

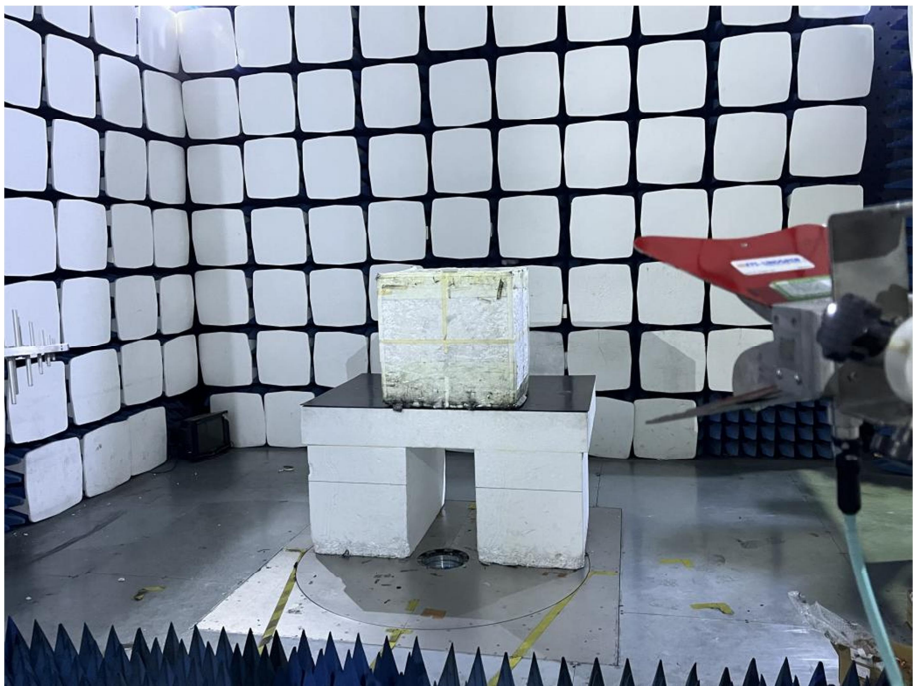

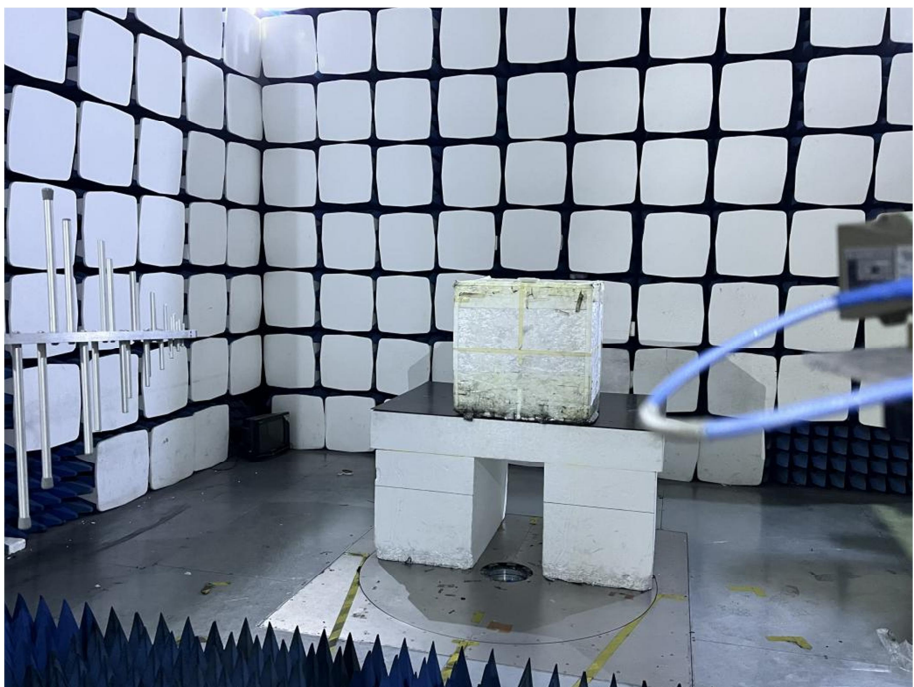

EXHIBIT 4 - TEST SETUP PHOTOGRAPHS

Radiation Emission Test Setup (Below 30MHz)

Radiation Emission Test Setup (30MHz to 1GHz)

<p>Radiation Emission Test Setup (1GHz to 18GHz)</p>	 A photograph showing a radiation emission test setup. A test item, wrapped in white protective material, is placed on a white, four-legged stand. The stand is positioned on a circular turntable in the center of an anechoic chamber. The walls of the chamber are covered with white, square-shaped electromagnetic absorbers. A red horn antenna is visible on the right side, pointing towards the test item. The floor of the chamber is covered with blue, pyramid-shaped absorbers.
<p>Radiation Emission Test Setup (Above 18GHz)</p>	 A photograph showing a radiation emission test setup for frequencies above 18GHz. The test item and stand are the same as in the previous image. However, the red horn antenna is replaced by a blue probe antenna, which is positioned to the right of the stand. The rest of the chamber setup, including the white absorbers and blue floor absorbers, remains the same.
