiated measurements, all data in this report shows the worst case emissions data between H/V antenna polarizations and for all 3 orthogonal orientations of the EUT.

Unless mentioned otherwise, the emission signals above the limit line in the plots are from the carrier.

<b>Conducted RF Bench:</b>						
Spectrum Analyzer	Rohde und Schwarz	FSU 13	101014	9/2014	2 years	9/2016
Callbox	Aeroflex	7100 DRTS	710000291	n/a		
Directional Coupler	M/A-COM	10dB coupler	96341	na		

Calibration status valid at the time of testing.

Equipment used meets the measurement uncertainty requirements as required per applicable standards for 95% confidence levels.

Test Report #: EMC\_VERIZ\_491\_15001\_FCC27\_LTE\_WWAN\_v1.2

FCCID: RI7LE866SV1  
ICID: 5131A-LE866SV1

Date of Report: 01-20-2016

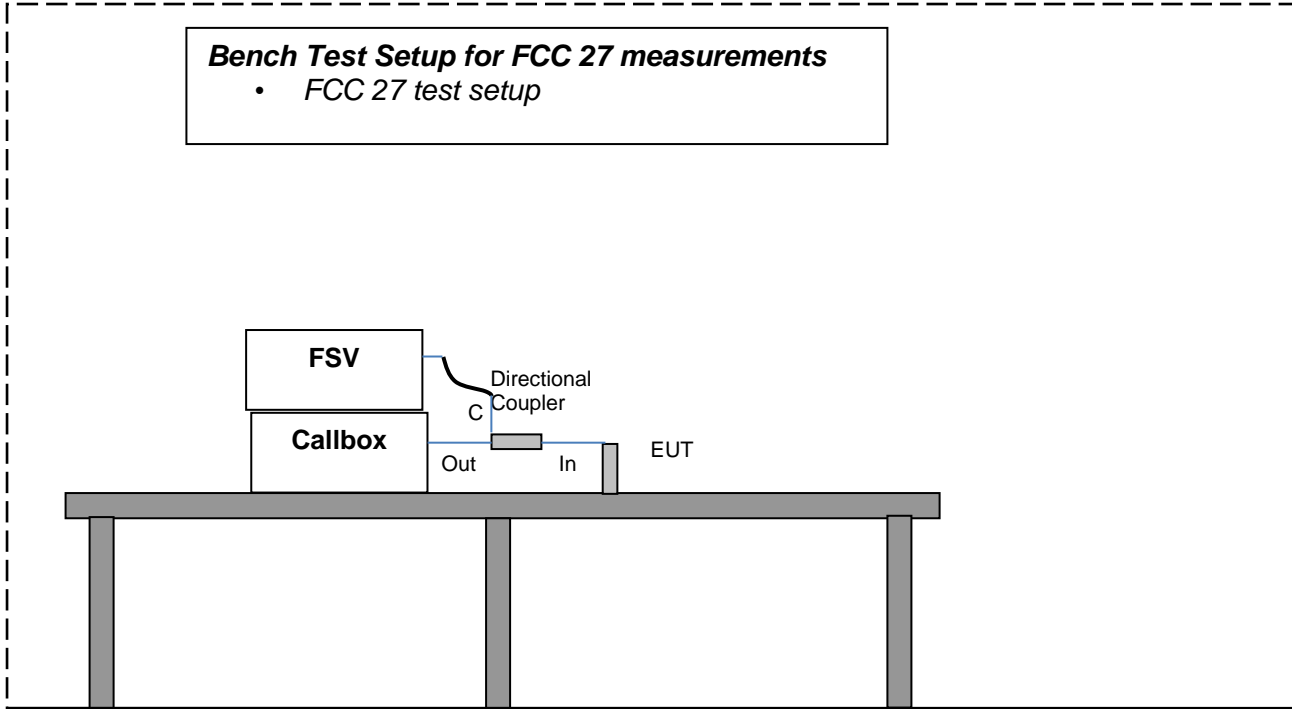

Calibration due dates, unless defined specifically, falls on the last day of the month.  
Items indicated "N/A" for cal status either do not specifically require calibration or is internally characterized before use.
