

Remote control dinosaur car function line description:

1. The remote control uses two 1.5V AAA batteries for power supply.
2. After the remote controller is installed with battery and powered on, the LED1 light flashes to indicate the status of code matching. At this time, the U1 IC will automatically transmit an encoded signal, which is formed by C1, L1, and C2 to form an LC filter wave and transmit it through the TX antenna.
3. The remote control does not enter the dormant state if it does not match the code within 30 seconds, and it enters the dormant state if it does not press K1 or K2 within 30 seconds after the code is coded. Press K1 or K2 at will to wake it up.
4. The OFF position turns off all functions and disconnects the power supply.

Frequency list:

Channel	Frequency (MHz)	Channel	Frequency (MHz)	Channel	Frequency (MHz)	Channel	Frequency (MHz)
1	2405	19	2423	37	2441	55	2459
2	2406	20	2424	38	2442	56	2460
3	2407	21	2425	39	2443	57	2461
4	2408	22	2426	40	2444	58	2462
5	2409	23	2427	41	2445	59	2463
6	2410	24	2428	42	2446	60	2464
7	2411	25	2429	43	2447	61	2465
8	2412	26	2430	44	2448	62	2466
