TEST REPORT

P			
Applicant:	Artika For living inc.		
Address of Applicant:	1756 50th Avenue, Lachine, QC, Canada, H8T 2V5		
Manufacturer:	FOSHAN ECCO LIGHTING CO.,LTD		
Address of Manufacturer:	No.70,East Development Zone,Donglian Shichen Village,Danzao Town,Nanhai District,Foshan City,Guangdong Province,P.R.China		
Product name:	Cabinet Light		
Model:	UCL-IMTR-XXXXXXXX, "-XXXXXXXX" can be A to Z and/or 0 to 9 and/or blank(commercial code)		
Rating(s):	For Adapter: AC 100-240V 50-60Hz For Main: DC 24V Input DC 24V 1.0A Output		
Trademark:	Artika		
Standards:	FCC Part 15 subpart B		
FCC ID:	2AUHG-UCL-IMTR		
Date of Receipt:	2023-12-28		
Date of Test:	2023-12-28~2024-01-02		
Date of Issue:	2024-01-02		
Test Result	Pass*		

* In the configuration tested, the test item complied with the standards specified above.

Test Summary:

The following standards have been applied to ensure the product conforms with the protection requirements of the council directive FCC part 15B.

Electromagnetic Emissions				
Test Item	Test Standard	Test Method	Class/Severity	Result
Conducted Emission(0.15-30MHz)	FCC part 15.107	ANSI C63.4:2014	Class B	PASS
Radiated Emission(30-1000MHz)	FCC part 15.109	ANSI C63.4:2014	Class B	PASS

Test Facility

The test facility is recognized, certified, or accredited by the following organizations:

- CNAS Lab code:L9342
- FCC Designation No.:CN5035
- IC Registration NO.: 12593A
- NVLAP LAB CODE: 600199-0

Test Location:

All the tests were performed in ITL Co., LTD. Where is located at at No.8, Jinqianling Street 5, Huangjiang, Dongguan, Guangdong, China.

Tel: 0086-769-39001678, Fax: 0086-20-62824387 No test is subcontracted

This report is for the exclusive use of ITL's client and is provided pursuant to the agreement between ITL assumes no liability to any party, other than to the Client in accordance with the agreement, for any loss, expense or damage occasioned by the use of this report. Only the Client is authorized to permit copying or distribution of this report and then only in its entirety. Any use of the ITL name or one of its marks for the sale or advertisement of the tested material, product or service must first be approved in writing by ITL. The observations and test results in this report are relevant only to the sample tested. This report by itself does not imply that the material, product, or service is or has ever been under an ITL certification program. The test report only allows to be revised within the retention period unless further standard or the requirement was noticed.

Section 2 Emission Test Results

2.1 Conducted Emission at Mains Terminals, 150 kHz to 30MHz

Test Requirement:	FCC part 15.107
Test Method:	ANSI C63.4:2014
Test Voltage:	120V AC, 60Hz
Frequency Range:	150 kHz to 30MHz
Detector:	Peak for pre-scan
	Quasi-Peak and Average at frequency with maximum peak (9 kHz resolution bandwidth)
Uncertainty:	2Uc (V) = 2.3dB

Class / Limit: Class B

Frequency range	dB (µ			
MHz	Quasi-peak	Average		
0.15 to 0.50	66 to 56	56 to 46		
0.50 to 5	56	46		
5 to 30	60	50		
NOTE 1 :The limit decreases linearly with the logarithm of the frequency in the range				
0.15 MHz to 0.50 MHz.				

NOTE 2: The lower limit is applicable at the transition frequency.

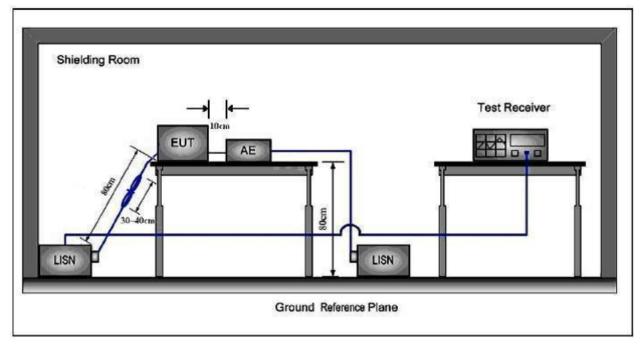

2.1.1 E.U.T. Operation

Operating Environment:

Temperature:25.0 °CHumidity:49 % RHAtmospheric Pressure:101 kPaEUT Operation:Pre-test the EUT in On Mode with each mode to find the worst case, Compliance
test the EUT in On Mode with brightest white light as the worst case was found.

ITL

2.1.2 Test Setup and Procedure

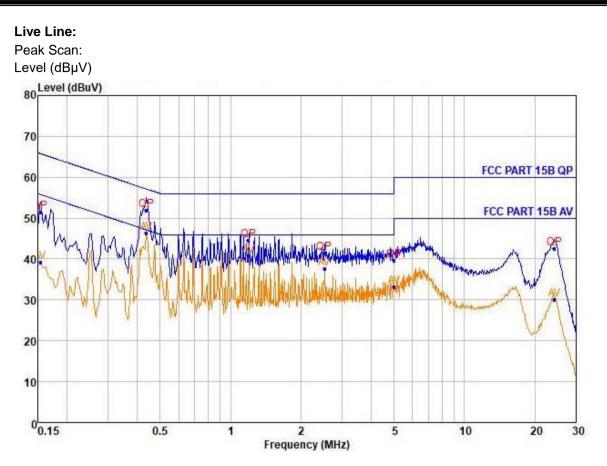

- 1. The mains terminal disturbance voltage test was conducted in a shielded room.
- 2. The EUT was connected to nominal power supply through a LISN 1 (Line Impedance Stabilization Network) which provides a 50Ω/50µH+5Ω linear impedance. The power cables of all other units of the EUT were connected to a second LISN 2, which was bonded to the ground reference plane in the same way as the LISN 1 for the unit being measured. A multiple socket outlet strip was used to connect multiple power cables to a single LISN provided the rating of the LISN was not exceeded.
- 3. The tabletop EUT was placed upon a non-metallic table 0.8m above the ground reference plane. And for floor-standing arrangement, the EUT was placed on the horizontal ground reference plane, but separated from metallic contact with the ground reference plane by 0.1m of insulation.
- 4. The test was performed with a vertical ground reference plane. The rear of the EUT shall be 0.4 m from the vertical ground reference plane. The vertical ground reference plane was bonded to the horizontal ground reference plane. The LISN 1 was placed 0.8 m from the boundary of the unit under test and bonded to a ground reference plane for LISNs mounted on top of the ground reference plane. This distance was between the closest points of the LISN1 and the EUT. All other units of the EUT and associated equipment was at least 0.8 m from the LISN 2.

2.1.3 Measurement Data

Pre-scan was performed with peak detected on both live and neutral cable. Quasi-peak & average measurements were performed at the frequencies which maximum peak emission level was detected. Please see the attached Quasi-peak and Average test results.

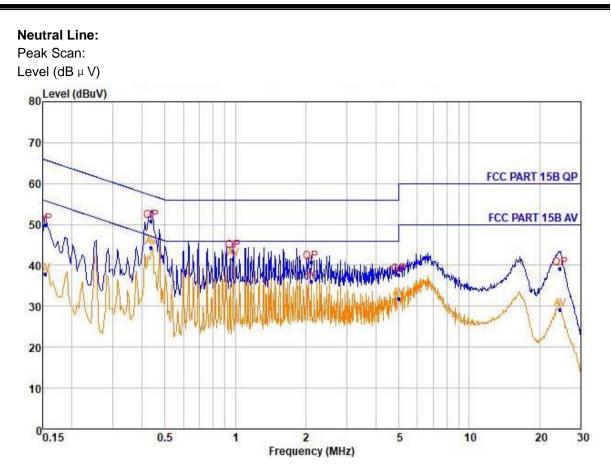

This report is for the exclusive use of ITL's client and is provided pursuant to the agreement between ITL assumes no liability to any party, other than to the Client in accordance with the agreement, for any loss, expense or damage occasioned by the use of this report. Only the Client is authorized to permit copying or distribution of this report and then only in its entirety. Any use of the ITL name or one of its marks for the sale or advertisement of the tested material, product or service must first be approved in writing by ITL. The observations and test results in this report and then the material, product, or service is or has ever been under an ITL certification program. The test report only allows to be revised within the retention period unless further standard or the requirement was noticed.

2.2 Radiated Emissions, 30MHz to 1GHz

Test Requirement:	FCC part 15.109
Test Method:	ANSI C63.4:2014
Test Voltage:	120V AC, 60Hz
Frequency Range:	30MHz to 1GHz
Measurement Distance	3m
Detector:	Peak for pre-scan
	Quasi-Peak if maximised peak within 6dB of limit (120 kHz resolution bandwidth)
Uncertainty:	2Uc (V) = 3.35dB
Class / Limit:	Class B

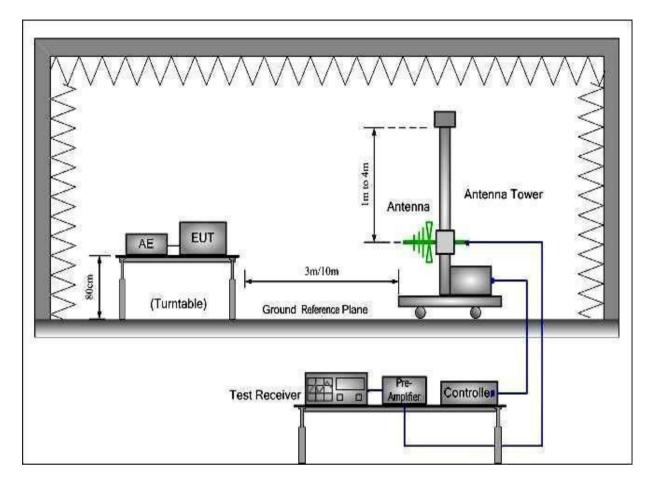

Frequency range	Quasi-peak limits				
MHz	dB (µV/m)				
30 to 88	40				
88 to 216	43.5				
216 to 960	46				
960 to 1000	54				
At transitional frequencies the lower limit applies					

2.2.1 E.U.T. Operation

Operating Environment:

Temperature:25.0 °CHumidity:49 % RHAtmospheric Pressure:101 kPaEUT Operation:Pre-test the EUT in On Mode with each mode to find the worst case, Compliance
test the EUT in On Mode with brightest white light as the worst case was found.

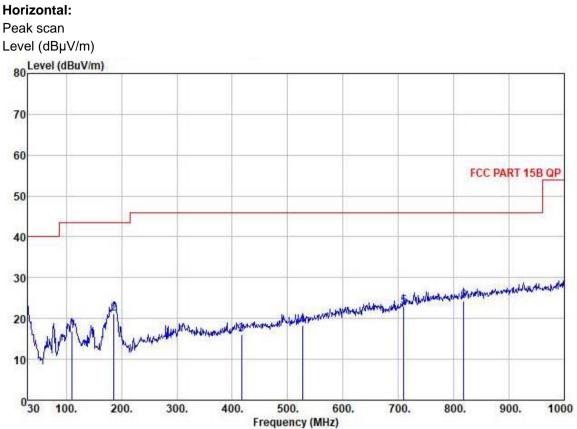

2.2.2 Test Setup and Procedure

- 1. The radiated emissions test was conducted in a semi-anechoic chamber.
- 2. Biconical and log periodic antenna was used for the frequency range from 30MHz to 1GHz
- 3. The EUT was connected to nominal power supply through a mains power outlet which was bonded to the ground reference plane; The mains cables were draped to the ground reference plane. The tabletop EUT was placed upon a non-metallic table 0.8m above the ground reference plane. And for floor-standing arrangement, the EUT was placed on the horizontal ground reference plane, but separated from metallic contact with the ground reference plane by 0.1m of insulation.
- 4. Before final measurements of radiated emissions, a pre-scan was performed in the spectrum mode with the peak detector to find out the maximum emissions spectrum plots of the EUT.
- 5. The frequencies of maximum emission were determined in the final radiated emissions measurement. At each frequency, the EUT was rotated 360°, and the antenna was raised and lowered from 1 to 4 meters in order to determine the maximum disturbance. Measurements were performed for both horizontal and vertical antenna polarization.

This report is for the exclusive use of ITL's client and is provided pursuant to the agreement between ITL assumes no liability to any party, other than to the Client in accordance with the agreement, for any loss, expense or damage occasioned by the use of this report. Only the Client is authorized to permit copying or distribution of this report and then only in its entirety. Any use of the ITL name or one of its marks for the sale or advertisement of the tested material, product or service must first be approved in writing by ITL. The observations and test results in this report are relevant only to the sample tested. This report by itself does not imply that the material, product, or service is or has ever been under an ITL certification program. The test report only allows to be revised within the retention period unless further standard or the requirement was noticed.

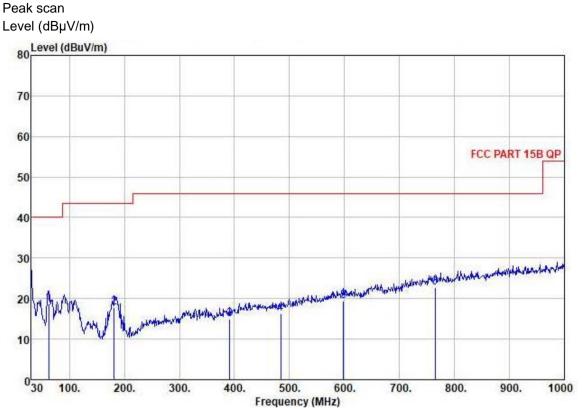

2.2.3 Measurement Data

Quasi-peak measurement
