## RF exposure

According to 447498 D01 General RF Exposure Guidance v06
The 1-g and 10-g SAR test exclusion thresholds for 100 NHz to 6 CHz at test separation distances $\leq$ 50 mm are determined by:
[(max. power of channel, including tune-up tolerance, $m W) /($ min. test separation distance, mm)] $\cdot[\mathrm{Vf}(\mathrm{CHz})] \leq 3.0$ for 1-g SAR and $\leq 7.5$ for 10-g extremity SAR,
Where;
$\mathrm{f}(\mathrm{GHz})$ is the RF channel transmit frequency in CHz
Power and distance are rounded to the nearest mW and mm before calculation
The result is rounded to one decimal place for comparison

## Results

| Frequency (GHz) | Distance <br> $(\mathbf{m m})$ | Max tune-up Average power |  | Calculation <br> value | Exclusion <br> Threshold |
| :---: | :---: | :---: | :---: | :---: | :---: |
|  |  | $\mathbf{( d B m )}$ | $\mathbf{( m W )}$ |  | $\leq 3.0$ |
| 2.432 | 5 | 0 | 1.00 | 0.31 | $\leq 3.0$ |
| 2.462 | 5 | 0 | 1.00 | 0.31 | $\leq 3.0$ |
