Radio Spectrum TEST REPORT

Applicant:	SmartAC.com, Inc. 5302 Egbert Street, Houston, TX 77007, United States
Product:	Sensor
Model No.:	SMCOM1A2
Brand Name:	smartAC.com
FCC ID:	2AVMLSMCOM2
Test Method/ Standard:	47 CFR FCC Part 15.249 & ANSI C63.10 2013
Test By:	Intertek Testing Services Taiwan Ltd., Hsinchu Laboratory No. 11, Lane 275, Ko-Nan 1 Street, Chia-Tung Li, Shiang-Shan District, Hsinchu City, Taiwan

This report is for the exclusive use of Intertek's Client and is provided pursuant to the agreement between Intertek and its Client. Intertek's responsibility and liability are limited to the terms and conditions of the agreement. Intertek assumes no liability to any party, other than to the Client in accordance with the agreement, for any loss, expense or damage occasioned by the use of this report. Only the Client is authorized to permit copying or distribution of this report and then only in its entirety. Any use of the Intertek name or one of its marks for the sale or advertisement of the tested material, product or service must first be approved in writing by Intertek. The observations and test results in this report are relevant only to the sample tested. This report by itself does not imply that the material, product, or service is or has ever been under an Intertek certification program.

Revision History

Report No.	Issue Date	Revision Summary
220800294THC-001	Sep. 21, 2022	Same as RF modular, the differences is add accessory connector, after engineer judgment radiated (30MHz~1GHz) emission test were considered necessary and then the other test data based on Report No.: 200700309TWN-001.

Appendix B: Measurement Uncertainty.....	22

Summary of Tests

Test	Reference	Results
20dB Bandwidth/Occupied Bandwidth test	15.215(c)	Pass
Radiated Emission test	15.249(c), 15.209	Pass
Emission on the Band Edge	15.249(d)	Pass
Conducted Emission of AC Power	15.207	N/A
Antenna Requirement	15.203	Pass

Note: Please note that the test results with statement of conformity, the decision rules which are based on: Safety Testing: the specification, standard or IEC Guide 115.

Other Testing: the specification, standard and not taking into account the measurement uncertainty.

TEST REPORT

1. General Information

1.1 Identification of the EUT

Product:	Sensor
Model No.:	SMCOM1A2
Operating Frequency:	2407 MHz ~ 2477 MHz
Channel Number:	8 channels
Frequency of Each Channel:	2407MHz, 2408MHz, 2414MHz, 2425MHz, 2435MHz, 2460MHz, 2469MHz, 2477MHz
Access scheme:	GFSK
Rated Power:	DC 3V from battery
Power Cord:	N/A
Sample receiving date:	1. 2020/07/23 2. 2022/08/29
Sample condition:	Workable
Test Date(s):	1. 2020/07/31 ~ 2020/08/10 2. 2022/09/13

1.2 Antenna description

Antenna Gain : 1.3 dBi
 Antenna Type : PIFA antenna
 Connector Type : Fixed

1.3 Peripherals equipment

Peripherals	Model No.	Serial No.	Data cable
DC Power Supply	TP-1603C	N/A	N/A
Battery	LFB-AA-GRP-FR6	N/A	N/A

2. Test specifications

2.1 Test standard

The EUT was performed according to the procedures in FCC Part 15 Subpart C Paragraph 15.249 for non-spread spectrum devices.

The test of radiated measurements according to FCC Part15 Section 15.33(a) had been conducted and the field strength of this frequency band were all meet limit requirement, thus we evaluate the EUT pass the specified test.

2.2 Operation mode

Power on and press button to select different frequency and modulation.

The signal is maximized through rotation and placement in the three orthogonal axes.

X axis

Y axis

Z axis

After verifying three axes, we found the maximum electromagnetic field was occurred at X axis. The final test data was executed under this configuration.

TEST REPORT

3. 20dB Bandwidth & Occupied Bandwidth test

3.1 Operating environment

Temperature:	27	°C
Relative Humidity:	54	%

3.2 Test setup & procedure

The 20dB Bandwidth & Occupied Bandwidth was measured using a 50 ohm spectrum analyzer with the resolutions bandwidth set at 100 kHz, the video bandwidth \geq RBW, and the SPAN may equal to approximately 2 to 3 times the 20dB bandwidth. The test was performed at 3 channels (lowest, middle and highest channel). The maximum 20dB modulation bandwidth is in the following Table.

3.3 Measured data of modulated bandwidth test results

Single TX

Mode	Channel	Frequency (MHz)	20dB Bandwidth (MHz)
GFSK	Low	2407	0.793
	Mid	2435	0.844
	High	2477	1.008

Please see the plot below.

Single TX

Mode	Channel	Frequency (MHz)	Occupied Channel Bandwidth (MHz)
GFSK	Low	2407	0.987
	Mid	2435	0.981
	High	2477	1.019

Occupied Channel Bandwidth & 20dB Bandwidth @ Ch Low mode

Occupied Channel Bandwidth & 20dB Bandwidth @ Ch Mid mode

Occupied Channel Bandwidth & 20dB Bandwidth @ Ch High mode

4. Radiated emission test FCC 15.249 (C)

4.1 Operating environment

Temperature:	26	°C
Relative Humidity:	59	%

4.2 Test setup & procedure

Radiated emission from 9kHz to 30MHz uses Loop Antenna:

Radiated emission below 1GHz using Bilog Antenna

Radiated emission above 1GHz using Horn Antenna

TEST REPORT

Radiated emissions were investigated cover the frequency range from 30MHz to 1000MHz using a receiver RBW of 120kHz record QP reading, and the frequency over 1GHz using a spectrum analyzer RBW of 1MHz and 10Hz VBW record Average reading. (15.209 paragraph), the Peak reading (1 MHz RBW/ 3 MHz VBW) recorded also on the report.

The EUT for testing is arranged on a turntable. If some peripherals apply to the EUT, the peripherals will be connected to EUT and the whole system. During the test, all cables were arranged to produce worst-case emissions. The signal is maximized through rotation. The height of antenna and polarization is changing constantly for exploring for maximum signal level. The height of antenna can be up to 4 meters and down to 1 meter.

The measurement for radiated emission will be done at the distance of three meters unless the signal level is too low to measure at that distance. In the case of the reading under noise floor, a pre-amplifier is used and/or the test is conducted at a closer distance. And then all readings are extrapolated back to the equivalent three meter reading using inverse scaling with distance.

4.3 Emission limit

4.3.1 Fundamental and harmonics emission limits

Frequency (MHz)	Field Strength of Fundamental		Field Strength of Harmonics	
	(mV/m@3m)	(dBuV/m@3m)	(uV/m@3m)	(dBuV/m@3m)
2400-2483.5	50	94	500	54

TEST REPORT**4.3.2 General radiated emission limits**

Emissions radiated outside of the specified frequency bands, except for harmonics, shall be attenuated by at least 50dB below the level of the fundamental or to the general radiated emission limits in paragraph 15.209, whichever is the lesser attenuation.

Frequency MHz	15.209 Limits (dBμV/m@3m)
30-88	40
88-216	43.5
216-960	46
Above 960	54

Remark:

1. In the above table, the tighter limit applies at the band edges.
2. Distance refers to the distance in meters between the measuring instrument antenna and the closed point of any part of the device or system

4.4 Radiated spurious emission test data**4.4.1 Measurement results: frequency range from 9 kHz to 30 MHz**

The emissions are more than 20 dB below the limit, the value has no need to be reported.

TEST REPORT

4.4.2 Measurement results: frequencies equal to or less than 1 GHz

The test was performed continuously transmitting mode. The worst case occurred at TX middle channel.

EUT: SMCOM1A2
 Worst case: TX middle channel

Ant. Pol. (H/V)	Frequency (MHz)	Spectrum Analyzer Detector	Correction Factor (dB/m)	Reading (dBμV)	Corrected Reading (dBμV/m)	Limit @ 3 m (dBμV/m)	Margin (dB)
