Г

#### 1 Certificate of Conformity

| Product:   | Wireless Charger                             |
|------------|--|
| Brand:     | APTIV  |
| Model:     | AR 15W WIRELESS CHARGER                      |
| Applicant: | Aptiv Electrical Centers (Shanghai) Co.,Ltd. |
| Test Date: | Nov.30 to Dec.27,2021                        |
| Standards: | 47 CFR FCC Part 1,1.1307(b) and 1.1310       |
|            | KDB 680106 D01v03                            |

The above equipment has been tested by **BUREAU VERITAS ADT (Shanghai) Corporation**, and found compliance with the requirement of the above standards. The test record, data evaluation & Equipment Under Test (EUT) configurations represented herein are true and accurate accounts of the measurements of the sample's EMC characteristics under the conditions specified in this report.

## 3 RF Exposure

### 3.1 Limits For Maximum Permissible Exposure (MPE)

(1) Table 1 to § 1.1310(e)(1) sets forth limits for Maximum Permissible Exposure (MPE) to radiofrequency electromagnetic fields.

| Frequency range<br>(MHz) | Electric field strength<br>(V/m)                         | Magnetic field strength<br>(A/m) | Power density<br>(mW/cm 2) | Averaging time<br>(minutes) |  |
|--------------------------|--|----------------------------------|----------------------------|-----------------------------|--|
|                          | (i) Limits for C   | Occupational/Controlled Ex       | posure                     |                             |  |
| 0.3-3.0                  | 614  | 1.63                             | *(100)                     | ≤6                          |  |
| 3.0-30                   | 1842/f   | 4.89/f                           | *(900/f <sup>2</sup> )     | <6                          |  |
| 30-300                   | 61.4   | 0.163                            | 1.0                        | <6                          |  |
| 300-1,500                |  |                                  | f/300                      | <6                          |  |
| 1,500-100,000            |  |                                  | 5                          | <6                          |  |
|                          | (ii) Limits for General Population/Uncontrolled Exposure |                                  |                            |                             |  |
| 0.3-1.34                 | 614  | 1.63                             | *(100)                     | <30                         |  |
| 1.34-30                  | 824/f  | 2.19/f                           | *(180/f <sup>2</sup> )     | <30                         |  |
| 30-300                   | 27.5   | 0.073                            | 0.2                        | <30                         |  |
| 300-1,500                |  |                                  | f/1500                     | <30                         |  |
| 1,500-100,000            |  |                                  | 1.0                        | <30                         |  |

f = frequency in MHz. \* = Plane-wave equivalent power density.

(2) Occupational/controlled exposure limits apply in situations in which persons are exposed as a consequence of their employment provided those persons are fully aware of the potential for exposure and can exercise control over their exposure. The phrase fully aware in the context of applying these exposure limits means that an exposed person has received written and/or verbal information fully explaining the potential for RF exposure resulting from his or her employment. With the exception of transient persons, this phrase also means that an exposed person has received appropriate training regarding work practices relating to controlling or mitigating his or her exposure. In situations when an untrained person is transient through a location where occupational/controlled limits apply, he or she must be made aware of the potential for exposure and be supervised by trained personnel pursuant to § 1.1307(b)(2) of this part where use of time averaging is required to ensure compliance with the general population exposure limit. The phrase exercise control means that an exposed person is allowed and also knows how to reduce or avoid exposure by administrative or engineering work practices, such as use of personal protective equipment or time averaging of exposure.

(3) General population/uncontrolled exposure limits apply in situations in which the general public may be exposed, or in which persons who are exposed as a consequence of their employment may not be fully aware of the potential for exposure or cannot exercise control over their exposure.

#### 3.2 Measurement Equipment

| Instrument                   | Manufacturer | Model No. | Fre Range  | Last Cal.  | Due Date   |
|------------------------------|--------------|-----------|------------|------------|------------|
| Field Meter<br>Probe         | WAVECONTROL  | WP400     | 1Hz-400kHz | Aug.01, 21 | Aug.01, 22 |
| Field Meter                  | WAVECONTROL  | SMP2      | -          | Aug.01, 21 | Aug.01, 22 |
| Fully<br>Anechoic<br>Chamber | ETS-LINDGREN | C1FA002   | -          | Jan.17, 20 | Jan.16, 23 |

#### 3.3 Support Units

| Description | Manufacturer | Model No. | Serial No. |
|-------------|--------------|-----------|------------|
| Dummy Load  | N/A          | N/A       | N/A        |

#### 3.4 RF Exposure Evaluation

Desktop WPT testing guidance from FCC KDB 680106 D01v03 is applied. RF Exposure evaluation at 15cm surrounding the device and 20cm above the top surface, Emissions between 50 KHz to 300 KHz should be assessed versus the limits at 300 KHz in table 1 of section 1.1310:1.63A/m and aggregate H-field strengths from all simultaneous transmitting coils.

Power density (S) is calculated according to the formula:

 $S = PG / (4\pi R^2)$ 

Where  $S = power density in mW/cm^2$ 

P = transmit power in mW

G = numeric gain of transmit antenna (numeric gain=Log-1(dB antenna gain/10))

R = distance (cm)

#### 3.5 Test mode

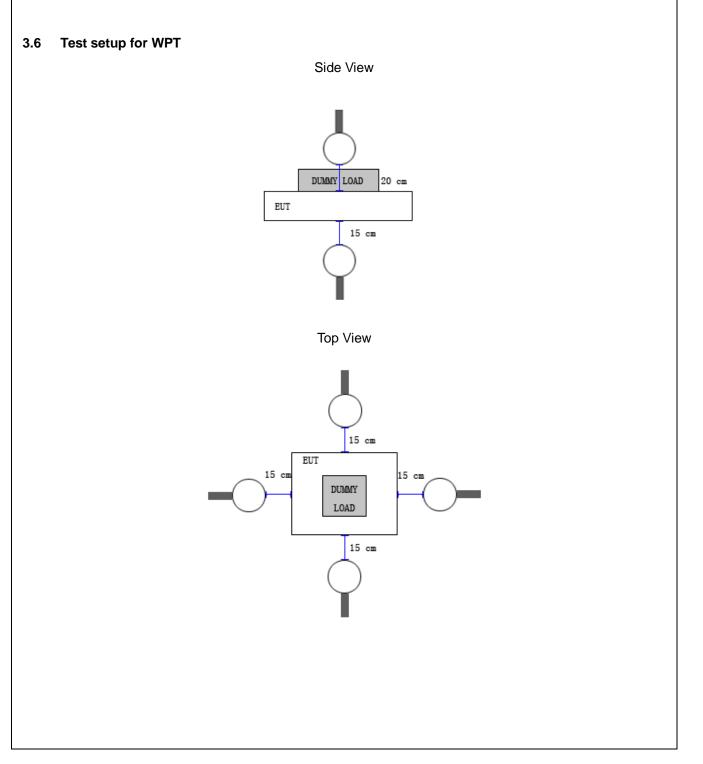

The EUT was tested under the following modes, the final worst mode were marked in boldface and recorded in this report.

WPT

| Test Mode | Test setup configuration | Changing current condition |
|-----------|--------------------------|----------------------------|
|-----------|--------------------------|----------------------------|

| Mode 1 | EUT charging to receiver load | Near 100% battery status |
|--------|-------------------------------|--------------------------|
| Mode 2 | EUT charging to receiver load | 50% battery status       |
| Mode 3 | EUT charging to receiver load | <1% battery status       |
| Mode 4 | EUT charging standby mode     |                          |

## 3.7 Calculation Result of Maximum Permissible Exposure

NFC

| Frequency Band | Max. EIRP<br>Power(dBm) | Test Distance<br>(cm) | Power density<br>(mW/cm <sup>2</sup> ) | Limit (mW/cm <sup>2</sup> ) | Pass / Fail |
|----------------|-------------------------|-----------------------|--|-----------------------------|-------------|
| 13.56MHz       | -27.49                  | 20                    | 0.0000035                              | 0.9789                      | Pass        |

**Note:**  $E[dB \ \mu \ V/m] = EIRP[dBm] + 95.2$ , for d = 3 m.  $E[dB \ \mu \ V/m]=67.71$ 

#### WPT

### **Magnetic Field Emissions**

| Frequency Band | Test Distance<br>(cm) | H-Field Strength<br>(A/m) | Limit (A/m) | 50% of the<br>MPE Limit<br>(A/m) | Pass / Fail |

| Side 2         | 15                    | 0.10                      | 1.63        | 0.815                            | Pass        |
| Тор            | 20                    | 0.09                      | 1.63        | 0.815                            | Pass        |
| Bottom         | 15                    | 0.08                      | 1.63        | 0.815                            | Pass        |

#### **Electric Field Emissions**

| Frequency Band | Test Distance<br>(cm) | E-Field Strength<br>(V/m) | Limit (V/m) | 50% of the<br>MPE Limit<br>(V/m) | Pass / Fail |
|----------------|-----------------------|---------------------------|-------------|----------------------------------|-------------|
| Side 1         | 15                    | 2.80                      | 614         | 307                              | Pass        |
| Side 2         | 15                    | 3.09                      | 614         | 307                              | Pass        |
| Side 2         | 15                    | 3.76                      | 614         | 307                              | Pass        |
| Тор            | 20                    | 7.23                      | 614         | 307                              | Pass        |
| Bottom         | 15                    | 6.06                      | 614         | 307                              | Pass        |

#### **Conclusion:**

The test worst result of MPE is less than the limit
