Description of Permissive Change

The application is prepared for FCC class III permissive change. The differences with the original application are:

1. Adding DFS band (5250 ~ 5320 MHz, 5500 ~ 5720 MHz) via software (Software/ Firmware version: DFS_CERT_20230918), and

2. Enabling bandwidth 160 MHz mode via software (Software/ Firmware version: DFS_CERT_20230918).

SpaceX software configures the Wi-Fi router while communicating with the Starlink network. Software is installed in the router and automatically updates without end-user's intervention. Firmware is set and updated by the SpaceX Starlink network and is not end-user accessible.

 Both devices, original and updated versions, are electrically identical in all aspects except the abovementioned.

Regards,

Trista
