# FCC ID: 2AWL2-JRZS246

| Product Name:      | Dual-coil wireless car charge holder                                       |
|--------------------|--|
| Product Model No.: | JR-ZS246   |
| Transmitting mode  | Keep the EUT in continuously wireless charging mode                        |
| Power supply:      | Input: DC 5V/2A, 9V/2A, 12V/2A<br>Wireless Output: 5W, 7.5W, 10W, 15W(MAX) |

| Test Modes:   |           |  |  |
|---|-----------|--|--|
| Mode 1  | Full load |  |  |
| Mode 2  | Half load |  |  |
| Mode 3  | No load   |  |  |
| Note: All modes have been tested and the report only shows the data for the worst working mode. |           |  |  |

# **RF Exposure Evaluation**

# 1 Measuring Standard

KDB 680106 RF Exposure Wireless Charging Apps v03r01

### 2 Requirements

According to the item 5 of KDB 680106 v03r01:

Inductive wireless power transfer applications that meet all of the following requirements are excluded from submitting an RF exposure evaluation.

| (1) Power transfer frequency is less than 1MHz.          | Yes; the device operate in the frequency range from   |
|--|---|
|  | 115 KHz to 205 KHz                                    |
| (2) Output power from each primary coil is less than     | Yes; the maximum output power of the primary coil is  |
| or equal to 15 watts.                                    | 15W.  |
| (3) The system may consist of more than one source       | Yes; the transfer system includes only single primary |
| primary coils, charging one or more clients. If more     | coils.  |
| than one primary coil is present, the coil pairs may be  |   |
| powered on at the same time.                             |   |
| (4) Client device is placed directly in contact with the | Yes; Client device is placed directly in contact with |
| transmitter.   | the transmitter.                                      |
| (5) Mobile exposure conditions only (portable            | Yes, mobile exposure conditions only.                 |
| exposure conditions are not covered by this              |   |
| exclusion).  |   |
| (6) The aggregate H-field strengths anywhere at or       | Yes, see test result in item 6.                       |
| beyond 15 cm surrounding the device, and 20 cm           |   |
| away   |   |

from the surface from all coils that by design can simultaneously transmit, and while those coils are simultaneously energized, are demonstrated to be less than 50% of the applicable MPE limit. Remark: Meet all the above requirements.

#### Limits

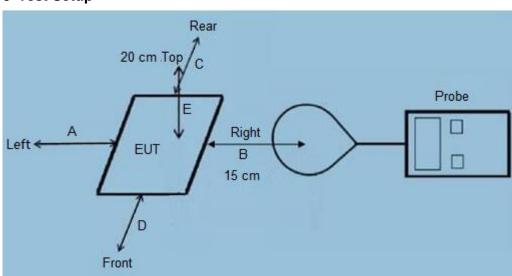

The criteria listed in the following table shall be used to evaluate the environment impact of human exposure to radio frequency (RF) radiation as specified in 1.1307(b)

Limits for Maximum Permissible Exposure (MPE)

| Frequency range<br>(MHz) | uency range (MHz) Electric field strength (V/m) Magnetic field strength (A/m) |        | Power density<br>(mW/cm²) | Averaging time (minutes) |  |  |
|--------------------------|---|--------|---------------------------|--------------------------|--|--|
|                          | (A) Limits for Occupational/Controlled Exposures                              |        |                           |                          |  |  |
| 0.3-3.0                  | 614   | 1.63   | *(100)                    | 6                        |  |  |
| 3.0-30                   | 1842/f  | 4.89/f | *(900/f <sup>2</sup> )    | 6                        |  |  |
| 30-300                   | 61.4  | 0.163  | 1.0                       | 6                        |  |  |
| 300-1500                 | 1   | 1      | f/300                     | 6                        |  |  |
| 1500-100,000             | /   | 1      | 5                         | 6                        |  |  |
|                          | (B) Limits for General Population/Uncontrolled Exposure                       |        |                           |                          |  |  |
| 0.3-1.34                 | 614   | 1.63   | *(100)                    | 30                       |  |  |
| 1.34-30                  | 824/f   | 2.19/f | *(180/f <sup>2</sup> )    | 30                       |  |  |
| 30-300                   | 27.5  | 0.073  | 0.2                       | 30                       |  |  |
| 300-1500                 | /   | 1      | f/1500                    | 30                       |  |  |
| 1500-100,000             | /   | /      | 1.0                       | 30                       |  |  |

RF exposure compliance will need to be determined with respect to 1.1307(c) and (d) of the FCC rules. The emissions should be within the limits at 300kHz in Table 1 of 1.1310(use the 300kHz limits for 150kHz:614V/m,1.63A/m).

#### 3 Test Setup

#### **4 Test Procedure**

- 1) The RF exposure test was performed in anechoic chamber.
- 2) The measurement probe was placed at test distance (15 cm from all sides and 20 cm from the top) which is between the edge of the charger and the geometric center of probe.
- 3) The highest emission level was recorded and compared with limit as soon as measurement of each points (A, B, C, D, E) were completed.
- 4) The EUT was measured according to the dictates of KDB 680106 v03r01.

Remark: The EUT's test position A, B, C, D and E is valid for the E and H field measurements.

F=frequency in MHz \*=Plane-wave equivalent power density

# **5 Description of Support Units**

Mobile phone (Provide by test lab):

Manufacturer: SAMSUNG Model: Galaxy S21 5G

#### **6 Test Instruments list**

| Test Equipment        | Manufacturer | Model No.                    | SN.    | Cal.Date      | Cal.Due date  |
|-----------------------|--------------|------------------------------|--------|---------------|---------------|
|                       |              |                              |        | (mm-dd-yy)    | (mm-dd-yy)    |
| Exposure Level Tester | Narda        | ELT-400                      | N-0231 | June. 26 2021 | June. 25 2022 |
| Magnetic field probe  | NI I-        | EL T                         | N40075 | 1 00 0004     | 1 05 0000     |
| 100cm <sup>2</sup>    | Narda        | ELT probe 100cm <sup>2</sup> | M0675  | June. 26 2021 | June. 25 2022 |
| Field Probe           | ETS          | HI-6105                      | /      | June. 24 2021 | June. 23 2022 |
| Laser Data Interface  | ETS          | HI-6113                      | /      | June. 24 2021 | June. 23 2022 |

#### 7 Test Result

# E-Filed Strength at 15 cm from the edges surrounding the EUT (V/m)

| Frequency Range | Test       | Test       | Test       | Test       | Limits |
|-----------------|------------|------------|------------|------------|--------|
| (MHz)           | Position A | Position B | Position C | Position D | (V/m)  |
| 0.115-0.205     | 0.34       | 0.41       | 0.56       | 0.39       | 614    |

### E-Filed Strength at 20 cm from the top of the EUT (V/m)

| Frequency Range | Test       | Limits |
|-----------------|------------|--------|
| (MHz)           | Position E | (V/m)  |
| 0.115-0.205     | 0.31       | 614    |

# H-Filed Strength at 15 cm from the edges surrounding the EUT (A/m)

| Frequency Range | Test       | Test       | Test       | Test       | Limits |
|-----------------|------------|------------|------------|------------|--------|
| (MHz)           | Position A | Position B | Position C | Position D | (A/m)  |
| 0.115-0.205     | 0.08       | 0.11       | 0.14       | 0.13       | 1.63   |

#### H-Filed Strength at 20 cm from the top of the EUT (A/m)

| Frequency Range | Test       | Limits |
|-----------------|------------|--------|
| (MHz)           | Position E | (A/m)  |
| 0.115-0.205     | 0.12       | 1.63   |

#### 8 Test Set-up Photo

Please see annex test setup photos.
