FCC §15.247 (i), §2.1091 - RF Exposure

## FCC ID:2ATNH-PWFM5001

## Applied procedures / limit

According to FCC $\S 15.247$ (i) and $\S 1.1307$ (b)(1), systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

## MPE PREDICTION

Predication of MPE limit at a given distance, Equation from OET Bulletin 65, Edition97-01 $\mathrm{S}=\mathrm{PG} / 4 \pi \mathrm{R}^{2}$

Where: S = power density
$\mathrm{P}=$ power input to antenna
$\mathrm{G}=$ power gain of the antenna in the direction of interest relative to an isotropic radiator $R=$ distance to the center of radiation of the antenna, $R=0.2 \mathrm{~m}$

## TEST RESULTS

Main Power: $92.39 \mathrm{~dB} \mu \mathrm{~V} / \mathrm{m}=55.01-95.2=-40.19 \mathrm{dBm}$

## 30MHz-1G:-40.19+4.7=-35.49dBm
