## RF Exposure evaluation

FCC ID: 2ASRB-P1000

According to 447498 D01 General RF Exposure Guidance v05 The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances  $\leq$  50 mm are determined by: [(max. power of channel, including tune-up tolerance, mW)/(min. test separation distance, mm)]  $\cdot$  [ $\sqrt{f(GHz)}$ ]  $\leq$  3.0 for 1-g SAR and  $\leq$  7.5 for 10-g extremity SAR, where

- f(GHz) is the RF channel transmit frequency in GHz
- ${}^{\bullet}$  Power and distance are rounded to the nearest mW and mm before calculation

Worse case is as below:

For BLE: [2480MHz 5.48dBm (3.532mW) output power]

 $(3.532 \text{mW} / 5 \text{mm}) \cdot [\sqrt{2.80} (\text{GHz})] = 1.112 < 3.0 \text{ for } 1-\text{g SAR}$ 

For BT: [2480MHz 5.49dBm (3.5399mW) output power] (3.5399mW /5mm) • [ $\sqrt{2.480}$  (GHz)]= 1.115 <3.0 for 1-g

SAR Then SAR evaluation is not required
