

Inserting The Sim Card

Your Vsmart Bee 3 is a single SIM smartphone with 1 nano SIM card slot.

Steps to insert your SIM card:

1. Open the back cover.
2. Remove the battery.
3. Insert the nano SIM card into the SIM slot with the gold contacts facing down

4. Insert the battery, ensuring the contacts on the battery match the prongs on the inside of the device.
5. Align the back cover with the camera and press down around the edges to replace the back cover.

⚠ To remove the SIM card easily, please do it carefully by putting in the SIM pin to SIM hole.

Package content

- Device
- USB cable
- Quick start guide
- Warranty card
- Case Cover
- USB charger

⚠ The items supplied with the device may vary by region

Specification

Product	V230
Model	Vsmart Bee 3
CPU	Mediatek MT6739WW 4 core, 28nm, 1.5GHz
Display	6.0" HD+ IPS ratio 18:9
Camera	Front: 5MP Rear: 8MP
Battery	3000mAh
Dimension	163.6x77.2x9.1mm

NOM certification

Importer: xxxxxxxx
Importer's address: xxxxxxxxxxxxxxxxxxxx
Supply voltage: 3.8 Vcc

Correct disposal

This marking on the product, accessories or literature indicates that the product and its electronic accessories (e.g charger, headset, USB cable) should not be disposed of with other household waste. This product is RoHS compliant.

This marking on the battery, manual or packaging indicates that the batteries in this product should not be disposed of with other household waste.

Safety information

Read all safety information before using the device to ensure safe and proper use.

IMEI Information

International Mobile Equipment Identity (IMEI) is a unique code for each device, independent from the phone carrier. IMEI can be obtained at any time, no application needs to be installed. Just enter * # 06 # in the device dialer, and the IMEI number will automatically be shown on the screen. You can also check it on the label inside the product or on the original package.

Radio FM

FM Radio Your device has FM Radio and you can use it at any time without cost. To access this function, follow these steps: Go to the application list, select FM Radio, once you are get into the FM Radio application, you can change frequency with back/next button on the screen.

⚠ Warning

Following the warning information provided below to prevent incidents such as fire or explosion

- Do not expose the device to physical impact or damage.
- Use manufacturer-approved batteries, chargers, accessories.
- Prevent the multipurpose jack and battery terminals from contacting conductive elements, such as metal or liquid.
- If any part of the device is cracked or broken, stop using the device immediately and take it to VinSmart Service Center.
- Do not turn on or use the device when the battery compartment is exposed.

Following the warning below to prevent injury to people or damage to the device

- Do not allow children or animals to chew or suck the device.
- If the device has a camera flash or light, do not use it close to the eyes of people or animals.
- The device can be used in locations with an ambient temperature from 0°C to 40°C. You can store the device at an ambient temperature from -10°C to 50°C. Using or storing the device outside of the recommended temperature range may damage the device and reduce battery's lifespan.
- Do not use your device in a hot environment or near fire.
- Comply with all safety warnings and regulations regarding mobile device usage while operating a vehicle.

To prevent possible hearing damage when using a headset, do not listen to sound at high volume for long periods.

Declaration of Conformity

VINSMART RESEARCH AND MANUFACTURE JOINT STOCK COMPANY, Lot CN1-06B-1&2 Hi-Tech Industrial Park 1, Hoa Lac Hi-Tech Park, Ha Bang, Thach That, Hanoi, Vietnam, declares that this smartphone complies with the provisions of Ministry of Information and Communications (Vietnam).

To view the full Declaration of Conformity, visit VinSmart's website for more information.

For more information

Visit support.vsmart.net to view device information, device warranty, user manual and more.

This quick start guide is provided for reference only. Features and images may differ from the final product, please get the actual product as the standard.

⚠ The user manual may not be available depending on the web browser or service provider.

FCC Statement

1. This device complies with Part 15 of the FCC Rules. Operation is subject to the following two conditions:

(1) This device may not cause harmful interference.

(2) This device must accept any interference received, including interference that may cause undesired operation.

2. Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE:

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to Part 15 of the FCC Rules.

These limits are designed to provide reasonable protection against harmful interference in a residential installation.

This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

Reorient or relocate the receiving antenna.

Increase the separation between the equipment and receiver.

Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

Consult the dealer or an experienced radio/TV technician for help.

SAR Information Statement

Your wireless phone is a radio transmitter and receiver. It is designed and manufactured not to exceed the emission limits for exposure to radiofrequency (RF) energy set by the Federal Communications Commission of the U.S. Government. These limits are part of comprehensive guidelines and establish permitted levels of RF energy for the general population. The guidelines are based on standards that were developed by independent scientific organizations through periodic and thorough evaluation of scientific studies. The standards include a substantial safety margin designed to assure the safety of all persons, regardless of age and health. The exposure standard for wireless mobile phones employs a unit of measurement known as the Specific Absorption Rate, or SAR. The SAR limit set by the FCC is 1.6 W/kg. * Tests for SAR are conducted with the phone transmitting at its highest certified power level in all tested frequency bands. Although the SAR is determined at the highest certified power level, the actual SAR level of the phone while operating can be well below the maximum value. This is because the phone is designed to operate at multiple power levels so as to use only the power required to reach the network. In general, the closer you are to a wireless base station antenna, the lower the power output. Before a phone model is available for sale to the public, it must be tested and certified to the FCC that it does not exceed the limit established by the government adopted requirement for safe exposure. The tests are performed in positions and locations (e.g., at the ear and worn on the body) as required by the FCC for each model. The highest SAR value for this model phone when tested for use at the ear is **0.520W/Kg** and when worn on the body, as described in this user guide, is **1.044W/Kg**(Body-worn measurements differ among phone models, depending upon available accessories and FCC requirements). The maximum scaled SAR in hotspot mode is **1.182W/Kg**. While there may be differences between the SAR levels of various phones and at various positions, they all meet the government requirement for safe exposure. The FCC has granted an Equipment Authorization for this model phone with all reported SAR levels evaluated as in compliance with the FCC RFexposure guidelines. SAR information on this model phone is on file with the FCC and can be found under the Display Grant section of <http://www.fcc.gov/oet/fccid> after searching on FCC ID: **2AVD3-V230LSS** Additional information on Specific Absorption Rates (SAR) can be found on the Cellular Telecommunications Industry Association (CTIA) web-site at <http://www.wow-com.com>. * In the United States and Canada, the SAR limit for mobile phones used by the public is 1.6 watts/kg (W/kg) averaged over one gram of tissue. The standard incorporates a sub-stancial margin of safety to give additional protection for the public and to account for any variations in measurements.

Body-worn Operation

This device was tested for typical body-worn operations. To comply with RF exposure requirements, a minimum separation distance of **10mm** must be maintained between the user's body and the handset, including the antenna. Third-party belt-clips, holsters, and similar accessories used by this device should not contain any metallic components. Body-worn accessories that do not meet these requirements may not comply with RF exposure requirements and should be avoided. Use only the supplied or an approved antenna.
