## Maximum Permissible Exposure Evaluation FCC ID: 2AU4DDCA

## 1. Client Information

| Applicant | $:$ | X-Sense Innovations Co., Ltd. |
| :--- | :--- | :--- |
| Address | $:$B4 503D,Tower B, Kexing Science Park, No15 Keyuan Road, <br> Technology Park Community, Yuehai Avenue, Nanshan District, <br> Shenzhen, China |  |
| Manufacturer | $:$ | X-Sense Innovations Co., Ltd. |
| Address | $:$B4 503D,Tower B, Kexing Science Park, No15 Keyuan Road, <br> Technology Park Community, Yuehai Avenue, Nanshan District, <br> Shenzhen, China |  |

## 2. General Description of EUT

| EUT Name | $:$ | Smart Smoke and Carbon Monoxide Alarm Listener with Voice <br> Alerts |  |
| :--- | :--- | :--- | :--- |
|  | $:$ | SAL100 |  |
| Model Different |  | ---- |  |
| Product <br> Description | $:$ | Operation Frequency: | 912.375 MHz |
|  |  | Antenna Gain: | 1dBi spring antenna |
| Power Rating | $:$ | LRodulation Type: | FSK |
| Software Version | $:$ | SAL100_V1.0.2 |  |
| Hardware Version | $:$ | SAL100_V1.2 |  |
| Connecting I/O <br> Port(S) | $:$ | Please refer to the User's Manual |  |
| Remark | $:$ | the evaluation report used the EUT(RW-C-202306-0105-2-2\#). |  |

## MPE Calculations for WIFI

1. EUT Operation Condition:

Software provided by client enabled the EUT to transmit and receive data at lowest, middle and highest channel individually.
2. Exposure Evaluation:

Equation from page 18 of OET Bulletin 65, Edition 97-01
$S=(P G) / 4 \pi R^{2}$
Where
S: power density
P: power input to the antenna
G: power gain of the antenna in the direction of interest relative to an isotropic radiator.
$\mathbf{R}$ : distance to the center of radiation of the antenna
3. Simultaneous transmission MPE Considerations

According to KDB447498: All transmitters and antennas in the host must be either evaluated for MPE compliance, by measurement or computational modeling, or qualify for the standalone MPE test exclusion in section 7.1. Simultaneous transmission MPE test exclusion applies when the sum of the MPE ratios for all simultaneous transmitting antennas incorporated in a host device, based on the calculated/estimated, numerically modeled or measured field strengths or power density, is $\leq 1.0$.
This means that:
$\Sigma$ of MPE ratios $\leq 1.0$

## 4. Test Result:

| 912.375MHz Worst Data |  |  |  |  |  |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Mode | Max. <br> Output <br> Power (dBuV/m ) | Max. Output Power (dBm) | Turn-up Power (dB) | Max tune up power (dBm) [P] | ANT Gain (dBi) [G] | $\begin{gathered} \text { Distance } \\ \text { (cm) } \\ {[R]} \end{gathered}$ | Power Density $\left(\mathrm{mW} / \mathrm{cm}^{2}\right)$ [S] | Limit |
| 912.375MHz | 77.67 | -22.29 | $-22 \pm 1$ | -21 | 1 | 20 | 0.000002 | 0.60825 |
| Note: <br> $\mathrm{N}_{\mathrm{T} X=}=\mathrm{Num}$ <br> For conducted $m$ dB shall be added between 30 MHz <br> So: EIRP=E+201 | of Tran surements an upper 1000 MH , $g d+104.8$ <br> ric field streng valent isotropic fied measuren -104.8-(4.7 | Antenna <br> low 1000 MHz ound on the field or an addition <br> in $\mathrm{dB} \mu \mathrm{V} / \mathrm{m}$ <br> lly radiated powe nt distance in m <br> r 6) | e field stre strength th 6 dB shall <br> dBm | th shall be co would be obse added for frea | puted as spe ed on a test ncies below | fied in item range with a 0 MHz . | ), and then an round plane | dditional 4.7 requencies |

5. Summary simultaneous transmission results
$300-1500 \mathrm{MHz}$ :
The worst MPE is calculated as $0.000002 \mathrm{~mW} / \mathrm{cm} 2$ < limit $912.375 / 1500=0.60825 \mathrm{~mW} / \mathrm{cm}^{2}$. So, RF exposure limit warning or SAR test are not required.

## 6. Conclusion:

As specified in Table 1B of 47 CFR 1.1310- Limits for Maximum Permissible Exposure (MPE),
Limits for General Population/ Uncontrolled Exposure

| Frequency Range <br> $(\mathrm{MHz})$ | Power density <br> $\left(\mathrm{mW} / \mathrm{cm}^{2}\right)$ |
| :---: | :---: |
| $300-1,500$ | $\mathrm{~F} / 1500$ |
| $1,500-100,000$ | 1.0 |

## Note

For a more detailed features description, please refer to the RF Test Report.
7. Conclusion:

The measurement results comply with the FCC Limit per 47 CFR 2.1091 for the uncontrolled RF Exposure of mobile device.
