

SoloQi Power Bank SoloQi SQIPB01

**IMPORTANT USER GUIDES:**

1. The Mag Pad 4 magnets are designed to align the device Qi power transmitter with the wireless receiver of a phone.
2. The Mag Pads must be applied to the **CENTER** of the phone to assure highest charging efficiency. The Qi (wireless) receiver of most phone models is located right at the center of the device.
3. The Mag Pads should adhere **outside your phone, or phone case.** Using it inside might still charge your phone but the magnetic force will be reduced.

**What is Qi? FAQ**

Qi is an open interface standard that defines wireless power transfer using inductive charging over distances of up to 4 cm.

**How does SoloQi work?**

To charge any wireless phone with the SoloQi, switch it on, place your phone on it and charge using the inductive Qi coil located under the front logo of the device. It will charge your phone through almost any phone case and most likely the one you're using now, including Apple's rubber and leather phone cases, and most cases of other leading brands.

**How to share the power with others?**

To share the Qi power with friends simply get a supply of Mag Pads at our online store and we'll ship it to you.

**What is the battery performance?**

To keep the device as light as a feather, the SoloQi battery is the lightest in the 2750mAh series. With most phone models it extends battery life by about 40% to 50% (less with the plus models) but that's the catch. You can fast charge your SoloQi battery almost anywhere you go, with or without a cable. Making it the ultimate charging experience for both stationary use and mobility.

**The Fun Part!**

Easy as SNAP & CHARGE, the Mag Pads comes with an adhesively powerful 3M sticker to secure the best charging alignment of your phone wireless receiver with our Qi charging transmitter. No more fumbling with cables.

**It feels like driving an Autonomous car hands-free.**

**1. Adhere the pad to the center of the phone, or phone case**

**NOTE: If you're using a metal sticker on your phone case, you'll need to remove it not to block the Qi wireless signal.**

**2. Charge and use your phone vertically or horizontally**

**3. Use the Battery Reserve Switch to charge your phone when needed**

Click once to turn **ON**  
Twice to switch **OFF**

**4. Use any of the 2 fast charging inputs to recharge your device, with or without your phone attached.**

USB C Input      USB A Input

**Qi Dock Pre-order it now**  
Coming Next **Car | Desk** on our website

SoloQi is a combination of **three devices** mashed into one.

1. Battery Case you can use with almost **any phone case.**
2. A smarter wireless pad that you can use **without a cable on the go.**
3. A Kickstand to use your phone **hands-free while charging,** in both vertical and horizontal screen positions.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

Caution: Any changes or modifications to this device not explicitly approved by manufacturer could void your authority to operate this equipment.
