## Box Contents

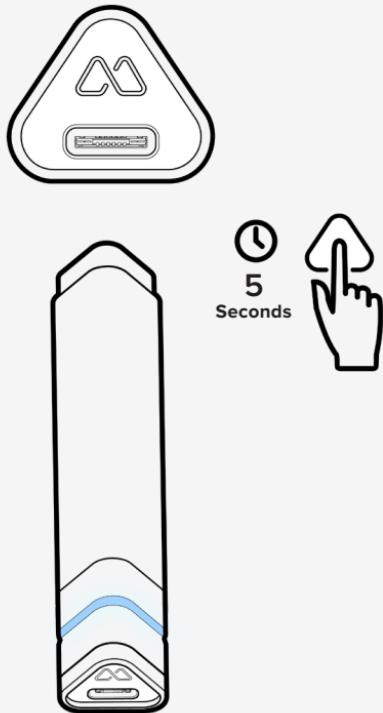

- 1 Prodose base
- 2 USB-C Charging Cord

## Charge Your Device

Connect your Prodose base to a power source using the included USB-C Cable for approx. **10 minutes**.

The device will have enough power for initial pairing, but will need roughly **2 hours** to have a full charge.

## Download the App

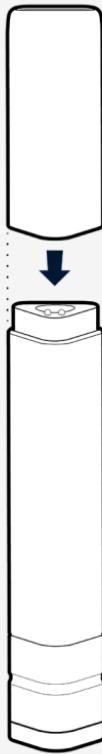

Visit <https://prodose.io/install> to download to Prodose app.

In your smartphone settings, make sure **Bluetooth** is turned **on**.

## Pair your Device

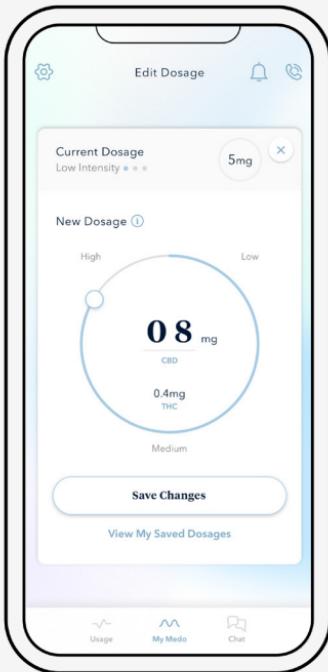

**Press** and **hold** the power button for **5 seconds**.

The blue light will flash solid when your Prodose device has paired with your smartphone.

## Connect a Cartridge

Unbox and gently connect your cartridge to the Prodose base. The LED lights will cycle yellow while validating your cartridge. A green light indicates your dose is ready to go, then press (and release) the main button to initiate a dose.

## Personalize Your Dose

In the Prodose App click the **Edit** Button within “My Dosage”.

Drag the slider to desired dosage.

Tap the **Save Changes** button to save the new dosage amount.

# FAQ & Troubleshooting

## LED COLOR REFERENCE

- **Purple (cycling)**  
Device is unlisted from any pairings and is searching for a Bluetooth connected handset to initiate Bluetooth pairing.
- **Blue (cycling)**  
Device is searching for a Bluetooth pairing.
- **Yellow (cycling)**  
Device is searching cartridge library for known details.
- **Red (blinking x2)**  
Cartridge has not successfully coupled, remove cartridge and reconnect waiting for solid green LED to indicate cartridge recognition.

## HOLDING THE POWER BUTTON

- **Green (solid)**  
Battery is on
- **Red (flashing)**  
Battery has no power
- **Red (solid)**  
Power down
- **Blue (flashing)**  
Charging (while connected to charging cable)
- **Blue (cycling)**  
Bluetooth searching

If your device is not responding, check your battery by pressing and releasing the power button. If no response, charge your battery for at least 15 min.

# FAQ & Troubleshooting

## SETTING YOUR DOSE

From your dashboard, select **Edit** under **My Dosage**. Use your thumb to rotate the wheel, increasing or decreasing the dosage, until you've selected your desired milligrams.

The dosage will be distributed over 1-3 inhalations, dependent on the intensity level, as described below:

### Low Intensity •••

1mg - 4mg

Distributed in one inhalation.

### Medium Intensity •••

5mg - 8mg

Distributed over two inhalations.

### High Intensity •••

9mg - 10mg

Distributed over three inhalations.

Tapping Save will return you to your home screen and activate your dose so its ready to use.

## CARTRIDGE ISSUES

### The device is powered on and paired but the app reads “no cartridge”:

Remove the cartridge and reconnect, wait for a solid green LED to indicate it has recognized the cartridge.

### The device is powered on, not paired and the LED flashes red:

Remove the cartridge and reconnect, wait for a solid green LED to indicate it has recognized the cartridge.

### Cartridge uncoupled while dosing (this will be indicated by a red LED flashing during the normal dosing sequence and the device emitted less-to-no vapor):

The device knows that this has happened and your dose will be ready when you reconnect the cartridge, waiting for a solid green LED to indicate cartridge recognition.
