

# TEST REPORT

**Test Report No. : UL-RPT-RP13713258-1316A V2.0**

**Customer** : Robert Bosch GmbH

**Model No. / HMN** : BCM3100

**Contains FCC ID** : 2AWRC-BG95M2

**Contains ISED Certification No.** : IC: 26294- BG95M2

**Technology** : LTE Cat M1 & NB-IoT– Bands 4, 12 & 13

**Test Standard(s)** : FCC Parts 2.1053, 27.53(c)(2), 27.53 (f), 27.53(g), 27.53(h) & 15.209(a)  
Innovation, Science and Economic Development Canada  
RSS-139 Issue 3 Section 6.6  
RSS-130 Issue 2 Section 4.7  
RSS-Gen Issue 5 Section 6.13

**Test Laboratory** : UL International (UK) Ltd, Basingstoke, Hampshire, RG24 8AH, United Kingdom

1. This test report shall not be reproduced except in full, without the written approval of UL International (UK) Ltd.
2. The results in this report apply only to the sample(s) tested.
3. The sample tested is in compliance with the above standard(s).
4. The test results in this report are traceable to the national or international standards.
5. Version 2.0 supersedes all previous versions.

**Date of Issue:** 18 February 2022

**Checked by:**

Sarah Williams  
RF Operations Leader, Radio Laboratory

**Company Signatory:**

Ben Mercer  
Lead Project Engineer, Radio Laboratory

5772

## **1 Attestation of Test Results**

### **1.1 Description of EUT**

The equipment under test was an e-Bike motion sensor attachment used for data communication in the event of a detected theft or accident. The EUT had GPS reception and communication capabilities over LTE Cat-M1 and NB-IoT. The EUT contains FCC / ISED Canada certified module FCC ID: 2AWRC-BG95M2 / IC: 26294-BG95M2.

### **1.2 General Information**

<b>Specification Reference:</b>	47CFR27
<b>Specification Title:</b>	Code of Federal Regulations Volume 47 (Telecommunications): Part 27 Subpart C (Miscellaneous Wireless Communication Services)
<b>Specification Reference:</b>	47CFR15.209
<b>Specification Title:</b>	Code of Federal Regulations Volume 47 (Telecommunications): Part 15 Subpart C (Intentional Radiators) - Section 15.209
<b>Specification Reference:</b>	RSS-Gen Issue 5 February 2021
<b>Specification Title:</b>	General Requirements for Compliance of Radio Apparatus
<b>Specification Reference:</b>	RSS-139 Issue 3 July 2015
<b>Specification Title:</b>	Advanced Wireless Services Equipment Operating in the Bands 1710-1755 MHz and 2110-2180 MHz
<b>Specification Reference:</b>	RSS-130 Issue 2 February 2019

### **1.4 Deviations from the Test Specification**

For the measurements contained within this test report, there were no deviations from, additions to, or exclusions from the test specification identified above.

## **2 Summary of Testing**

### **2.1 Facilities and Accreditation**

The test site and measurement facilities used to collect data are located at Unit 3 Horizon, Wade Road, Kingsland Business Park, Basingstoke, Hampshire, RG24 8AH, United Kingdom. The following table identifies which facilities were utilised for radiated emission measurements documented in this report. Specific facilities are also identified in the test results sections.

Site 17	X

UL International (UK) Ltd is accredited by the United Kingdom Accreditation Service (UKAS). UKAS is one of the signatories to the International Laboratory Accreditation Co-operation (ILAC) Arrangement for the mutual recognition of test reports. The tests reported herein have been performed in accordance with its terms of accreditation.

### **2.2 Methods and Procedures**

<b>Reference:</b>	ANSI/TIA-603-E 2016
<b>Title:</b>	Land Mobile FM or PM Communications Equipment Measurement and Performance Standards
<b>Reference:</b>	ANSI C63.26-2015

<b>Reference:</b>	Notice 2020 - DRS0023
<b>Title:</b>	Guidance on magnetic field strength radiated emission measurements (9 kHz - 30 MHz)

## **2.3 Calibration and Uncertainty**

### **Measuring Instrument Calibration**

In accordance with UKAS requirements all the measurement equipment is on a calibration schedule. All equipment was within the calibration period on the date of testing.

### **Measurement Uncertainty & Decision Rule**

#### **Overview**

No measurement or test can ever be perfect and the imperfections give rise to error of measurement in the results. Consequently the result of a measurement is only an approximation to the value of the measurand (the specific quantity subject to measurement) and is only complete when accompanied by a statement of the uncertainty of the approximation.

The expression of uncertainty of a measurement result allows realistic comparison of results with reference values and limits given in specifications and standards.

#### **Decision Rule**

The decision rule applied is based upon the accuracy method criteria. The measurement uncertainty is met and the result is considered in conformance with the requirement criteria if the observed value is within the prescribed limit.

#### **Measurement Uncertainty**

The reported expanded uncertainties below are based on a standard uncertainty multiplied by an appropriate coverage factor such that a confidence level of approximately 95% is maintained. For the purposes of this document “approximately” is interpreted as meaning “effectively” or “for most practical purposes”.

Measurement Type	Range	Confidence Level (%)	Calculated Uncertainty
Radiated Spurious Emissions	9 kHz to 30 MHz	95%	±5.32 dB
Radiated Spurious Emissions	30 MHz to 1 GHz	95%	±3.30 dB
Radiated Spurious Emissions	1 GHz to 18 GHz	95%	±2.94 dB

The methods used to calculate the above uncertainties are in line with those recommended within the various measurement specifications. Where measurement specifications do not include guidelines for the evaluation of measurement uncertainty the published guidance of the appropriate accreditation body is followed.

## 2.4 Test and Measurement Equipment

	Middle	23230	782.0
	Top	23278	786.8

### **3.4 Description of Available Antennas**

The radio utilizes an integrated antenna, with the following maximum gains:

Frequency Range (MHz)	Antenna Gain (dBi)
699 to 716	-4.4
777 to 787	-3.9
1710 to 1755	0.6

### **3.5 Description of Test Setup**

#### **Support Equipment**

The following support equipment was used to exercise the EUT during testing:

<b>Description:</b>	Laptop Computer
<b>Brand Name:</b>	Dynabook
<b>Model Name or Number:</b>	Satellite Pro C40-H-10D
<b>Serial Number:</b>	31227951H

<b>Description:</b>	Radio Communication Analyser
<b>Brand Name:</b>	Anritsu
<b>Model Name or Number:</b>	MT8821C
<b>Serial Number:</b>	6262287694

<b>Description:</b>	DC Power Supply
<b>Brand Name:</b>	Tenma
<b>Model Name or Number:</b>	72-10480
<b>Serial Number:</b>	08250099280

<b>Description:</b>	CAN opto converter 1
<b>Brand Name:</b>	Peak System
<b>Model Name or Number:</b>	IPEH-002026
<b>Serial Number:</b>	01254#2

<b>Description:</b>	CAN opto converter 2
<b>Brand Name:</b>	Peak System
<b>Model Name or Number:</b>	IPEH-002026
<b>Serial Number:</b>	01256#1

**Support Equipment (continued)**

<b>Description:</b>	AC to DC Power Adapter 1
<b>Brand Name:</b>	Mascot
<b>Model Name or Number:</b>	9581
<b>Serial Number:</b>	3319R2

<b>Description:</b>	AC to DC Power Adapter 2
<b>Brand Name:</b>	BSY
<b>Model Name or Number:</b>	BSY065T1902103 D
<b>Serial Number:</b>	G71C000MG410 /2012043370

<b>Description:</b>	CAN-FD to USB Dongle 1
<b>Brand Name:</b>	Peak System
<b>Model Name or Number:</b>	IPEH-004022
<b>Serial Number:</b>	025569

<b>Description:</b>	CAN-FD to USB Dongle 2
<b>Brand Name:</b>	Peak System
<b>Model Name or Number:</b>	IPEH-004022
<b>Serial Number:</b>	025564

<b>Description:</b>	BRC Simulator
<b>Brand Name:</b>	Not marked or stated
<b>Model Name or Number:</b>	Not marked or stated
<b>Serial Number:</b>	Not marked or stated

<b>Description:</b>	Fibre Optics Cable. Quantity 1. Length 10 m.
<b>Brand Name:</b>	Not marked or stated
<b>Model Name or Number:</b>	Not marked or stated
<b>Serial Number:</b>	Not marked or stated

<b>Description:</b>	HMI Cables. Quantity 2. Lengths 0.3 m & 1.5 m.
<b>Brand Name:</b>	Not marked or stated
<b>Model Name or Number:</b>	Not marked or stated
<b>Serial Number:</b>	Not marked or stated

## **Operating Modes**

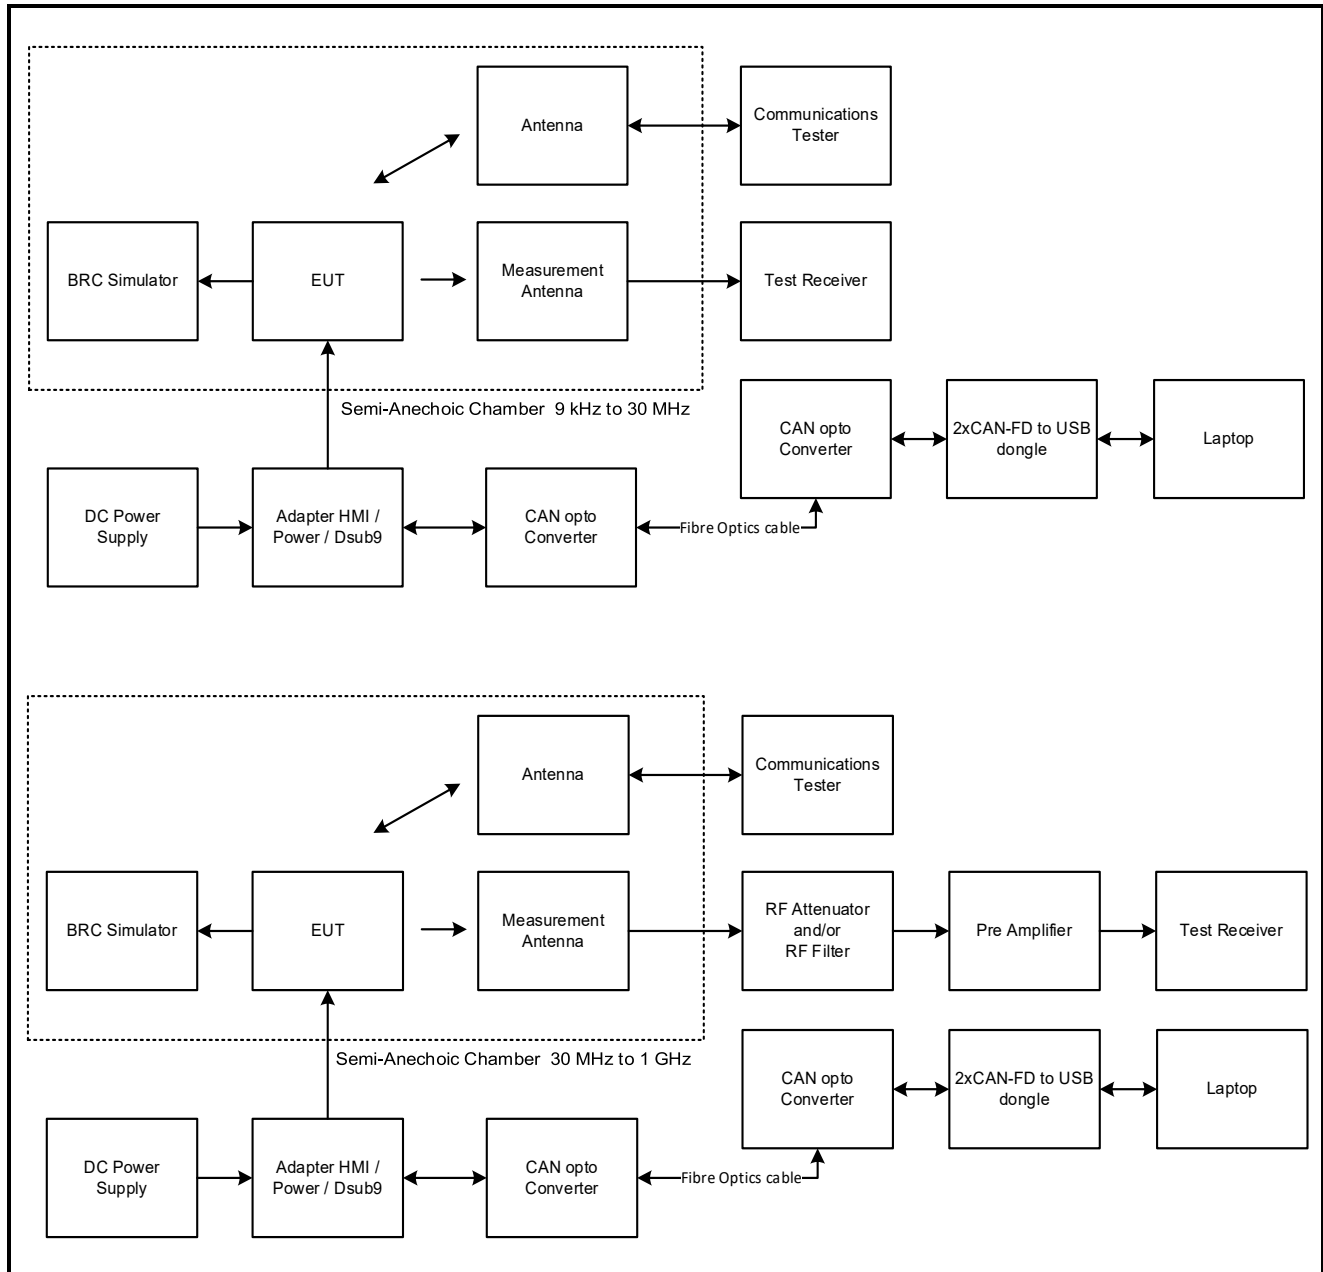

The EUT was tested in the following operating mode(s):

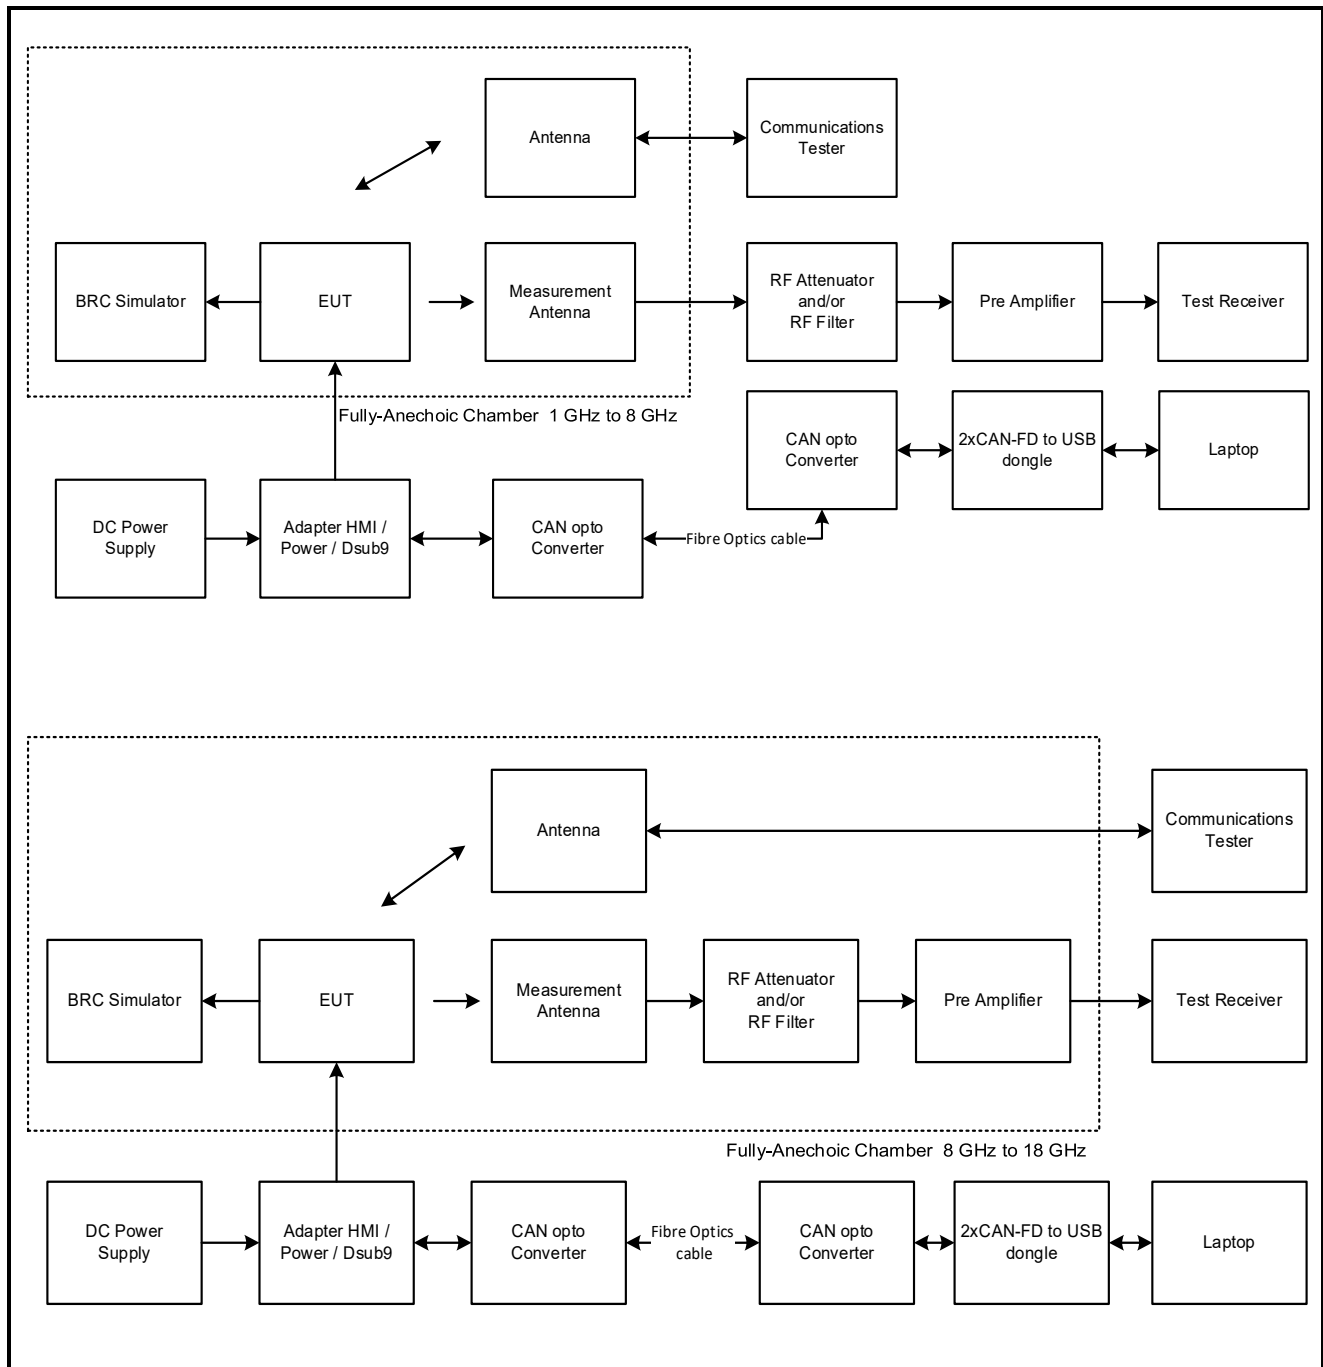

- Transmitting at maximum power on bottom, middle or top channel as required.
- Worst-case modes were determined and tested as:
  - Band 4 -:NB-IoT:  $\pi/2$ -BPSK / 1 tone / 3.75 kHz / Offset 0.
  - Band 4 -:LTE Cat M1: QPSK / NB 0 / 1 RB / Offset 0.
  - Band 12 -:NB-IoT:  $\pi/2$ -BPSK / 1 tone / 15 kHz / Offset 11.
  - Band 12 -: LTE Cat M1: QPSK / NB 0 / 1 RB / Offset 0.
  - Band 13 -:NB-IoT:  $\pi/2$ -BPSK / 1 tone / 15 kHz / Offset 0.
  - Band 13 -: LTE Cat M1: QPSK / NB 0 / 1 RB / Offset 0.

## **Configuration and Peripherals**

The EUT was tested in the following configuration(s):

- The EUT was placed into a non-ui mode by using the BCM PC Tool for Certification application installed on a customer supplied laptop PC. Instructions were provided by the customer to enable the baseband and radio (BCM3100 Certification Instructions\_20210709.docx). This enabled the EUT to connect via a radiated link with the Anritsu LTE system simulator operating in transceiver mode. The Anritsu LTE simulator was used to configure the EUT operating mode.
- The EUT was placed in three orthogonal orientations X, Y and Z to determine the worst-case orientation for radiated spurious emissions. This was determined to be the X position for Band 4 and the Y position for Bands 12 & 13. All pre-scans and final measurements were performed in this orientation.
- The EUT was powered from a DC Power Supply.

**Test Setup Diagrams****Radiated Tests:****Test Setup for Transmitter Radiated Emissions**

**Test Setup Diagrams (continued)****Test Setup for Transmitter Radiated Emissions (continued)**

## **4 Radiated Test Results**

### **4.1 Transmitter Out of Band Radiated Emissions – NB-IoT / Band 4**

#### **Test Summary:**

<b>Test Engineers:</b>	John Ferdinand & Jose Bayona	<b>Test Dates:</b>	01 September 2021 to 01 October 2021
<b>Test Sample Serial Numbers:</b>	14026-0022-01-368-00-000 & 14026-0033-01-368-00-000		

<b>FCC Reference:</b>	Parts 2.1053, 15.209(a) & 27.53(h)(1)
<b>ISED Canada Reference:</b>	RSS-Gen 6.13 / RSS-139 6.6
<b>Test Method Used:</b>	KDB 971168 Section 6 referencing ANSI C63.26 Section 5.7
<b>Frequency Range</b>	9 kHz to 18 GHz

#### **Environmental Conditions:**

<b>Temperature (°C):</b>	23 to 24
<b>Relative Humidity (%):</b>	45 to 49

#### **Note(s):**

1. The emission seen on the 1 GHz to 3 GHz plot at approximately 1732.5 MHz is the EUT carrier.
2. All other emissions shown on the pre-scans were investigated and found to be ambient, or > 20 dB below the appropriate limit or below the noise floor of the measurement system.
3. FCC: Measurements below 30 MHz were performed in a semi-anechoic chamber (Asset Number K0001) at 3 metres. The EUT was placed at a height of 80 cm above the reference ground plane in the centre of the chamber turntable. The limit was extrapolated to 3 metres in accordance ANSI C63.10 clause 6.4.3; measurements may be performed at a closer distance and the measured level extrapolated to the specified measurement distance using the method described in clause 6.4.4.2.
4. ISED: Measurements below 30 MHz were performed in a semi-anechoic chamber (Asset Number K0001) at 3 metres. The EUT was placed at a height of 80 cm above the reference ground plane in the centre of the chamber turntable. The limit was extrapolated to 3 metres, as allowed by ANSI C63.10 clause 5.2; an alternative test site that can demonstrate equivalence to an open area test site may be used for measurements below 30 MHz. Therefore, measurements were performed in a semi-anechoic chamber. The correlation data between semi-anechoic chamber and an open field test site is available upon request.
5. Measurements from 30 MHz to 1 GHz were performed in a semi-anechoic chamber (Asset Number K0001) at a distance of 3 metres. The EUT was placed at a height of 80 cm above the reference ground plane in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 metre to 4 metres.
6. Pre-scans above 1 GHz were performed in a fully-anechoic chamber (Asset Number K0017) at a distance of 3 metres. The EUT was placed at a height of 1.5 metres above the test chamber floor in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 metre to 4 metres.

**Transmitter Out of Band Radiated Emissions – NB-IoT / Band 4 (continued)****Results: Middle Channel**

Frequency (MHz)	Peak Level (dBm)	Limit (dBm)	Margin (dB)	Result
1883.000	-41.8	-13.0	28.8	Complied
3465.000	-49.8	-13.0	36.8	Complied

Transmitter Out of Band Radiated Emissions – NB-IoT / Band 4 (continued)

## 4.2 Transmitter Out of Band Radiated Emissions – LTE Cat M1 / Band 4

### Test Summary:

<b>Test Engineers:</b>	John Ferdinand & Jose Bayona	<b>Test Dates:</b>	01 September 2021 to 01 October 2021

3. FCC: Measurements below 30 MHz were performed in a semi-anechoic chamber (Asset Number K0001) at 3 metres. The EUT was placed at a height of 80 cm above the reference ground plane in the centre of the chamber turntable. The limit was extrapolated to 3 metres in accordance ANSI C63.10 clause 6.4.3; measurements may be performed at a closer distance and the measured level extrapolated to the specified measurement distance using the method described in clause 6.4.4.2.
4. ISED: Measurements below 30 MHz were performed in a semi-anechoic chamber (Asset Number K0001) at 3 metres. The EUT was placed at a height of 80 cm above the reference ground plane in the centre of the chamber turntable. The limit was extrapolated to 3 metres, as allowed by ANSI C63.10 clause 5.2; an alternative test site that can demonstrate equivalence to an open area test site may be used for measurements below 30 MHz. Therefore, measurements were performed in a semi-anechoic chamber. The correlation data between semi-anechoic chamber and an open field test site is available upon request.
5. Measurements from 30 MHz to 1 GHz were performed in a semi-anechoic chamber (Asset Number K0001) at a distance of 3 metres. The EUT was placed at a height of 80 cm above the reference ground plane in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 metre to 4 metres.
6. Pre-scans above 1 GHz were performed in a fully-anechoic chamber (Asset Number K0017) at a distance of 3 metres. The EUT was placed at a height of 1.5 metres above the test chamber floor in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 metre to 4 metres.

**Transmitter Out of Band Radiated Emissions – LTE Cat M1 / Band 4 (continued)****Results: Middle Channel**

Frequency (MHz)	Peak Level (dBm)	Limit (dBm)	Margin (dB)	Result
1881.000	-41.8	-13.0	28.8	Complied
3460.500	-47.1	-13.0	34.1	Complied

**Transmitter Out of Band Radiated Emissions – LTE Cat M1 / Band 4 (continued)**

#### **4.3 Transmitter Out of Band Radiated Emissions – NB-IoT / Band 12**

##### **Test Summary:**

<b>Test Engineers:</b>	John Ferdinand & Jose Bayona	<b>Test Dates:</b>	01 September 2021 & 01 October 2021
<b>Test Sample Serial Numbers:</b>	14026-0022-01-368-00-000 & 14026-0033-01-368-00-000		

<b>FCC Reference:</b>	Parts 2.1053 & 27.53(g)
<b>ISED Canada Reference:</b>	RSS-Gen 6.13 / RSS-130 4.7
<b>Test Method Used:</b>	KDB 971168 Section 6 referencing ANSI C63.26 Section 5.7
<b>Frequency Range</b>	9 kHz to 8 GHz

##### **Environmental Conditions:**

<b>Temperature (°C):</b>	23 to 24
<b>Relative Humidity (%):</b>	45 to 49

##### **Note(s):**

1. The emission seen on the 30 MHz to 1 GHz plot at approximately 707.5 MHz is the EUT carrier.
2. All other emissions shown on the pre-scans were investigated and found to be ambient, or > 20 dB below the appropriate limit or below the noise floor of the measurement system.
3. FCC: Measurements below 30 MHz were performed in a semi-anechoic chamber (Asset Number K0001) at 3 metres. The EUT was placed at a height of 80 cm above the reference ground plane in the centre of the chamber turntable. The limit was extrapolated to 3 metres in accordance ANSI C63.10 clause 6.4.3; measurements may be performed at a closer distance and the measured level extrapolated to the specified measurement distance using the method described in clause 6.4.4.2.
4. ISED: Measurements below 30 MHz were performed in a semi-anechoic chamber (Asset Number K0001) at 3 metres. The EUT was placed at a height of 80 cm above the reference ground plane in the centre of the chamber turntable. The limit was extrapolated to 3 metres, as allowed by ANSI C63.10 clause 5.2; an alternative test site that can demonstrate equivalence to an open area test site may be used for measurements below 30 MHz. Therefore, measurements were performed in a semi-anechoic chamber. The correlation data between semi-anechoic chamber and an open field test site is available upon request.
5. Measurements from 30 MHz to 1 GHz were performed in a semi-anechoic chamber (Asset Number K0017) at a distance of 3 metres. The EUT was placed at a height of 80 cm above the reference ground plane in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 metre to 4 metres.
6. Pre-scans above 1 GHz were performed in a fully-anechoic chamber (Asset Number K0017) at a distance of 3 metres. The EUT was placed at a height of 1.5 metres above the test chamber floor in the centre of the chamber turntable. Maximum emission levels were determined by height searching the measurement antenna over the range 1 metre to 4 metres.

**Transmitter Out of Band Radiated Emissions – NB-IoT / Band 12 (continued)****Results: Middle Channel**

Frequency (MHz)	Peak Level (dBm)	Limit (dBm)	Margin (dB)	Result
1415.000	-55.6	-13.0	42.6	Complied
2122.500	-51.4	-13.0	38.4	Complied
2470.256	-56.6	-13.0	43.6	Complied

#### **4.4 Transmitter Out of Band Radiated Emissions – LTE Cat M1 / Band 12**
