

Maximum Permissible Exposure Report

1. Product Information

Maximum Permissible Exposure Report					
Product Information					
FCC ID	: 2AT3F-T399L	ST LCS TO	ST LCS TO		
EUT	: VEHICLE GPS TRAC				
-					
Test Model	: T399L				
Additional Model No.	: T399L-ER, T399L-EA, MD833H, TA255L, TA	T633L, P99L, P99E, MD5 255E	500S, MD600,		
Model Declaration	: PCB board, structure a no additional models w	and internal of these mode vere tested	l(s) are the same, So		
Power Supply	: Input Voltage: 11.4-90 Battery: DC 3.7V, 400		IST LOS Testing Lab		
Hardware Version	: V1.6		Contract of the second s		
Software Version	: V246				
3G					
Support Band	: WCDMA Band II (U WCDMA Band IV (U WCDMA Band V (U	J.SBand)			
Release Version	: R8				
Type Of Modulation	: QPSK,64QAM	山田检测限的	Lan the Miller		
Antenna Description	: FPC Antenna 1.2dBi(max.) For WCE 2.2dBi(max.) For WCE 0.5dBi(max.) For WCE	MA Band IV	LCS Testing		
LTE					
Support Band	E-UTRA Band 2(U.) E-UTRA Band 4(U.)	SBand)			
LTE Release Version	: R10				
Type Of Modulation	: QPSK/64QAM	an the	and the		
Antenna Description	FPC Antenna 1.2dBi(max.) For E-UT 1.0dBi(max.) For E-UT 0.6dBi(max.) For E-UT	RA Band 4	LCS Testing Lab		
Power Class	: Class 3				
Exposure category	General population/un	controlled environment			
EUT Type	: Production Unit				
Device Type	: Mobile Devices				

2. Evaluation Method

Systems operating under the provisions of FCC 47 CFR section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

In accordance with 47 CFR FCC Part 2 Subpart J, section 2.1091 this device has been defined as mobile device whereby a distance of 0.2m normally can be maintained between the user and the device, and below RF Permissible Exposure limit shall comply with.

In accordance with KDB447498D01 for Simultaneous transmission MPE test exclusion applies when the sum of the MPE ratios for all simultaneous transmitting antennas incorporated in a host device, based on the calculated/estimated, numerically modelled or measured field strengths or power density, is ≤ 1.0. The MPE ratio of each antenna is determined at the minimum test separation distance required by the operating configurations and exposure conditions of the host device, according to the ratio of field strengths or power density to MPE limit, at the test frequency. Either the maximum peak or spatially averaged results from measurements or numerical simulations may be used to determine the MPE ratios. Spatial averaging does not apply when MPE is estimated using simple calculations based on far-field plane-wave equivalent conditions. The antenna installation and operating requirements for the host device must meet the minimum test separation distances required by all antennas, in both standalone and simultaneous transmission operations, to satisfy compliance.

3. Limit

3.1 Refer Evaluation Method

ANSI C95.1–2019: IEEE Standard for Safety Levels with Respect to Human Exposure to Electric, Magnetic, and Electromagnetic Fields, 0 Hz to 300 GHz FCC KDB publication 447498 D01 General 1 RF Exposure Guidance v06: Mobile and Portable Devices RF Exposure Procedures and Equipment Authorization Policies.

6. Measurement Results

6.1 Standalone MPE Evaluation

As declared by the Applicant, the EUT is a wireless device used in a fix application, at least 20 cm from any body part of the user or nearby persons; from the maximum EUT RF output power, the minimum separation distance, r = 20cm, as well as the gain of the used antenna refer to antenna information, the RF power density can be obtained.

Modulation Type	Output power		Antenna	Antenna	MPE	MPE
	dBm	mW	(dBi)	Gain Gain (dBi) (linear)	(mW/cm2)	Limits (mW/cm2)
WCDMA Band II	24.0	251.1886	1.2	1.3183	0.0659	1.0000
WCDMA Band IV	24.0	251.1886	2.2	1.6596	0.0830	1.0000
WCDMA Band V	24.0	251.1886	0.5	1.1220	0.0561	0.5509
LTE Band 2	23.0	199.5262	1.2	1.3183	0.0524	1.0000
LTE Band 4	23.0	199.5262	1.0	1.2589	0.0500	1.0000
LTE Band 12	24.0	251.1886	0.6	1.1482	0.0574	0.4653

Remark:

1. Output power including tune-up tolerance;

2. Output power was adjust to duty cycle at 100% if measured duty cycle less than 98%;

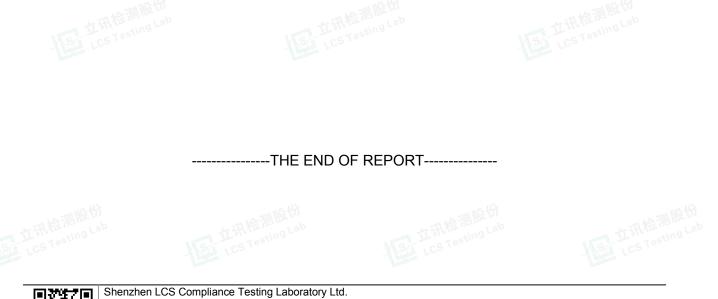

3. MPE evaluate distance is 20cm from user manual provide by manufacturer.

6.2 Simultaneous Transmission MPE Evaluation

The EUT equiped with one antenna. So no need consider simultaneous transmission.

7. Conclusion

The measurement results comply with the FCC Limit per 47 CFR 2.1091 for the uncontrolled RF Exposure of mobile device.
