

Function Description:

Launch:

1. Power supply 3V to 2.4G main control chip, crystal oscillator to 2.4G main control to provide external frequency.
2. Before operation, after operation, left and right functions are coded by the master control, the signal is modulated and amplified by 2.4G, and then transmitted by the antenna.

Frequency Range 2405-2475MHz

Frequency list

Channel	Frequency (MHz)
1	2405
2	2440
3	2475
