Operation

Starting Operation

Place your smartphone in the SmartphoneGrip.

Start the **eBike Flow** app to have riding data displayed.

Depending on the smartphone's operating system, the **eBike Flow** app can be downloaded free of charge from the Apple App Store and the Google Play store.

Use your smartphone to scan the code in order to download the **eBike Flow** app.

Charging your Smartphone

While the smartphone is in the SmartphoneGrip, it can be charged at the same time as displaying riding data. If your smartphone has an inductive charging function, you can charge the smartphone without needing a cable.

The charging voltage is switched off when you remove the smartphone from the holder.

Charging via USB

If your smartphone does not have an inductive charging function, you can charge your smartphone via the USB port (3). To do so, open the USB cap and connect a separate USB cable (not included in the scope of delivery) to the Micro-AB USB port.

Pay attention to the type of plug required for your smartphone when purchasing the USB cable.

The following alarm states are detected and will lead to the inductive charging process being interrupted:

- Detection of foreign objects, e.g. coins, keys or other metallic objects
- Temperature alarm
The charging process will switch off at temperatures above 78 °C. The charging process is continued once the temperature drops below 56 °C.
- Overvoltage alarm at voltages above 6 V
- Undervoltage alarm at voltages below 4.2 V
