Test Result

The requirements of the tests performed as shown in the overview (clause 4) were fulfilled by the equipment under test. The complete test results are presented in the following.
“Passed” indicates that the equipment under test conforms with the relevant limits of the testing standard without taking any measurement uncertainty into account as stated in clause 1.3 of ANSI C63.10 (2013). However, the measurement uncertainty is calculated and shown in this test report.

1 Identification

1.1 Applicant

Name:	Robert Bosch GmbH
Address:	Robert-Bosch-Str. 200, 31139 Hildesheim
Country:	Germany
Name for contact purposes:	Mr. Tilman ALMSTEDT
Phone:	+49 5121 49-4226
eMail address:	Eike-Tilman.Almstedt@de.bosch.com
Applicant represented during the test by the following person:	-

1.2 Manufacturer

Name:	Robert Bosch GmbH
Address:	Robert-Bosch-Str. 200, 31139 Hildesheim
Country:	Germany
Name for contact purposes:	Mr. Dirk ZAMOW
Phone:	+49 5121 49-2608
eMail address:	Dirk.Zamow@de.bosch.com
Manufacturer represented during the test by the following person:	-

1.3 Production facility

Name:	Robert Bosch (Malaysia) Sdn Bhd
Address:	Free Industrial Zone 1, 11900 Bayan Lepas, Penang
Country:	Malaysia
Name for contact purposes:	Mr. Dr. Siegfried SKIRL
Phone:	-
eMail address:	Siegfried.Skirl@my.bosch.com
Manufacturer represented during the test by the following person:	-

1.4 Test Laboratory

The tests were carried out by: **PHOENIX TESTLAB GmbH**
Königswinkel 10
32825 Blomberg
Germany

Accredited by Deutsche Akkreditierungsstelle GmbH (DAkKS) in compliance with DIN EN ISO/IEC 17025 under Reg. No. D-PL-17186-01-06 and D-PL-17186-01-05, FCC Test Firm Designation Number DE0004, FCC Test Firm Registration Number 469623, CAB Identifier DE0003 and ISD# 3469A.

1.5 EUT (Equipment under Test)

EUT	
Test object: *	Virtual Cockpit Unit
Model name: *	VCURM1
Model number: *	7.515.400.920-22

Date of receipt of test sample:	01.06.2022
Start of test:	01.06.2022
End of test:	20.06.2022

2 Operational States

Description of function of the EUT:

The EUT is a car infotainment PC running in normal operation mode.

The following states were defined as the operating conditions:

The EUT was supplied by 12 V DC during all tests.

During all tests, software BITS TML and Eclipse for TML (delivered by the applicant) was used to control the functions of the EUT.

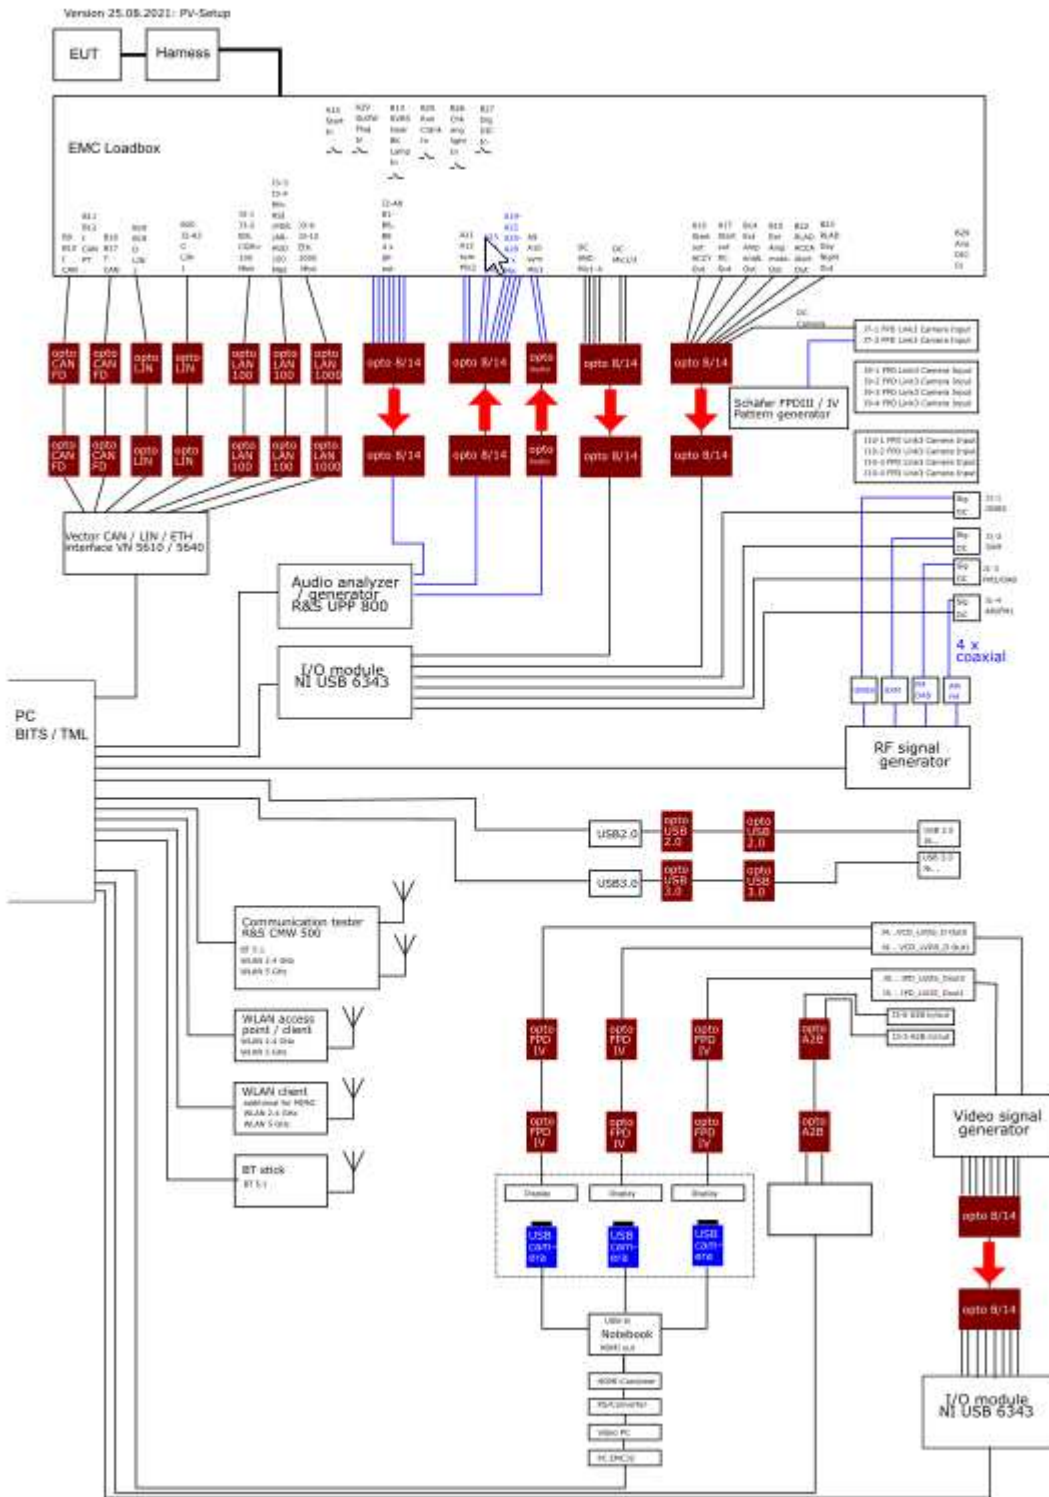

The system was setup as follows:

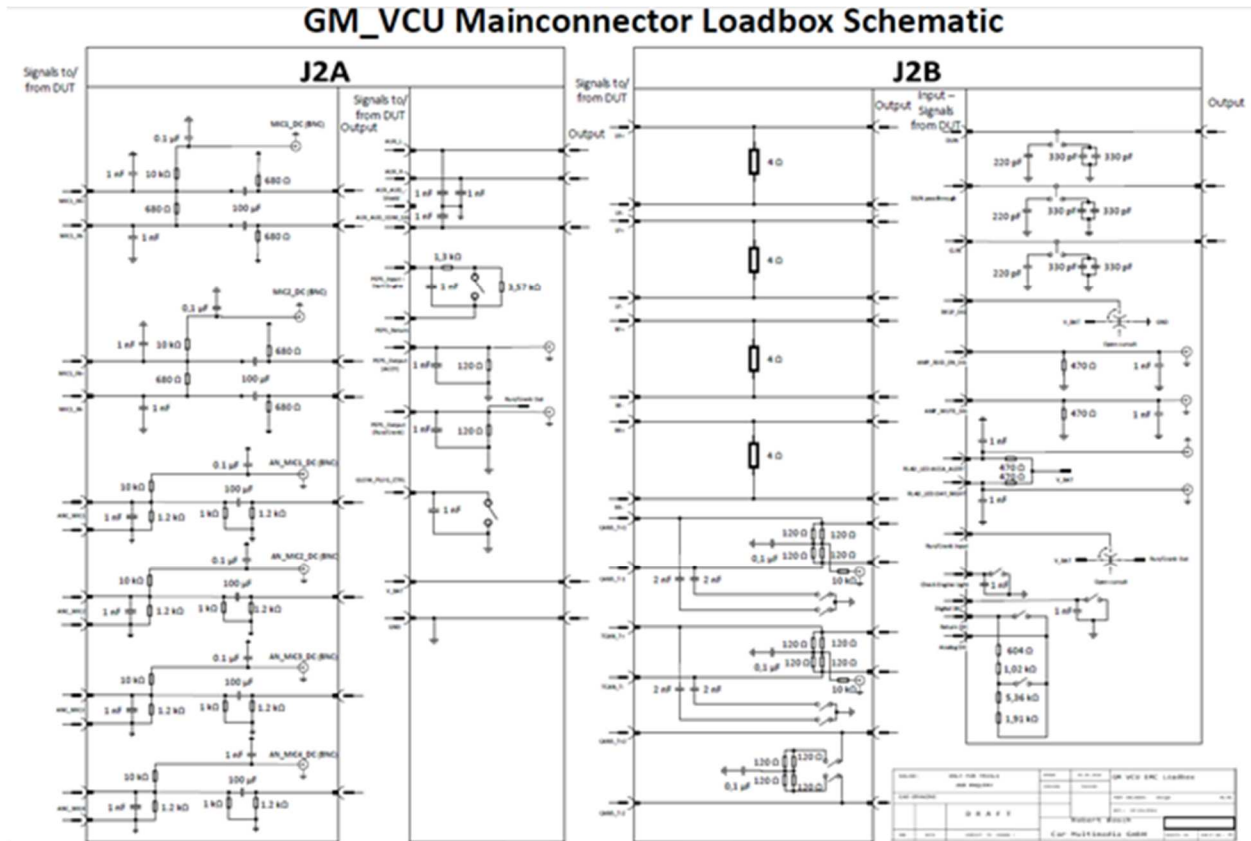

Information of the test setup provided by the applicant:

A2B	Route an analog audio input to the loudspeakers. signal 1KHz.	Undisturbed audio signal: 1. Audio volume 2. Audio frequency 1. [1.1V – 1.7V] 2. [f_in +/- 10Hz]	OK Background Scan
AM	Audio signal: AM signal with 60 dB μ V - AF: 1KHz, mod: 30% Analog output - 1.4 VRMS / 4 Ω A sinusoidal audio tone at 1KHz is generated from the test environment and fed as modulation: 30 % into antenna input line on VCU, which is routed to the internal amplifier then to loudspeaker output.	1. Audio volume 2. Audio frequency 3. Phantom voltage 1. [1.1V – 1.7V] 2. [f_in +/- 10Hz] 3. [9V – n/a]	OK Background Scan
FM1	A sinusoidal audio tone at 1kHz is generated from the Test Environment and fed as modulation on 96.1 MHz into antenna input line on VCU. Output to be monitored at VCU loudspeaker output. Monitoring of the phantom DC voltage	1. Audio volume 2. Audio frequency 3. Phantom voltage 1. [1.1V – 1.7V] 2. [f_in +/- 10Hz] 3. [9V – n/a]	OK
FM2	A sinusoidal audio tone at 1kHz is generated from the Test Environment and fed as modulation on 96.1 MHz into antenna input line on VCU. Output to be monitored at VCU loudspeaker output. Monitoring of the phantom DC voltage.	1. Audio volume 2. Audio frequency 3. Phantom voltage 1. [1.1V – 1.7V] 2. [f_in +/- 10Hz] 3. [9V – n/a]	OK Background Scan

DAB	Input (DAB Signal) Output (Bias voltage / Audio Signal)	1. Audio volume 2. Audio frequency 3. DAB BER 4. Phantom voltage 5. Phantom current 1. [1.1V – 1.7V] 2. [f_in +/- 10Hz] 3. [n/a – 100 ppm] 4. [9V – n/a] 5. [20mA – n/a]	OK Background Scan
AUX	Route audio signal to amplifier Test frequencies: L: 700 Hz, R: 750 Hz Audio signal is routed to amplifier then to loudspeakers.	1. Audio volume 2. Audio frequency 1. [1.1V – 1.7V] 2. [f_in +/- 10Hz]	OK
1st Ethernet T100	After TCP/IP connection has been established: Continuous data transfer between VCU and control PC via 100BASE-T MediaConverter box.	Continuous Ethernet communication No interruption of the data transfer during the test ≥ ~ 20% of max data rate	OK
2nd Ethernet T100	After TCP/IP connection has been established: Continuous data transfer between VCU and control PC via 100BASE-T MediaConverter box.	Continuous Ethernet communication No interruption of the data transfer during the test ≥ ~ 20% of max data rate	OK
Ethernet T1000	After TCP/IP connection has been established: Continuous data transfer between VCU and control PC via 1000BASE-T MediaConverter box.	Continuous Ethernet communication No interruption of the data transfer during the test ≥ ~ 20% of max data rate	OK
GYRO	N/A	Gyro offset G +/-0.75 dps	OK
Accelerometer	N/A	Static state Zero-g offset +/-5 mg	OK
System Temperature	SiP module temperature will be read continuously the results will be monitored during the tests.	1. t_SoC T° sensor 1. < 107 °C SiP module temperature Checked for limit (107°C),	OK

GNSS reception GPS / GLONASS	N/A	1. Phantom voltage 2. Phantom current 3. Position failures 4. Satellite FIX failures 1. [4V – n/a] 2. [n/a – 15 mA] 3. [0] 4. [0] Single position	OK
RLAD DAY_NIGHT	Output: Low	Voltage Output low side correct state: test cycle time low 0.5 s high	OK
RLAD FCA_ALERT	Output: Low	Voltage Output low side correct state: test cycle time low 0.5 s high	OK
GLOW PLUG	Input: Fixed key Low	Voltage correct state: Fixed key Low	OK
Backup Lampe	Input: Fixed key High	Voltage Fixed key High	OK
AMP Enable	Output: High	Voltage Output High side correct state: test cycle time high 0.5 s low	OK

3 Additional Information

The EUT was not labeled as required by FCC / IC.

Radiated emissions ICES-003 Issue 7 section 3.2.2 [4]					
Application	Frequency range	Limits	Reference standard	Tested EUT	Status
Radiated Emission Class A	30 to 88 MHz 88 to 216 MHz 216 to 230 MHz 230 to 960 MHz 960 to 1000 MHz above 1000 MHz	50.0 dB(μ V/m) QP at 3 m 54.0 dB(μ V/m) QP at 3 m 56.9 dB(μ V/m) QP at 3 m 57.0 dB(μ V/m) QP at 3 m 60.0 dB(μ V/m) QP at 3 m 60 dB(μ V/m) AV at 3 m and 80 dB(μ V/m) PK at 3 m	ANSI C63.4	-	Not applicable
Radiated Emission Class B	30 to 88 MHz 88 to 216 MHz 216 to 230 MHz 230 to 960 MHz 960 to 1000 MHz above 1000 MHz	40.0 dB(μ V/m) QP at 3 m 43.5 dB(μ V/m) QP at 3 m 46.0 dB(μ V/m) QP at 3 m 47.0 dB(μ V/m) QP at 3 m 54.0 dB(μ V/m) QP at 3 m 54 dB(μ V/m) AV at 3 m and 74 dB(μ V/m) PK at 3 m	ANSI C63.4	1	Passed

Remark: As declared by the applicant the highest internal clock frequency is 6.264 GHz.
Therefore the radiated emission measurement must be carried out up to 5th of the highest internal clock frequency in this case 40 GHz.

The EUT was classified by the applicant as CLASS B equipment.

5 Results

5.1 Radiated emissions

5.1.1 Test method

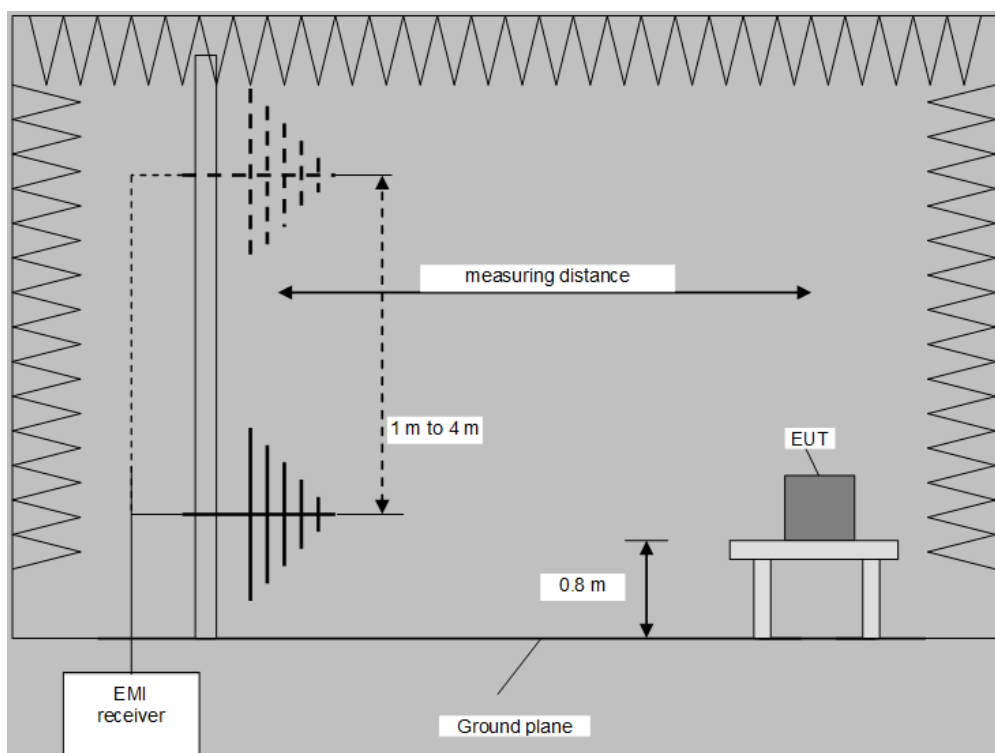

Preliminary and final measurement 30 MHz to 1 GHz

The preliminary and final measurements are performed in a semi-anechoic chamber with a metal ground plane in a 3 m distance.

During the tests the EUT is rotated in the range of 0 ° to 360 °, the measuring antenna is set to horizontal and vertical polarization and raised and lowered in the range from 1 m to 4 m to find the maximum level of emissions.

The resolution bandwidth of the EMI Receiver is set to the following values:

Test	Frequency range	Resolution bandwidth
Preliminary measurement	30 MHz to 1 GHz	100 kHz
Frequency peak search	± 1 MHz	10 kHz
Final measurement	30 MHz to 1 GHz	120 kHz

Procedure preliminary measurement:

The following procedure is used:

- 1) Set the measuring antenna to 1 m height.
- 2) Monitor the frequency range at horizontal polarisation of the measuring antenna and an EUT / turntable azimuth of 0 °.
- 3) Rotate the EUT by 360° to maximize the detected signals.
- 4) Repeat steps 2 to 3 with the vertical polarisation of the measuring antenna.
- 5) Increase the height of the measuring antenna for 0.5 m and repeat steps 2 to 4 until the final height of 4 m is reached.
- 6) The highest values for each frequency are saved by the software, including the measuring antenna height and polarization and the turntable azimuth for that value.

Procedure final measurement:

The following procedure is used:

- 1) Select the highest frequency peaks (lowest margin to the limit) for the final measurement.
- 2) The software determines the exact peak frequencies by doing a partial scan with reduced RBW with ± 10 times the RBW of the pre-scan of the selected peaks.
- 3) If the EUT is portable or ceiling mounted, find the worst-case EUT orientation (x, y, z) for the final test.
- 4) The worst-case measuring antenna height is found via varying the height by ± 0.5 m from the value obtained in the preliminary measurement while monitoring the emission level.
- 5) The worst-case turntable position is found via varying the turntable azimuth by $\pm 30^\circ$ from the value obtained in the preliminary measurement while monitoring the emission level.
- 6) The final measurement is performed at the worst-case measuring antenna height and the worst-case turntable azimuth.
- 7) Steps 2 to 6 are repeated for each frequency peak selected in step 1.

Preliminary and final measurement > 1 GHz

The preliminary and final measurements are performed in a semi-anechoic chamber with floor absorbers between EUT and measuring antenna. The measuring distance is 3 m.

During the tests the EUT is rotated in the range of 0 ° to 360 °, the measuring antenna is set to horizontal and vertical polarization and raised and lowered in the range from 1 m to 4 m to find the maximum level of emissions. While changing the height, the measuring antenna gets tilted so that it is always aiming at the EUT.

The resolution bandwidth of the EMI Receiver is set to the following values:

Test	Frequency range	Resolution bandwidth
Preliminary measurement	1 - 40 GHz	1 MHz
Frequency peak search	± 10 MHz	100 kHz
Final measurement	1 - 40 GHz	1 MHz

Procedure preliminary measurement:

The following procedure is used:

- 1) Set the measuring antenna to 1 m height.
- 2) Monitor the frequency range at horizontal polarisation of the measuring antenna and an EUT / turntable azimuth of 0 °.
- 3) Rotate the EUT by 360° to maximize the detected signals.
- 4) Repeat steps 2 to 3 with the vertical polarisation of the measuring antenna.
- 5) Increase the height of the measuring antenna for 0.5 m and repeat steps 2 to 4 until the final height of 4 m is reached.
- 6) The highest values for each frequency are saved by the software, including the measuring antenna height and polarization and the turntable azimuth for that value.

Procedure final measurement:

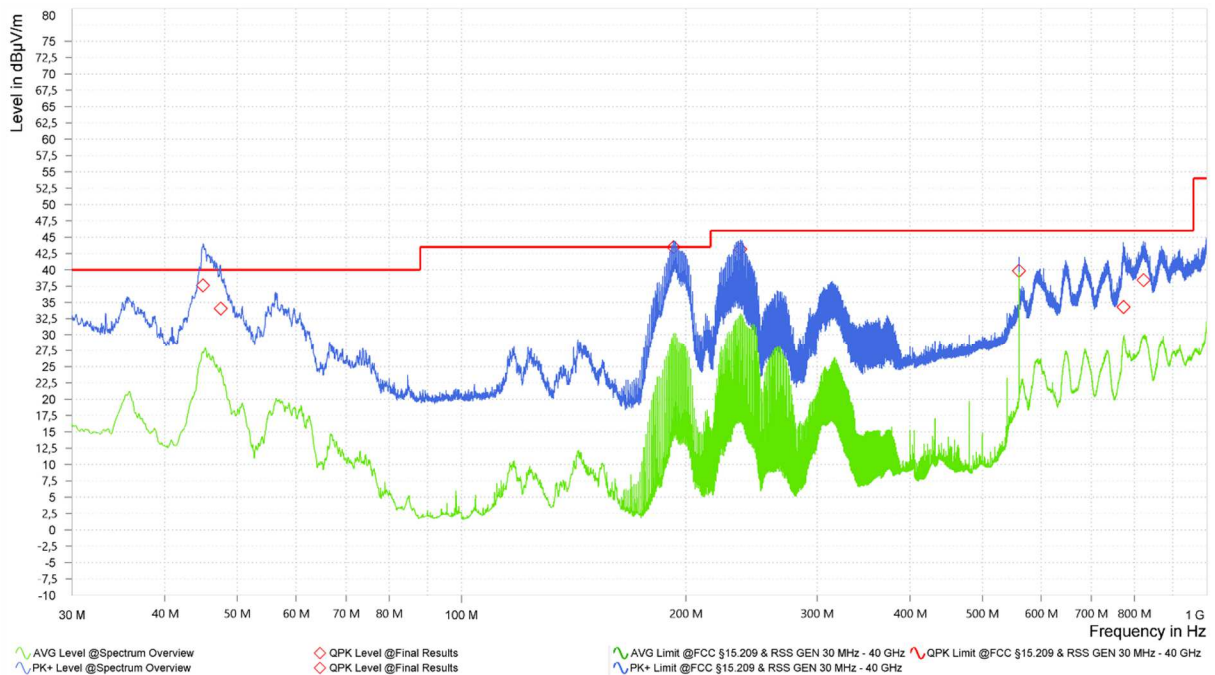

The following procedure is used:

- 1) Select the highest frequency peaks (lowest margin to the limit) for the final measurement.
- 2) The software determines the exact peak frequencies by doing a partial scan with reduced RBW with ± 10 times the RBW of the pre-scan of the selected peaks.
- 3) If the EUT is portable or ceiling mounted, find the worst-case EUT orientation (x,y,z) for the final test.
- 4) The worst-case measuring antenna height is found via varying the height by ± 0.5 m from the value obtained in the preliminary measurement while monitoring the emission level.
- 5) The worst-case turntable position is found via varying the turntable azimuth by $\pm 30^\circ$ from the value obtained in the preliminary measurement while monitoring the emission level.
- 6) The final measurement is performed at the worst-case measuring antenna height and the worst-case turntable azimuth.
- 7) Steps 2 to 6 are repeated for each frequency peak selected in step 1.

5.1.2 Test results final measurement 30 MHz to 1 GHz

Ambient temperature:	23 °C
Relative humidity:	32 %

Date:	01.06.2022
Tested by:	B. ROHDE

The results of the standard subsequent measurement in a semi-anechoic chamber are indicated in the table below. The limits as well as the measured results (levels) refer to the above-mentioned standard while taking account of the specified requirements for a 3 m measuring distance.

Final result limit according to FCC 15.109 Class B

Frequency in MHz	QuasiPeak in dB(µV/m)	Limit in dB(µV/m)	Margin in dB	Meas. Time in ms	Bandwidth in kHz	Height in cm	Pol	Azimuth in deg	Corr. in dB
44.970	37.58	40.00	2.42	1000	120	100	V	74	16.93
47.520	34.04	40.00	5.96	1000	120	100	V	69	15.32
192.600	43.43	43.50	0.07	1000	120	125	H	142	15.17
236.820	43.14	46.00	2.86	1000	120	125	H	105	17.16
559.980	39.85	46.00	6.15	1000	120	100	V	89	25.30
773.310	34.28	46.00	11.72	1000	120	100	H	9	28.42
822.750	38.39	46.00	7.61	1000	120	100	H	-15	29.17

Final result limit according to ICES-003 Issue 7 Class B

Frequency in MHz	QuasiPeak in dB(μ V/m)	Limit in dB(μ V/m)	Margin in dB	Meas. Time in ms	Bandwidth in kHz	Height in cm	Pol	Azimuth in deg	Corr. in dB
44.970	37.58	40.00	2.42	1000	120	100	V	74	16.93
47.520	34.04	40.00	5.96	1000	120	100	V	69	15.32
192.600	43.43	43.50	0.07	1000	120	125	H	142	15.17
236.820	43.14	47.00	3.86	1000	120	125	H	105	17.16
559.980	39.85	47.00	7.15	1000	120	100	V	89	25.30
773.310	34.28	47.00	12.72	1000	120	100	H	9	28.42
822.750	38.39	47.00	8.61	1000	120	100	H	-15	29.17

Test result: Passed

The correction factor was calculated as follows:

Corr. (dB) = cable attenuation (dB) + 6 dB attenuator (dB) + antenna factor (dB)

Therefore. the reading can be calculated as follows:

Reading (dB μ V/m) = result QuasiPeak (dB μ V/m) - Corr. (dB)

Test equipment (please refer to chapter 6 for details)

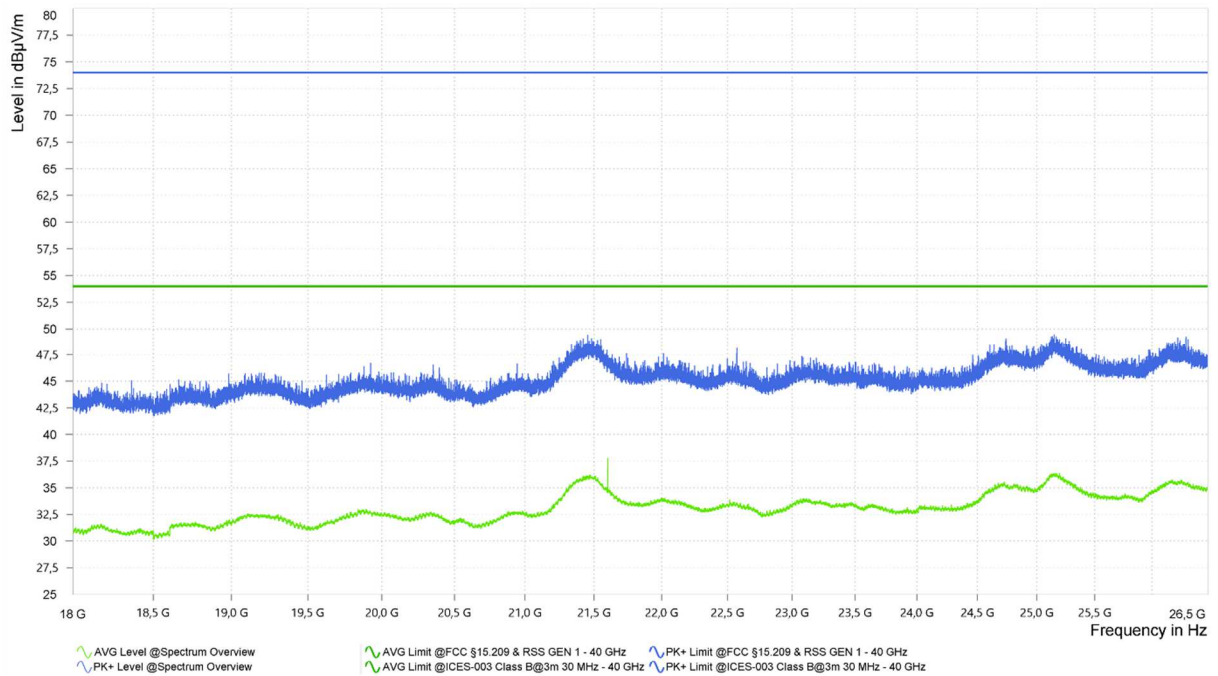

1 - 9

5.1.3 Test results final measurement above 1 GHz

Ambient temperature:	22 °C
Relative humidity:	36 %

Date:	07-08.06.2022
Tested by:	B. ROHDE

The results of the standard subsequent measurement above 1 GHz in a semi-anechoic chamber are indicated in the table below. The limits as well as the measured results (levels) refer to the above-mentioned standard while taking account of the specified requirements for a 3 m measuring distance.

Frequency [MHz]	PK+ Level [dB μ V/m]	PK+ Limit [dB μ V/m]	PK+ Margin [dB]	AVG Level [dB μ V/m]	AVG Limit [dB μ V/m]	AVG Margin [dB]	Correction [dB/m]	Polarization	Azimuth [deg]	Antenna Height [m]	Meas. BW [kHz]	Meas. Time [ms]
5400.000	51.89	74.0	22.11	42.24	54.0	11.76	11.14	H	360	1.33	1000	100
6264.000	51.30	74.0	22.70	40.61	54.0	13.39	12.43	H	355	1.18	1000	100
10800.000	58.75	74.0	15.25	53.71	54.0	0.29	20.97	H	33	1.18	1000	100
12138.500	44.13	74.0	29.87	37.19	54.0	16.81	6.76	V	195	3.25	1000	100
12527.500	45.11	74.0	28.89	38.50	54.0	15.50	6.82	V	-3	2.22	1000	100
16200.000	45.82	74.0	28.18	36.92	54.0	17.08	8.59	H	322	1.15	1000	100

Test result: Passed

The correction factor was calculated as follows:

Corr. (dB/m) = cable attenuation (dB) + preamplifier (dB) + antenna factor (dB/m)

Therefore, the reading can be calculated as follows:

Reading (dB μ V) = result Peak or Average (dB μ V/m) - Corr. (dB/m)

Test equipment (please refer to chapter 6 for details)

3 - 17

5.2 Conducted emissions at antenna port receiver

5.2.1 Test method

Preliminary and final measurement 30 MHz to 5 GHz

The preliminary and final measurements are performed at the antenna port of receivers that operate (tune) in the frequency range 30 to 960 MHz and CB receivers that provide terminals for the connection of an external receiving antenna.

The resolution bandwidth of the EMI Receiver is set to the following values:

Test	Frequency range	Resolution bandwidth
Preliminary measurement	30 MHz to 1 GHz	100 kHz
Final measurement	30 MHz to 1 GHz	120 kHz
Preliminary measurement	1 - 5 GHz	1 MHz
Final measurement	1 - 5 GHz	1 MHz

Spurious emission limits

Frequency range	Maximum power	Bandwidth
30 MHz to 1 GHz	-57 dBm	120 kHz
1 GHz to 5 GHz	-57 dBm	1 MHz

5.2.2 Test results final measurement 30 MHz to 1 GHz

Ambient temperature:	22 °C
Relative humidity:	35 %

Date:	20.06.2021
Tested by:	M.DINTER

Measurement at FM1/AM antenna port

Spurious emissions level				
Frequency [MHz]	Level [dBm]	Limit [dBm]	Margin [dB]	Result
No significant emissions found, all emissions are more than 20 dB below the limit.				

Measurement at DAB/FM2 antenna port

Spurious emissions level				
Frequency [MHz]	Level [dBm]	Limit [dBm]	Margin [dB]	Result
No significant emissions found, all emissions are more than 20 dB below the limit.				

Measurement at SXM antenna port

Spurious emissions level				
Frequency [MHz]	Level [dBm]	Limit [dBm]	Margin [dB]	Result
No significant emissions found, all emissions are more than 20 dB below the limit.				

Test result: Passed
