

KT05 manual for metal two key remote control

1 Product parameters

Main technical indicators:

Working voltage: DC 3V

Working current: < 12mA

Operating frequency: 433MHz

Transmission power: $\geq 10\text{mW}$

Reference distance: 50m (no interference in open)

Frequency deviation: $\pm 0.2\text{MHz}$

Transmission rate: 50-60kHz

Appearance dimension: 60 * 31 * 11mm

Oscillation resistance: according to the needs of guests

Coding method: 1527 learning code (the first key is)

Battery model: cr2016 2

Each remote control has an independent address code, so the remote controller is a separate individual, which will not cause mutual interference.

Scope of application

Home and shopping mall alarm; Electric vehicle, automobile, motorcycle alarm, various door and window controller and other industrial control

2 instructions

press the remote control key to turn on the LED light of the remote control, and the code issuing is successful.

3 matters needing attention

1) please follow the battery replacement in time when the remote control voltage is insufficient (when the battery voltage of remote control is insufficient, the distance of remote control will be closer generally).

2) when using wireless electronic products, it is necessary to avoid metal mask, large-scale electronic equipment, electromagnetic field and other strong interference sources, so as to avoid short distance between remote control and receiving or failure to work normally.

3) do not use this electronic product abnormally. Abnormal use will reduce the performance and life of the product, and will damage the product seriously, and bring potential risks to your safety

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Any changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications.

However, there is no guarantee that interference will not occur in a particular installation.

If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

The device has been evaluated to meet general RF exposure requirement. The device can be used in portable exposure condition without restriction
