

WIRELESS TEST REPORT – 381042-2TRWL

Applicant:

Satcube AB

Product:

Portable satellite terminal

Model:

Satcube Ku

FCC ID:

2AUV4SATCUBEKU

Specifications:

FCC 47 CFR Part 25

FCC 47 CFR Part 15 Subpart C, §15.247

Date of issue: September 27, 2020

Section 1 Report summary

1.1 Test specifications

FCC 47 CFR Part 25	Satellite communications
FCC 47 CFR Part 15, Subpart C, Clause 15.247	Operation in the 902–928 MHz, 2400–2483.5 MHz, and 5725–585 MHz

1.2 Exclusions

Only spurious emissions test of two transmitters operating simultaneously was tested.

1.3 Statement of compliance

In the configuration tested, the EUT was found compliant.

Testing was performed against all relevant requirements of the test standard except as noted in section 1.2 above. Results obtained indicate that the product under test complies in full with the requirements tested. The test results relate only to the items tested.

See “Summary of test results” for full details.

1.4 Test report revision history

Table 1.4-1: Test report revision history

Revision #	Date of issue	Details of changes made to test report
TRF	September 27, 2020	Original report issued

Section 2 Engineering considerations

2.1 Modifications incorporated in the EUT for compliance

There were no modifications performed to the EUT during this assessment.

2.2 Technical judgment

Colocation of two transmitter modules was assessed when Wi-Fi was set to transmit at the middle channel at 2436 MHz and Satellite band at 14.25 GHz

2.3 Deviations from laboratory tests procedures

No deviations were made from laboratory procedures.

Section 3 Test conditions

3.1 Atmospheric conditions

Temperature	15 °C – 35 °C
Relative humidity	30 % – 60 %
Air pressure	86 kPa (860 mbar) – 106 kPa (1060 mbar)

When it is impracticable to carry out tests under these conditions, a note to this effect stating the ambient temperature and relative humidity during the tests shall be recorded and stated.

3.2 Power supply range

The normal test voltage for equipment to be connected to the mains shall be the nominal mains voltage. For the purpose of the present document, the nominal voltage shall be the declared voltage, or any of the declared voltages $\pm 5\%$, for which the equipment was designed.

Section 4 Measurement uncertainty

4.1 Uncertainty of measurement

UKAS Lab 34 and TIA-603-B have been used as guidance for measurement uncertainty reasonable estimations with regards to previous experience and validation of data. Nemko Canada, Inc. follows these test methods in order to satisfy ISO/IEC 17025 requirements for estimation of uncertainty of measurement for wireless products.

Measurement uncertainty budgets for the tests are detailed below. Measurement uncertainty calculations assume a coverage factor of $K = 2$ with 95% certainty.

Section 8 Testing data

8.1 Spurious emission limits

8.1.1 Definitions and limits

§25.202

(f) The mean power of emissions shall be attenuated below the mean output power of the transmitter in accordance with the schedule set forth in paragraphs (f)(1) through (f)(4) of this section.

- (1) In any 4 kHz band, the center frequency of which is removed from the assigned frequency by more than 50 percent up to and including 100 percent of the authorized bandwidth: 25 dB;
- (2) In any 4 kHz band, the center frequency of which is removed from the assigned frequency by more than 100 percent up to and including 250 percent of the authorized bandwidth: 35 dB;
- (3) In any 4 kHz band, the center frequency of which is removed from the assigned frequency by more than 250 percent of the authorized bandwidth: An amount equal to 43 dB plus 10 times the logarithm (to the base 10) of the transmitter power in watts (–13 dBm fixed);

FCC §15.247:

- (d) In any 100 kHz bandwidth outside the frequency band in which the spread spectrum or digitally modulated intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement, provided the transmitter demonstrates compliance with the peak conducted power limits. If the transmitter complies with the conducted power limits based on the use of RMS averaging over a time interval, as permitted under paragraph (b)(3) of this section, the attenuation required under this paragraph shall be 30 dB instead of 20 dB. Attenuation below the general limits specified in §15.209(a) is not required. In addition, radiated emissions which fall in the restricted bands, as defined in §15.205(a), must also comply with the radiated emission limits specified in §15.209(a) (see §15.205(c)).

Table 8.1-1: FCC §15.209 – Radiated emission limits

Frequency, MHz	Field strength of emissions		Measurement distance, m
	μV/m	dBμV/m	
0.009–0.490	2400/F	$67.6 - 20 \times \log_{10}(F)$	300
0.490–1.705	24000/F	$87.6 - 20 \times \log_{10}(F)$	30
1.705–30.0	30	29.5	30
30–88	100	40.0	3
88–216	150	43.5	3
216–960	200	46.0	3
above 960	500	54.0	3

Notes: In the emission table above, the tighter limit applies at the band edges.
For frequencies above 1 GHz the limit on peak RF emissions is 20 dB above the maximum permitted average emission limit applicable to the equipment under test.

Tested by	Andrey Adelberg	Test date	September 25, 2020

8.1.3 Observations, settings and special notes

- **Test Method:** KDB 971168 D01 Power Meas License Digital Systems v03r01
- **Test procedure used:** ANSI C63.26-2015-Section 5.7
- Spurious radiation (enclosure) was scanned from 30 MHz to 40 GHz.

Spectrum analyser settings:

Resolution bandwidth:	100kHz for below 1GHz or 1MHz for above 1GHz
Video bandwidth:	≥3 × RBW
Detector mode:	Peak
Sweep time:	Auto couple
Trace mode:	Max-hold

8.1.4 Test data

Figure 8.1-1: Radiated spurious emissions co-location test below 1 GHz

Figure 8.1-2: Radiated spurious emissions co-location test within 1–18 GHz

Note: Emission at 2436 MHz is the fundamental of Wi-Fi module and 14.25 GHz is fundamental of Satellite transmitter.

8.1.4 Test data, continued

Figure 8.1-3: Radiated spurious emissions co-location test within 18–26.5 GHz

Figure 8.1-4: Radiated spurious emissions co-location test within 26.5–40 GHz

Note: emission at 28.5 GHz is the second harmonic of Satellite transmission.

All other spurious radiation emissions were greater than 10 dB below the limit.

Section 9 Block diagrams of test set-ups

9.1 Radiated emissions set-up for frequencies below 1 GHz

9.2 Radiated emissions set-up for frequencies above 1 GHz

Note: RF absorbers were placed on the floor to comply with the FCC Part 15 setup requirements.
