

Xingtel (Xiamen) Intelligent Control Technology Co.,Ltd

RF TEST REPORT

Report Type:

FCC Part 15.519 RF report

Model:

Forecaddy Remote

REPORT NUMBER:

200302211SHA-001

ISSUE DATE:

April 27, 2020

DOCUMENT CONTROL NUMBER:

TTRF15.519-01_V1 © 2018 Intertek

Applicant: Xingtel (Xiamen) Intelligent Control Technology Co.,Ltd
Xingtel Building, Torch Industrial District, Xiamen 361006, P R China

Manufacturer: Xingtel (Xiamen) Intelligent Control Technology Co.,Ltd
Xingtel Building, Torch Industrial District, Xiamen 361006, P R China

Factory: Xingtel (Xiamen) Intelligent Control Technology Co.,Ltd
Xingtel Building, Torch Industrial District, Xiamen 361006, P R China

FCC ID: 2AWAX-REMOTE

SUMMARY:

The equipment complies with the requirements according to the following standard(s) or Specification:

47CFR Part 15 (2019): Radio Frequency Devices (Subpart F)

ANSI C63.10 (2013): American National Standard of Procedures for Compliance Testing of Unlicensed Wireless Devices

PREPARED BY:

Project Engineer
Nemo Li

REVIEWED BY:

Reviewer
Daniel Zhao

This report is for the exclusive use of Intertek's Client and is provided pursuant to the agreement between Intertek and its Client. Intertek's responsibility and liability are limited to the terms and conditions of the agreement. Intertek assumes no liability to any party, other than to the Client in accordance with the agreement, for any loss, expense or damage occasioned by the use of this report. Only the Client is authorized to permit copying or distribution of this report and then only in its entirety. Any use of the Intertek name or one of its marks for the sale or advertisement of the tested material, product or service must first be approved in writing by Intertek. The observations and test results in this report are relevant only to the sample tested. This report by itself does not imply that the material, product, or service is or has ever been under an Intertek certification program.

1 GENERAL INFORMATION

1.1 Description of Equipment Under Test (EUT)

Product name:	Golf Cart Remotes
Type/Model:	Forecaddy Remote
Description of EUT:	EUT is a remote control with UWB function, and has only one model.
Rating:	DC 3.7V
EUT type:	☒ Table top ☐ Floor standing
Software Version:	/
Hardware Version:	/
Sample received date:	April 3, 2020
Date of test:	April 3, 2020 ~ April 26, 2020

1.2 Technical Specification

Channel frequency:	6489.6MHz
Operating frequency band:	6240MHz - 6739.2MHz
Antenna Information:	Integrated antenna

TEST REPORT

1.3 Description of Test Facility

Name:	Intertek Testing Services Shanghai
Address:	Building 86, No. 1198 Qinzhou Road(North), Shanghai 200233, P.R. China
Telephone:	86 21 61278200
Telefax:	86 21 54262353

The test facility is recognized, certified, or accredited by these organizations:	CNAS Accreditation Lab Registration No. CNAS L0139
	FCC Accredited Lab Designation Number: CN1175
	IC Registration Lab CAB identifier.: CN0051
	VCCI Registration Lab Registration No.: R-14243, G-10845, C-14723, T-12252
	A2LA Accreditation Lab Certificate Number: 3309.02

2 TEST SPECIFICATIONS

2.1 Standards or specification

47CFR Part 15 (2019)

ANSI C63.10 (2013)

2.2 Mode of operation during the test

While testing transmitting mode of EUT, the normal and continuously transmission was applied.

2.3 Test software list

Test Items	Software	Manufacturer	Version
Conducted emission	ESxS-K1	R&S	V2.1.0
Radiated emission	ES-K1	R&S	V1.71

2.4 Test peripherals list

Item No.	Name	Band and Model	Description

2.7 Measurement uncertainty

The measurement uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

Test item	Measurement uncertainty
Maximum peak output power	$\pm 0.74\text{dB}$
Radiated Emissions below 1GHz	$\pm 4.90\text{dB}$
Radiated Emissions above 1GHz	$\pm 5.02\text{dB}$
Power line conducted emission	$\pm 3.19\text{dB}$

TEST REPORT**3 UWB bandwidth****Test result: Pass****3.1 Limit**

FCC 15.503(d) Has a fractional bandwidth equal to or greater than 0.20 or has a UWB bandwidth equal to or greater than 500 M Hz, regardless of the fractional bandwidth.

FCC 15.519(3)(b) The UWB bandwidth of a device operating under the provisions of this section must be contained between 3100 MHz and 10,600 MHz.

3.2 Measurement Procedure

- a) Set the centre frequency of the channel under test
- b) Set RBW = 1MHz.
- c) Set VBW $\geq 3 \times$ RBW.
- d) Detector = Peak.
- e) Trace mode = max hold.
- f) Sweep = auto couple.
- g) Allow the trace to stabilize.
- h) Measure the maximum width of the emission that is constrained by the frequencies associated with the two outermost amplitude points (upper and lower frequencies) that are attenuated by 10 dB relative to the maximum level measured in the fundamental emission.

3.3 Test Configuration

TEST REPORT

3.4 Test Results of UWB bandwidth

Channel Frequency (MHz)	Measured Frequencies		10dB Bandwidth	Limit (MHz)	Pass/Fail
	FL (MHz)	FH (MHz)			
6489.6	6176	6683	507	FL > 3100 and FH < 10600	Pass

4 Cease of transmitting time

Test result: Pass

4.1 Limit

The UWB intentional radiator shall cease transmission within 10 seconds unless it receives an acknowledgement from the associated receiver that its transmission is being received. An acknowledgment of reception must continue to be received by the UWB intentional radiator at least every 10 seconds or the UWB device must cease transmitting.

4.2 Measurement Procedure

- a) EUT was set to normal operation with companion device.
- b) The emission was captured by a spectrum analyzer.
- c) Switching off the companion device.
- d) Measure the time from the moment of switching off the companion device to the moment of stopping transmitting.
- e) Compare the time with the limit.

4.3 Test Configuration

TEST REPORT

4.4 Test Results of Cease of transmitting time

Channel Frequency (MHz)	Measurement result (s)	Maximum Limit (s)	Pass/Fail
6489.6	5.00	10	Pass

Marker 1: The moment of switching off the companion.
Marker 2: The moment of stopping transmitting.

5 Peak level of the emissions

Test result: Pass

5.1 Limit

There is a limit on the peak level of the emissions contained within a 50 MHz bandwidth centered on the frequency at which the highest radiated emission occurs, fM. That limit is 0 dBm EIRP.

When a peak measurement is required, it is acceptable to use a resolution bandwidth other than the 50 MHz specified in this subpart. This resolution bandwidth shall not be lower than 1 MHz or greater than 50 MHz. If a resolution bandwidth other than 50 MHz is employed, the peak EIRP limit shall be $20 \log (RBW/50)$ dBm where RBW is the resolution bandwidth in megahertz that is employed. This may be converted to a peak field strength level at 3 meters using:
 $E(dBuV/m) = P(dBm \text{ EIRP}) + 95.2$.

When the test RBW=3 MHz, the EIRP limit should be $0+20\log(3/50) = -24.44$ dBm

5.2 Measurement Procedure

1. The EUT was placed on the top of a rotating table 1.5 meters above the ground at a 3 meters semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.
2. The antenna is a broadband antenna, and its height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
3. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
4. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.
5. Find the maximum emission and compare to the limit.

5.3 Test Configuration

5.4 Peak level of the emissions

Channel Frequency (MHz)	Antenna polarization	Power (dBm EIRP)	Limit (dBm EIRP)	Margin (dBm)
6489.6	Horizontal	-5.50	0	5.50
6489.6	Vertical	-7.50	0	7.50

6 Radiated Emissions

Test result: Pass

6.1 Limit

- a) The radiated emissions at or below 960 MHz from a device operating under the provisions of this section shall not exceed the emission levels in §15.209.

Frequencies (MHz)	Field Strength (microvolts/meter)	Measurement Distance (meters)
0.009 ~ 0.490	2400/F(kHz)	300
0.490 ~ 1.705	24000/F(kHz)	30
1.705 ~ 30.0	30	30
30 ~ 88	100	3
88 ~ 216	150	3
216 ~ 960	200	3

- b) The radiated emissions above 960 MHz from a device operating under the provisions of this section shall not exceed the following average limits when measured using a resolution bandwidth of 1 MHz:

Frequencies (MHz)	EIRP (dBm)
960-1610	-75.3
1610-1990	-63.3
1990-3100	-61.3
3100-10600	-41.3
Above 10600	-61.3

- c) The In addition to the radiated emission limits specified in the table in paragraph (a) (b) of this section, UWB transmitters operating under the provisions of this section shall not exceed the following average limits when measured using a resolution bandwidth of no less than 1 kHz:

Frequencies (MHz)	EIRP (dBm)
1164-1240	-85.3
1559-1610	-85.3

TEST REPORT**6.2 Measurement Procedure**

1. The EUT was placed on the top of a rotating table 0.8 meters (below 960MHz) and 1.5 meters (above 960MHz) above the ground at a 3 meters semi-anechoic chamber. The table was rotated 360 degrees to determine the position of the highest radiation.
2. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
3. The antenna is a broadband antenna, and its height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
4. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
5. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.
6. For below 30MHz, a loop antenna with its vertical plane is placed 3m from the EUT and rotated about its vertical axis for maximum response at each azimuth about the EUT. And the centre of the loop shall be 1m above the ground.
7. During the test, each emission was maximized by: having the EUT continuously working, investigated all operating modes, rotated about all 3 axis (X, Y & Z) and considered typical configuration to obtain worst position, manipulating interconnecting cables. The turntable was rotated to maximize the emission level.

NOTE:

1. The resolution bandwidth of test receiver/spectrum analyzer is 120KHz and video bandwidth is 300kHz for Quasi-peak detection at frequency below 960MHz.
2. The resolution bandwidth of test receiver/spectrum analyzer is 1MHz and video bandwidth is 3MHz for Average detection at frequency above 960MHz.
3. The resolution bandwidth of test receiver/spectrum analyzer is 1kHz and the video bandwidth is 3KHz for Average detection at frequency range from 1164-1240MHz & 1559-1610MHz.

6.3 Test Configuration

For Radiated emission below 30MHz:

For Radiated emission 30MHz to 1GHz:

For Radiated emission above 1GHz:

6.4 Test Results of Radiated Emissions

The low frequency, which started from 9 kHz to 30MHz, was pre-scanned and the result which was 20dB lower than the limit line per 15.31(o) was not reported.

EUT was tested with X, Y, Z direction and the worst data was listed in the report.

Test data below 960MHz

Horizontal

Vertical

Antenna	Frequency (MHz)	Corrected Reading (dBuV/m)	Correct Factor (dB/m)	Limit (dBuV/m)	Margin (dB)	Detector
H	30.00	20.7	18.8	40	19.3	PK

TEST REPORT

Test result above 960MHz:

The emission was conducted from 960MHz to 40GHz:

Channel Frequency (MHz)	Antenna	Emission Frequency (MHz)	Emission Level (dBm)	Limit (dBm)	Margin (dB)	Detector
6489.6	H	1007.33	-75.70	-75.3	0.70	RMS
6489.6	H	1981.62	-73.30	-63.3	10.00	RMS
6489.6	H	2508.30	-71.10	-61.3	9.80	RMS
6489.6	H	6451.70	-54.20	-41.3	12.90	RMS
6489.6	H	6556.91	-54.10	-41.3	12.80	RMS
6489.6	H	11371.14	-67.90	-61.3	6.60	RMS
6489.6	V	1106.35	-76.60	-75.3	1.30	RMS
6489.6	V	1980.82	-73.90	-63.3	10.60	RMS
6489.6	V	2584.60	-71.40	-61.3	10.10	RMS
6489.6	V	6451.80	-56.10	-41.3	14.80	RMS
6489.6	V	6556.91	-56.00	-41.3	14.70	RMS
6489.6	V	12305.41	-67.70	-61.3	6.40	RMS

Test result in GPS Bands:

Channel Frequency (MHz)	Antenna	Emission Frequency (MHz)	Emission Level (dBm)	Limit (dBm)	Margin (dB)	Detector
6489.6	H	1190.35	-93.90	-85.3	8.60	RMS
6489.6	H	1601.82	-92.90	-85.3	7.60	RMS
6489.6	V	1198.27	-94.80	-85.3	9.50	RMS
6489.6	V	1609.39	-94.10	-85.3	8.80	RMS

- Remark: 1. Correct Factor = Antenna Factor + Cable Loss (+ Amplifier, for higher than 1GHz), the value was added to Original Receiver Reading by the software automatically.
2. Corrected Reading = Original Receiver Reading + Correct Factor
3. Margin = Limit - Corrected Reading
4. If the PK Corrected Reading is lower than AV limit, the AV test can be elided.

Example: Assuming Antenna Factor = 30.20dB/m, Cable Loss = 2.00dB,
Gain of Preamplifier = 32.00dB, Original Receiver Reading = 10.00dBuV,

TEST REPORT

Limit = 40.00dBuV/m.

Then Correct Factor = $30.20 + 2.00 - 32.00 = 0.20\text{dB/m}$;

Corrected Reading = $10\text{dBuV} + 0.20\text{dB/m} = 10.20\text{dBuV/m}$;

Margin = $40.00\text{dBuV/m} - 10.20\text{dBuV/m} = 29.80\text{dB}$.

7 Power line conducted emission

Test result: Pass

7.1 Limit

Frequency of Emission (MHz)	Conducted Limit (dBuV)	
	QP	AV
0.15-0.5	66 to 56*	56 to 46 *
0.5-5	56	46
5-30	60	50
* Decreases with the logarithm of the frequency.		

7.2 Test Configuration

TEST REPORT**7.3 Measurement Procedure**

Measured levels of ac power-line conducted emission shall be the emission voltages from the voltage probe, where permitted, or across the 50 Ω LISN port (to which the EUT is connected), where permitted, terminated into a 50 Ω measuring instrument. All emission voltage and current measurements shall be made on each current-carrying conductor at the plug end of the EUT power cord by the use of mating plugs and receptacles on the LISN, if used. Equipment shall be tested with power cords that are normally supplied or recommended by the manufacturer and that have electrical and shielding characteristics that are the same as those cords normally supplied or recommended by the manufacturer. For those measurements using a LISN, the 50 Ω measuring port is terminated by a measuring instrument having 50 Ω input impedance. All other ports are terminated in 50 Ω loads.

Tabletop devices shall be placed on a platform of nominal size 1 m by 1.5 m, raised 80 cm above the reference ground plane. The vertical conducting plane or wall of an RF-shielded (screened) room shall be located 40 cm to the rear of the EUT. Floor-standing devices shall be placed either directly on the reference ground-plane or on insulating material as described in ANSI C63.4. All other surfaces of tabletop or floor-standing EUTs shall be at least 80 cm from any other grounded conducting surface, including the case or cases of one or more LISNs.

The bandwidth of the test receiver is set at 9 kHz.

7.4 Test Results of Power line conducted emission

N Line

- Remark: 1. Correct Factor = LISN Factor + Cable Loss, the value was added to Original Receiver Reading by the software automatically.
 2. Corrected Reading = Original Receiver Reading + Correct Factor
 3. Margin = Limit - Corrected Reading
 4. If the PK Corrected Reading is lower than AV limit, the AV test can be elided.

8 Antenna requirement

Requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this section.

Result:

EUT uses permanently attached antenna to the intentional radiator, so it can comply with the provisions of this section.

***** END *****
