RF Exposure Evaluation Report

FCC ID : 2AUCY-V2145 EQUIPMENT : Mobile Phone

Brand Name : vivo
Model Name : V2145

Applicant: vivo Mobile Communication Co., Ltd.

No.1, vivo Road, Chang'an, Dongguan, Guangdong, China

Manufacturer: vivo Mobile Communication Co., Ltd.

No.1, vivo Road, Chang'an, Dongguan, Guangdong, China

Report No.: FA212202A

STANDARD : FCC CFR 47 part 1, 1.1307(b) and 1.1310

KDB 680106 D01v03

We, Sporton International Inc. (Kunshan), would like to declare that the tested sample has been evaluated in accordance with the test procedures given in KDB 680106 D01v03 and has been in compliance with the applicable technical standards.

The test results in this report apply exclusively to the tested model / sample. Without written approval of Sporton International Inc. (Kunshan), the test report shall not be reproduced except in full.

Approved by: Si Zhang

1. Description of Equipment Under Test (EUT)

Product Feature & Specification					
EUT Type Mobile Phone					
Brand Name	vivo				
Model Name	V2145				
FCC ID 2AUCY-V2145					
Frequency Range 125 kHz ~ 146 kHz					
Moudlation Type	ASK				
HW Version	MP_0.1				
SW Version	PD2185BF_EX_A_12.0.9.2.W30.V000L1				
EUT Stage	Production Unit				
Date of Test	Apr. 11, 2022				

Report No.: FA212202A

Declaration of Conformity:

The test results with all measurement uncertainty excluded are presented in accordance with the regulation limits or requirements declared by manufacturers.

Comments and Explanations:

The declared of product specification for EUT presented in the report are provided by the manufacturer, and the manufacturer takes all the responsibilities for the accuracy of product specification.

2. Administration Data

Sporton International Inc. (Kunshan) is accredited to ISO/IEC 17025:2017 by American Association for Laboratory Accreditation with Certificate Number 5145.02.

SPORTON LAB. RF Exposure Evaluation Report

3. RF Exposure Limit Introduction

§ 1.1310 The criteria listed in table 1 shall be used to evaluate the environmental impact of human exposure to radio frequency(RF) radiation as specified in § 1.1307(b), except in the case of portable devices which shall be evaluated according to the provisions of § 2.1093 of this chapter.

Report No.: FA212202A

Frequency range (MHz)	Electric field strength (V/m)	Magnetic field strength (A/m)	Power density (mW/cm ²)	Averaging time (minutes)
	(A) Limits for (Occupational/Controlled Expos	ure	()
0.3-3.0	614	1.63	* 100	6
3.0-30	1842/f	4.89/f	* 900/f ²	6
30-300	61.4	0,163	1.0	6
300-1,500			f/300	6
1,500-100,000			5	6
	(B) Limits for Gene	eral Population/Uncontrolled Ex	posure	
0.3-1.34	614	1.63	* 100	30
1.34-30	824/f	2.19/f	* 180/f ²	30
30-300	27.5	0.073	0.2	30
300-1,500			f/1500	30
1,500-100,000			1.0	30

f = frequency in MHz

- (1) Occupational/controlled exposure limits apply in situations in which persons are exposed as a consequence of their employment provided those persons are fully aware of the potential for exposure and can exercise control over their exposure. Limits for occupational/controlled exposure also apply in situations when a person is transient through a location where occupational/controlled limits apply provided he or she is made aware of the potential for exposure. The phrase fully aware in the context of applying these exposure limits means that an exposed person has received written and/or verbal information fully explaining the potential for RF exposure resulting from his or her employment. With the exception of transient persons, this phrase also means that an exposed person has received appropriate training regarding work practices relating to controlling or mitigating his or her exposure. Such training is not required for transient persons, but they must receive written and/or verbal information and notification (for example, using signs) concerning their exposure potential and appropriate means available to mitigate their exposure. The phrase exercise control means that an exposed person is allowed to and knows how to reduce or avoid exposure by administrative or engineering controls and work practices, such as use of personal protective equipment or time averaging of exposure.
- (2) General population/uncontrolled exposure limits apply in situations in which the general public may be exposed, or in which persons who are exposed as a consequence of their employment may not be fully aware of the potential for exposure or cannot exercise control over their exposure.

^{* =} Plane-wave equivalent power density

4. Test Mode

This device has been tested in the following charging conditions as below:

Test Mode	Test Setup Configuration	Charging Current Condition
TM1	Test w/ Client Device installed	< 1% Battery status
TM2	Test w/ Client Device installed	50% Battery status
ТМ3	Test w/ Client Device installed	Near 100% Battery status

Report No.: FA212202A

5. Measurement Equipment

Instrument	Manufacturer	Model No.	Serial No.	Freq Rang	Last Cal.	Due Date
Electric and Magnetic field Probe-Analyzer	Narda S.T.S / PMM	EHP 200AC	170WX80309	3KHz~30MHz	Oct ,26, 2021	Oct ,25, 2022

6. RF Exposure Evaluation

- 1. The device support Wireless Power Consortium with a maximum power transfer to the phone of 10W. In addition, the device can be used in reverse, as a transmitter to another wireless charging receiver. In this case, up to 10W (BPP) can be transmitted to the external receiver.
- 2. According to 202010 TCBC workshop, for portable devices that do not physically attach to phone, desktop WPT testing guidance from FCC KDB 680106 D01v03 is applied.
- 3. There is no mechanical / magnetic connection mechanism between client and smart phone (this application) so charging is only supported for desktop/tabletop use
- 4. The equipment under test was placed on a wooden desk inside of shield room. The isotropic field probe was used to measure the field strength for 6 EUT surfaces. The detailed setup photo please refer to Appendix A.
- 5. Per KDB 680106 D01v03 and 202010 TCBC workshop, RF exposure should be evaluation at 15 cm surrounding the device and 20 cm away from the surface from all coils. Emissions between 50 kHz to 300 kHz should be assessed versus the limits at 300 kHz in Table 1 of Section 1.1310: 1.63 A/m and aggregate H-field strengths from all simultaneous transmitting coils are demonstrated to be less than 50% of the MPE limit.

Position		H-Field Measurement (A/m)					
(Distance)	A (15cm)	B (15cm)	C (15cm)	D (15cm)	E 20cm	F 20cm	Limit (A/m)
TM1	0.0580	0.0548	0.0577	0.0570	0.0548	0.0577	
TM2	0.0577	0.0564	0.0580	0.0567	0.0581	0.0567	0.815
TM3	0.0593	0.0588	0.0563	0.0547	0.0567	0.0554	

Conclusion:

The field strength limit refers to Part 1.1310 and the test result of exposure evaluation is compliant.
