## DFS client device channel plan and software operational declaration

Date: 2019-03-27

We, mPlus Technology Co., Ltd.., declare that the device, FCC ID: 2ASPU-HERA51 Model Name: HERA51, does not have Ad Hoc on "non-US frequencies" and/or on "DFS frequencies". Also, the client software and associated drivers will not initiate any transmission on DFS frequencies without initiation by a master. This includes restriction on transmissions for beacons and support for ad-hoc peer-to-peer modes.

Below is the channel / frequency plan for the device

СН	1	2	3	4	5	6	7	8	9	10	11

Frequency (MHz)	5745	5755	5765	5775	5785	5795	5805	5825
Scan Type	Active							

Also, on DFS channels, the WLAN driver in the device operates under the control of an AP at all times, except when in ad-hoc mode on US non-DFS channels. The device passively scans DFS frequencies until a master device is detected. The control of this functionality is not accessible to anyone under any conditions. Furthermore, the firmware is protected by a special signature and CRC checksum. Signature and CRC checksum will be calculated and verified before
