EUT Description : LED Wireless Charging Bluetooth Speaker

(A) Model No. : BT3401, BT2301

(B) Trademark : /

Measurement Standard Used:

FCC CFR Title 47 Part 15 Subpart C

FCC KDB 680106 D01 RF Exposure Wireless Charging Apps v03r01

The device described above is tested by Shenzhen Alpha Product Testing Co., Ltd. to determine the maximum emission levels emanating from the device and the severe levels of the device can endure and its performance criterion. The test results are contained in this test report and Shenzhen Alpha Product Testing Co., Ltd. is assumed full responsibility for the accuracy and completeness test. Also, this report shows that the EUT is technically compliant with the KDB 680106 D01 requirements.

This report applies to above tested sample only. This report shall not be reproduced in parts without written approval of Shenzhen Alpha Product Testing Co., Ltd.

1. Test Result Summary

| Requirement | CFR 47 Section | Result | |
|-------------|---------------------------|--------|--|
| RF EXPOSURE | §1.1307(b)(1) & KDB680106 | PASS | |

Note:

- 1. PASS: Test item meets the requirement.
- 2. Fail: Test item does not meet the requirement.
- 3. N/A: Test case does not apply to the test object.
- 4. The test result judgment is decided by the limit of test standard.

2. EUT Description

2.1. Description of Device (EUT)

EUT Name : LED Wireless Charging Bluetooth Speaker

Model No. : BT3401, BT2301

DIFF.

There is no difference except the name of the model. All tests are made

with the BT3401 model.

Power supply : DC 9V from USB and DC 3.7V from battery.

EUT information : INPUT: 9V==2A

OUTPUT: 5W/7.5W/10W/15W

Operation frequency : 115~205KHz

Modulation : MSK

Antenna Type : Coil Antenna, Maximum Gain is 0dBi

(This value is supplied by applicant).

Software version : V1.0

Hardware version : V1.0

Intend use environment : Residential, commercial and light industrial environment

| Conditions requirement | Answers |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------|
| Power transfer frequency is less than 1 MHz. | After measuring the product the transfer frequency is 0.115-0.205MHz |
| Output power from each primary coil is less than or equal to 15 watts. | After measuring the product the each primary coil power is 15 watts |
| The system may consist of more than one source primary coils, charging one or more clients. If more than one primary coil is present, the coil pairs may be powered on at the same time. | The transfer system includes only single primary. |
| Client device is placed directly in contact with the transmitter. | Client device is placed directly in contact with the transmitter. |
| Mobile exposure conditions only (portable exposure conditions are not covered by this exclusion). | Mobile exposure conditions |
| The aggregate H-field strengths at 15 cm surrounding the device and 20 cm above the top surface from all simultaneous transmitting coils are demonstrated to be less than 50% of the MPE limit. | After measuring the product the Max H-field Strength is 0.805 A/m Far less than 50% of the MPE limit. |

3.1. RF Exposure Test

3.1.1. Test Specification

| Test Requirement: | FCC Rules and Regulations KDB680106 | | | |
|-------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|--|--|
| Test Method: | §1.1307(b)(1) & KDB680106 | | | |
| Limits: | According to §1.1307(b)(1), systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines. According to §1.1310 and §2.1093 RF exposure is calculated. According KDB680106 D01v03r01: RF Exposure Wireless Charging. | | | |
| Test Setup: | B E-Field & B-Field Probe | | | |
| Test Mode: | Wireless charging load has been charge at no load, middle load and full load. All test modes were pre-tested, but we only recorded the worse case in this report. | | | |
| Test Procedure: | The RF exposure test was performed in shielded chamber The measurement probe was placed at test distance(15cm) which is between the edge of the charger and the geometric centre of probe. The measurement probe used to search of highest strength. The highest emission level was recorded and compared with limit as soon as measurement of each points (A,B,C,D,E,F) were completed. The EUT were measured according to the dictates of KDB 680106 DR03-44118. | | | |
| Test Result: | PASS | | | |
