## 5. Reference Design

### 5.1. UART Interface Design

For devices with 5V power supply, you can directly connect the device UART port with module UART port according to the illustration.

### 5.2. Power Supply Requirement

It is recommended to supply the module with power higher than 400mA to ensure enough power supply to the module and avoid power down during data.

You can change the spec of capacitor at C1 according to actual hardware design to fit the needs for ripple control (recommended to apply capacitance higher than 22μF).
