### RF EXPOSURE EVALUATION

### 1. PRODUCT INFORMATION

Product Description	1:24 RC Cat 745 Articulated Truck
Model Name	25004
FCC ID	2AUJF-25004

### 2. EVALUATION METHOD

According to 447498 General RF Exposure Guidance.

The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances ≤ 5 mm are determined by:

[(max. power of channel, including tune-up tolerance, mW)/(min. test separation distance, mm)]  $\cdot [\sqrt{f(GHz)}] \le 3.0$  for 1-g SAR and  $\le 7.5$  for 10-g extremity SAR.

Where f(GHz) is the RF channel transmit frequency in GHz

Power and distance are rounded to the nearest mW and mm before calculation

# 3. CALCULATION

According to the follow transmitter output power ( Pt ) formula :

According to the report NTC-ER2003020,  $P_t=83.84$  dBuV/m @3m=-11.39 dBm The result for RF exposure evaluation SAR= (max. tune-up power(0.079mW) /5mm) .[ $\sqrt{2.41}$ (GHz)]=0.025<3.0 for 1-g SAR

## 4. CONCLUSION

The SAR evaluation is not required.
