

line description:

The remote control is powered by two 1.5V AA batteries.

After the remote control is powered on by the battery, the LED1 light flashes, indicating the code matching status, at which time the U1 IC will automatically transmit a coding signal and transmit it through the TX antenna.

After the code is applied, the remote control LED1 is extinguished, and the remote control forward button is held long to send out a signal through the antenna.

Press the spray button on the remote control to send a signal to be transmitted through the antenna.

Press and hold the wing button on the remote control to send out a signal through the antenna.

The remote control does not enter the sleep state within 3 minutes of the upper code, and does not press any button to enter the sleep state after 3 minutes after the code is loaded, and any button can be awakened.

The OFF position turns off all functions and disconnects the power supply.

frequency: 2405-2475MHz

Operation Frequency Detail:

Channel	Frequency (MHz)	Channel	Frequency (MHz)
1	2405	3	2475
2	2440	/	/
