## FCC §15.247 (i), §2.1091 - RF Exposure

FCC ID: 2AW95LL18001144
Applied procedures / limit
According to FCC $\S 15.247$ (i) and $\S 1.1307(\mathrm{~b})(1)$, systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

## MPE PREDICTION

Predication of MPE limit at a given distance, Equation from OET Bulletin 65, Edition 97-01

$$
\mathrm{S}=\mathrm{PG} / 4 \pi \mathrm{R}^{2}
$$

Where: S = power density
$\mathrm{P}=$ power input to antenna
$G=$ power gain of the antenna in the direction of interest relative to an isotropic radiator
$R=$ distance to the center of radiation of the antenna, $R=20 \mathrm{~cm}$
