

## **RF exposure**

## FCC ID : 2AWO3-MZFV1701

According to FCC part 1.1310 : The criteria listed in the following table shall be used to evaluate the environment impact of human exposure to radio frequency (RF) radiation as specified in § 1.1307(b)

| Limits for Maximum Pe | rmissible Exposure (MPE) |
|-----------------------|--------------------------|
|-----------------------|--------------------------|

| Frequency range<br>(雌)                                  | Electric field<br>strength(V/m) | Magnetic field<br>strength (A/m) | Power density<br>(ﷺ/ﷺ) | Average time |  |  |  |
|---|---------------------------------|----------------------------------|------------------------|--------------|--|--|--|
| (A) Limits for Occupational / Control Exposures         |                                 |                                  |                        |              |  |  |  |
| 300 – 1 500   |                                 |                                  | f/300                  | 6            |  |  |  |
| 1 500 - 100000  |                                 |                                  | 5                      | 6            |  |  |  |
| (B) Limits for General Population / Uncontrol Exposures |                                 |                                  |                        |              |  |  |  |
| 300 – 1 500   |                                 |                                  | f/1500                 | 6            |  |  |  |
| 1 500 – 100 000   |                                 |                                  | <u>1</u>               | <u>30</u>    |  |  |  |

f= frequency in Mb

Friis transmission formula:  $Pd = (Pout \times G)/(4 \times pi \times R^2)$ 

Where,

Pd = power density in mW/cm<sup>2</sup>

Pout = output power to antenna in mW

G = gain of antenna in linear scale

Pi = 3.1416

R = distance between observation point and center of the radiator in cm

Pd the limit of MPE, 1 mW/cm<sup>2</sup>. If we know the maximum gain of the antenna and the total power input to the antenna, through the calculation, we will know the distance where the MPE limit is reached.

## Results

| Operation mode | Frequency (Mb) | output power<br>(dBm) | Antenna<br>gain (dBi) | Power density<br>at 20 cm(mW/cm²) | Limit<br>(ங⊮/ஊீ) |
|----------------|----------------|-----------------------|-----------------------|-----------------------------------|------------------|
| LE 1 Mbps      | 2 402 ~ 2 480  | -4.37                 | -2.00                 | 0.00005                           | 1                |
