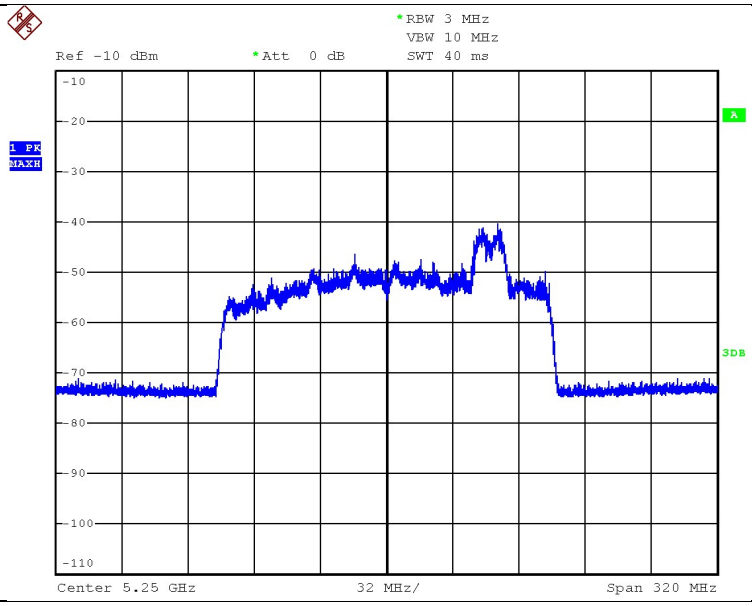
6.2.4 Non- Occupancy Period

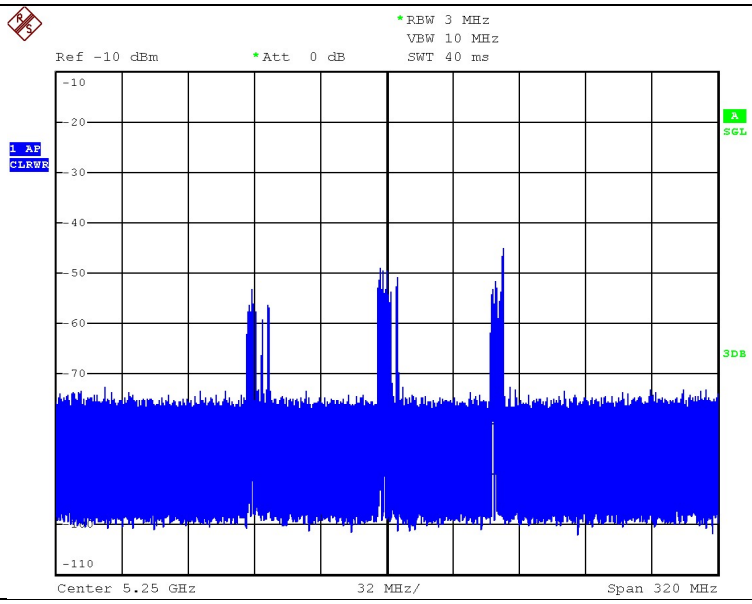
5G_Low

1) Test results demonstrating an associated client link is established with the master on a test frequency.



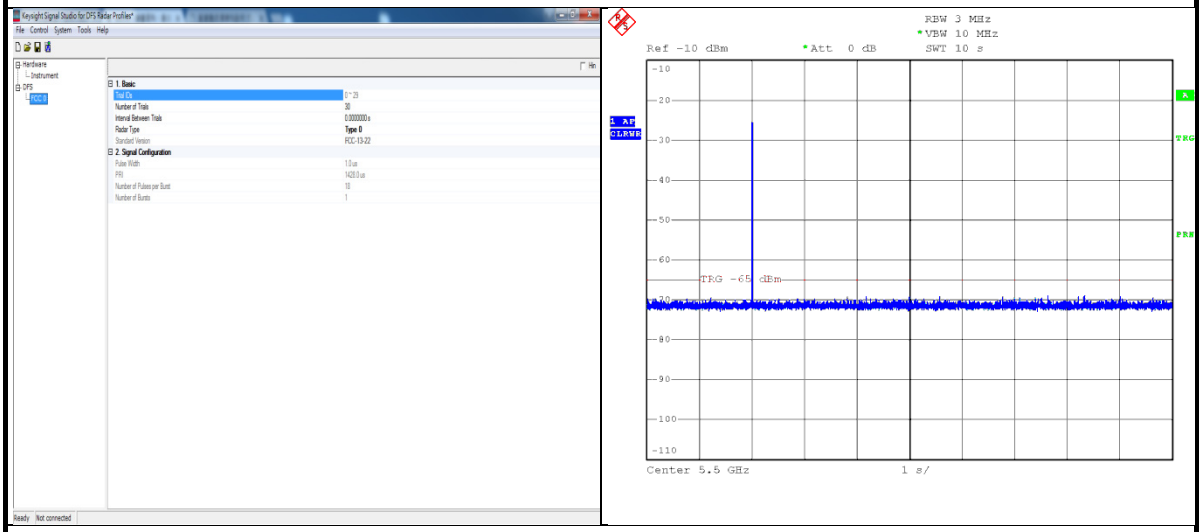
EUT (Client) links with Master on 5250MHz

2) The client and DFS-certified master device are associated, and system testing will be performed with channel-loading for a non-occupancy period test.



Client performed with channel-loading via master.

3). The device transmits one type of radar as specified in the DFS Order.

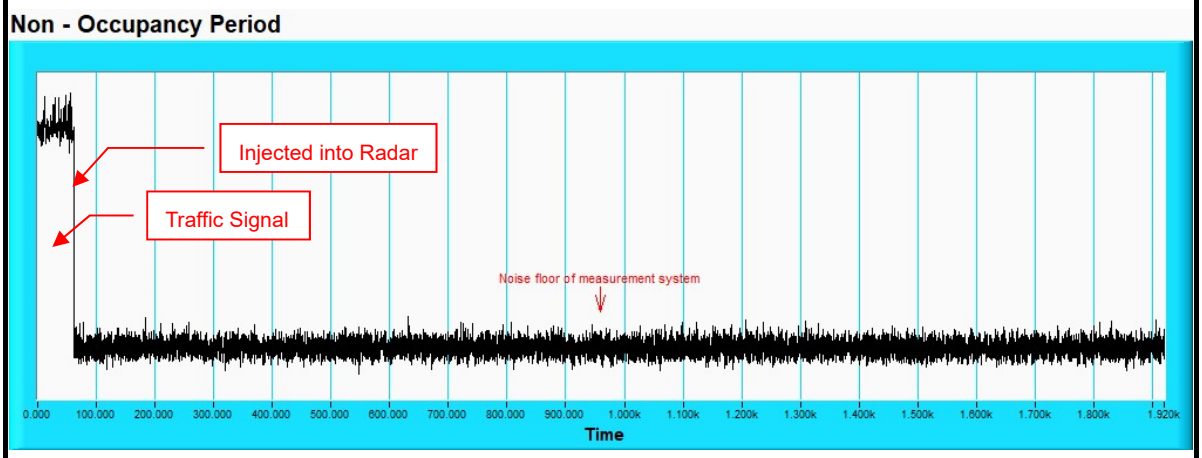


Radar 0 is used to test during DFS testing.

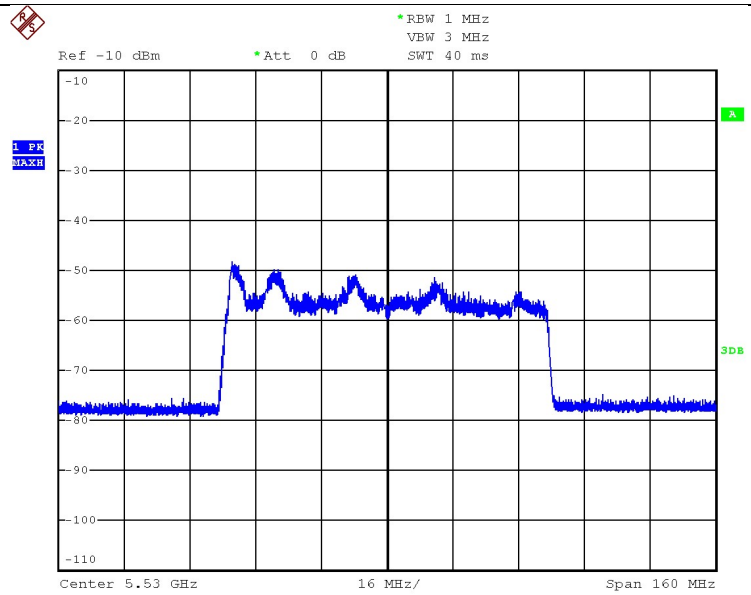
4) The test frequency has been monitored to ensure no transmission of any type has occurred for 30 minutes;

Note: If the client moves with the master, the device is considered compliant if nothing appears in the client non-occupancy period test. For devices that shut down (rather than moving channels), no beacons should appear;

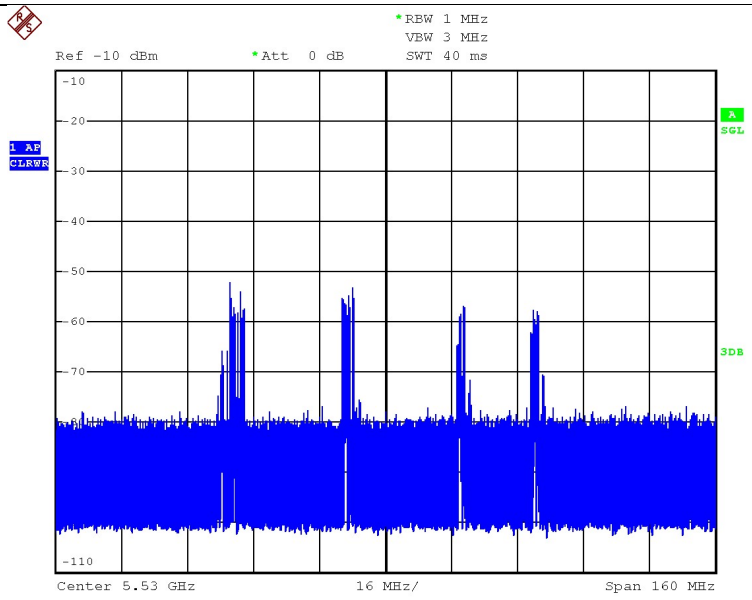
5) An analyzer plot that contains a single 30-minute sweep on the original test frequency.



5G_High

1) Test results demonstrating an associated client link is established with the master on a test frequency.


EUT (Client) links with Master on 5530MHz

2) The client and DFS-certified master device are associated, and system testing will be performed with channel-loading for a non-occupancy period test.


Client performed with channel-loading via master.
