Foreword

The following information is submitted for consideration in obtaining Equipment Grant of Certification for Scanning Receiver operating under 47CFR Paragraph 15B (15.121) and Industry Canada RSS-135 Issue 2, and RSS-GEN Issue 5. The receiver provides operational capability in segmented and defined frequency bands between 118-470 MHz.

Name of Applicant:	RHOTHETA International Inc.	FRN: 0028275022
	8201 Peters Road, Suite 1000	
	Fort Lauderdale, FL 33324	

Model: RT-500-M

FCC ID: 2ASLJ-RT500M IC: 24836-RT500M

Frequency Range: 118-470 MHz

### **Opinion / Interpretation of Results**

#### **Equipment Function**

The RT-500-M is an advanced multi-band Search And Rescue (SAR) radio signal receiving system. The system is designed to aid Search and Rescuer operations in tracking missing craft or active distress beacons. The design provides directional information of a received signal to a Display Control Unit (DCU).

The system is used to rapidly detect and localize a craft, individual or vessel equipped with a Distress Beacon (ELT, PLB, EPIRB, MOB). The AU receives a signal from a commuted quadrant antenna providing a Doppler modulated signal, which is processed in the Antenna Unit to determine the directivity to the source of a signal. The AU provides calculating bearing of received radio signals in the following VHF and UHF ranges:

Frequency Ranges:	Sta	anda	rd-Version		Optional ext	ended	Frequency Range
VHF air band	118,000 MHz	-	123,975 MHz	11	8,000 MHz	-	136,992 MHz
VHF marine band	154,000 MHz	-	162,995 MHz	13	7,000 MHz	-	224,995 MHz
Maritime channels	Channel 00	-	Channel 88				
	(Ship / Coast)		(Ship / Coast)				
UHF air band	240,000 MHz	-	245,975 MHz	22	5,000 MHz	-	399,975 MHz
Cospas-Sarsat	400,000 MHz	-	406,092 MHz				
UHF FM band	406,100 MHz	-	410,000 MHz	40	6,100 MHz	-	470,000 MHz

The design offers operation as single frequency or multiple frequency (scanning mode) receiver to locate the Distress Beacon. The single frequency operation is useful when the frequency is known by the responding SAR personnel. The scanning operation is useful when specific frequency of Distress Beacon is unknown by responding search personnel. The RT-500-M works using the Doppler principle and achieves highest precision through the high clockwise / counterclockwise rotation of the directional receiving antenna and compensating for delay time error. The system is watertight (protection IP 67) and may be used under extreme and rough conditions. The system operates from direct current power only and offers no provision to interface with utility power system. The AU interfaces with a DCU and the primary application is installation on a vessel. As requested by the manufacturer and required by regulations, the receiver system was tested for emissions compliance investigating the available configurations with the worst-case data presented. Test results in this report relate only to the products described in this report.

### **Applicant Company information**

Applicants Company	RHOTHETA International Inc.
Applicants Address	8201 Peters Road, Suite 1000, Fort Lauderdale, FL 33324
FCC Identifier	2ASLJ-RT500M
Industry Canada Identifier	24836-RT500M

### **Equipment information**

Product Marketing Name (PMN): The PMN is the name or model number under which the product will be marketed/offered for sale in Canada. If the product has PMN, it must be provided.	RT-500-M
Unique Product Number (UPN): The applicant made up of a maximum of 11 alphanumeric characters (A-Z, 0-9), assigns the UPN.	RT-500-M
Hardware Version Identification Number (HVIN): The HVIN identifies hardware specifications of a product version. The HVIN replaces the ISED Model Number in the legacy E- filing System. An HVIN is required for all products for certification applications.	RT-500-M
Host Marketing Name (HMN) (if applicable): The HMN is the name or model number of a final product, which contains a certified radio module.	
Test Rule Part(s)	47CFR 15B, 15.109, 15.121, RSS-135, RSS-GEN
Test Frequency Range	118-470 MHz
Project Number	190211A
Submission Type	FCC and ISED Certification

#### **Product Details**

### Application for Certification, 47CFR 2.1033 (b)

- Manufacturer: RHOTHETA International Inc.
   8201 Peters Road, Suite 1000 Fort Lauderdale, FL 33324
- (2) Identification: Model: RT-500-MFCC ID: 2ASLJ-RT500MIC: 24836-RT500M
- (3) Instruction Book: Refer to Exhibit for Instruction Manual.
- (4) Description of Circuit Functions: Refer to Exhibit of Operational Description.
- (5) Block Diagram with Frequencies: Refer to Exhibit of Operational Description.
- (6) Report of Measurements: Report of measurements follows in this Report.
- (7) Photographs: Construction, Component Placement, etc.: Refer to Exhibit for photographs of equipment.
- (8) List of Peripheral Equipment Necessary for operation. The equipment operates from direct current power received from installation vehicle. The EUT provides serial interface for proprietary communications with DCU (Graphical User Interface) equipment. During testing, the EUT was powered from direct current power source.
- (9) Transition Provisions of 47CFR 15.37 are not requested
- (10) Applications for the certification of scanning receivers shall include a statement describing the methods used to comply with the design requirements of all parts of §15.121 of this chapter. The application must specifically include a statement assessing the vulnerability of the equipment to possible modification and describing the design features that prevent the modification of the equipment by the user to receive transmissions from the Cellular Radiotelephone Service. The application must also demonstrate compliance with the signal rejection requirement of §15.121 of this chapter, including details on the measurement procedures used to demonstrate compliance. The required attestation statements are provided in other exhibits.
- (11) Not Applicable. The EUT does not operate in the 59 64 GHz frequency band.
- (12) The equipment is not software defined and this section is not applicable.
- (13) Not Applicable. The equipment does not operate as U-NII device.
- (14) Contain at least one drawing or photograph showing the test set-up for each of the required types of tests applicable to the device for which certification is requested. These drawings or photographs must show enough detail to confirm other information contained in the test report. Any photographs used must be focused originals without glare or dark spots and must clearly show the test configuration used. This information is provided in this report and Test Setup Exhibits provided with the application filing.

Revision 1	File: Rhotheta RT500M TstRpt 1902	211A Page 8 of 24

### Applicable Standards & Test Procedures

The following information is submitted in accordance with e-CFR dated February 11, 2019, Part 2, Subpart J, Part 15, Subpart 15B, Industry Canada RSS-GEN Issue 5, and RSS-135 Issue 2. Test procedures used are the established Methods of Measurement of Radio-Noise Emissions as described in ANSI C63.4-2014, 47CFR 15.31, 15.33. 15.35, RSS-135 Issue 2, and RSS-GEN Issue 5.

### **Statement of Modifications and Deviations**

No modifications to the EUT were required for the unit to demonstrate compliance with the 47CFR Part 15B, Industry Canada RSS-135 Issue 2, and RSS-Gen Issue 5 emissions requirements. There were no deviations or modifications to the specifications.

### **Equipment Testing Procedures**

### AC Line Conducted Emission Test Procedure

The EUT operates on direct current power only provided by installation craft. Therefore, no AC line conducted emission testing was required or performed.

### Radiated Emission Test Procedure

Radiated emission testing was performed as required on a CISPR 16-1-4 compliant OATS and as specified in ANSI C63.4-2014. The EUT was placed on a rotating 0.9 x 1.2-meter platform, elevated as required above the ground plane at a 3 meters distance from the FSM antenna. The table permitted orientation of the EUT in each of three orthogonal axis positions as necessary. EMI energy was maximized by equipment placement, raising and lowering the FSM antenna, changing the antenna polarization, and by rotating the turntable. Each emission was maximized before data was taken using a spectrum analyzer. The frequency spectrum from 9 kHz to 5,000 MHz was searched for during preliminary investigation. Refer to diagrams one and two showing typical test arrangement and photographs in the test setup exhibits for specific EUT placement during testing.

Rogers Labs, Inc.RHOTHETA International Inc.S/N: 007814405 W. 259th TerraceModel: RT-500-MFCC ID: 2ASLJ-RT500MLouisburg, KS 66053Test: 190211AIC: 24836-RT500MPhone/Fax: (913) 837-3214Test to: 47CFR, 15(b), RSS-135Date: November 22, 2019Revision 1File: Rhotheta RT500M TstRpt 190211APage 9 of 24

- 1. Interconnecting cables that hang closer than 40 cm to the ground plane shall be folded back and forth in the center, forming a bundle 30 cm to 40 cm long.
- 2. I/O cables that are not connected to a peripheral shall be bundled in the center. The end of the cable may be terminated if required using the correct terminating impedance. The total length shall not exceed 1 m.
- 3. If LISNs are kept in the test setup for radiated emissions, it is preferred that they be installed under the ground plane with the receptacle flush with the ground plane.
- 4. Cables of hand-operated devices, such as keyboards, mice, and so on, shall be placed as for normal use.
- 5. Non-EUT components of EUT system being tested.
- 6. Rear of EUT, including peripherals, shall all be aligned and flush with rear of tabletop (possibly center of table for transmitter equipment).
- 7. No vertical conducting plane used.
- 8. Power cords drape to the floor and are routed over to receptacle.

### **Units of Measurements**

Conducted EMI	Data 1	presented in	dBuV: d	B referenced to	one microvolt
	Data	presenteu m	uDμ , u	D Telefenceu to	one microvon

Radiated EMI Data presented in dBµV/m; dB referenced to one microvolt per meter

Note: The limit is expressed for a measurement in  $dB\mu V/m$  when the measurement is taken at a distance of 3 or 10 meters. Data taken for this report was taken at distance of 3 meters. Sample calculation demonstrates corrected field strength reading for Open Area Test Site using the measurement reading and correcting for receive antenna factor, cable losses, and amplifier gains.

Sample Calculation:

RFS = Radiated Field Strength, FSM = Field Strength MeasuredA.F. = Receive antenna factor, Losses = attenuators/cable losses, Gain = amplification gains $RFS (dB\mu V/m @ 3m) = FSM (dB\mu V) + A.F. (dB/m) + Losses (dB) - Gain (dB)$ 

### **Environmental Conditions**

Ambient Temperature	20.8° C

### **Emission Measurements**

### AC Line Conducted EMI Procedure

The EUT operates on direct current power only provided by the aircraft installation. Therefore, no AC line conducted emission testing was required or performed.

#### Radiated EMI Procedure

Test procedures of ANSI C63.4-2014 were used during radiated emissions testing. For testing purposes, the EUT was arranged as presented in the applicable configurations as diagramed above and operated through manufacturer defined modes as presented. Preliminary testing was performed in a screen room with the EUT positioned 1 meter from the FSM. Radiated emissions measurements were performed to identify the frequencies, which produced the highest emissions. Plots were made of the frequency spectrum during preliminary testing. The EUT and cable locations were noted and reconfigured at the Open Area Test Site (OATS). The radiated emissions were then maximized at the OATS location before final radiated emission measurements were performed. Final data was taken with the EUT located at the OATS at distance of 3 meters between the EUT and the receiving antenna. The frequency spectrum from 9 kHz to 5,000 MHz was searched for radiated emissions. Measured emission levels were maximized by EUT placement on the table, changing cable location, rotating the turntable through 360 degrees, varying the antenna height between 1 and 4 meters above the ground plane and changing antenna position between horizontal and vertical polarization. Antennas used were Loop, Biconical, Broadband Biconilog, Log Periodic, and Double Ridge or Pyramidal Horns and mixers above 1 GHz.

Refer to figures one through four showing plots of Equipment Under Test radiated emissions taken in the screen room.

#### Table 1 Radiated Emissions Data from EUT test configuration

Other emissions present had amplitudes at least 20 dB below the limit. Peak and Quasi-Peak amplitude emissions are recorded above for frequency range below 1000 MHz. Peak and Average amplitude emissions are recorded above for frequency range above 1000 MHz.

### **Summary of Results**

#### AC Line Conducted Emissions Results

The EUT operates on direct current power only provided by installation craft. Therefore, no AC line conducted emission testing was required or performed.

### Radiated Emissions Results

The EUT demonstrated compliance with the radiated emissions requirements of 47CFR Part 15B, RSS-GEN Issue 5, and other applicable Class B emissions requirements. The worse-case EUT configuration demonstrated a minimum margin of -17.8 dB below the 47CFR Part 15B and RSS-GEN Issue 5 Class B requirements. Other emissions were present with amplitudes at least 20 dB below the limit and worse-case amplitudes recorded.

### Annex A Measurement Uncertainty Calculations

The measurement uncertainty was calculated for all measurements listed in this test report according To CISPR 16–4. Result of measurement uncertainty calculations are recorded below. Component and process variability of production devices similar to those tested may result in additional deviations. The manufacturer has the sole responsibility of continued compliance.

Measurement	Expanded Measurement Uncertainty U <sub>(lab)</sub>
3 Meter Horizontal 0.009-1000 MHz Measurements	4.16
3 Meter Vertical 0.009-1000 MHz Measurements	4.33
3 Meter Measurements 1-18 GHz	5.14

### Annex C Rogers Qualifications

#### Scot D. Rogers, Engineer

#### Rogers Labs, Inc.

Mr. Rogers has 32 years' experience in the field of electronics. Engineering experience includes six years in the automated controls industry and remaining years working with the design, development and testing of radio communications and electronic equipment.

#### Positions Held

Systems Engineer:	A/C Controls Mfg. Co., Inc. 6 Years
Electrical Engineer:	Rogers Consulting Labs, Inc. 5 Years
Electrical Engineer:	Rogers Labs, Inc. Current

#### Educational Background

- 1) Bachelor of Science Degree in Electrical Engineering from Kansas State University.
- 2) Bachelor of Science Degree in Business Administration Kansas State University.
- Several Specialized Training courses and seminars pertaining to Microprocessors and Software programming.
