| 15.203                              | Antenna Requirement           | Pass |  |  |  |

NOTE:

(1) "N/A" denotes test is not applicable in this Test Report.

#### **1.1 TEST FACILITY**

All measurement facilities used to collect the measurement data are located at 1/F, Building E, Fenda Science Park, Sanwei Community, Xixiang Street, Bao'an District, Shenzhen 518126 P.R. China.

The sites are constructed in conformance with the requirements of ANSI C63.7, ANSI C63.10 and CISPR Publication 22.

Site Description

| CNAS-Lab.       | The Certificate Registration Number is L5516.   |
|-----------------|---|
| IC-Registration | The Certificate Registration Number is 9270A.   |
|                 | CAB identifier:CN0074   |
| FCC- Accredited | Test Firm Registration Number: 463705.  |
|                 | Designation Number: CN1184  |

#### 2.2 DESCRIPTION OF TEST MODES

To investigate the maximum EMI emission characteristics generates from EUT, the test system was pre-scanning tested base on the consideration of following EUT operation mode or test configuration mode which possible have effect on EMI emission level. Each of these EUT operation mode(s) or test configuration mode(s) mentioned above was evaluated respectively.

| Pretest Mode | Description |
|--------------|-------------|
| Mode 1       | TX-13.56MHz |

| For Radiated Emission       |                    |  |  |  |  |
|-----------------------------|--------------------|--|--|--|--|
| Final Test Mode Description |                    |  |  |  |  |
| Mode 1                      | Mode 1 TX-13.56MHz |  |  |  |  |

| 2.3 BLOCK DIGRAM SHOWING THE CONFIGURATION OF SYSTEM TESTED  |                           |  |  |  |  |
|--|---------------------------|--|--|--|--|
| For Radiated Test Cases  |                           |  |  |  |  |
|  |                           |  |  |  |  |
| EUT  |                           |  |  |  |  |
|  |                           |  |  |  |  |
|  |                           |  |  |  |  |
|  |                           |  |  |  |  |
| For Conducted Test Cases   |                           |  |  |  |  |
|  |                           |  |  |  |  |
| C-1  |                           |  |  |  |  |
| Instrument   |                           |  |  |  |  |
|  |                           |  |  |  |  |
| Note:1.The temporary antenna connector is soldered on the PCB board in order to pe   | utorm conducted tests and |  |  |  |  |
| this temporary antenna connector is listed in the equipment list.<br>2.EUT built-in battery-powered, the battery is fully-charged. |                           |  |  |  |  |
|  |                           |  |  |  |  |
|  |                           |  |  |  |  |
|  |                           |  |  |  |  |
|  |                           |  |  |  |  |
|  |                           |  |  |  |  |

|  |                           |  |  |  |  |
|  |                           |  |  |  |  |
|  |                           |  |  |  |  |
|  |                           |  |  |  |  |
|  |                           |  |  |  |  |
|  |                           |  |  |  |  |
|  |                           |  |  |  |  |

#### 2.4 DESCRIPTION OF SUPPORT UNITS (CONDUCTED MODE)

NTEK北测

The EUT has been tested as an independent unit together with other necessary accessories or support units. The following support units or accessories were used to form a representative test configuration during the tests.

| Item | Equipment | Model/Type No. | Series No. | Note |
|------|-----------|----------------|------------|------|
|      |           |                |            |      |
|      |           |                |            |      |
|      |           |                |            |      |
|      |           |                |            |      |
|      |           |                |            |      |
|      |           |                |            |      |
|      |           |                |            |      |
|      |           |                |            |      |
|      |           |                |            |      |
|      |           |                |            |      |

| Item | Cable Type | Shielded Type | Ferrite Core | Length | Note |
|------|------------|---------------|--------------|--------|------|
| C-1  | RF Cable   | YES           | NO           | 0.1m   |      |
|      |            |               |              |        |      |
|      |            |               |              |        |      |
|      |            |               |              |        |      |

Note:

- (1) The support equipment was authorized by Declaration of Confirmation.
- (2) For detachable type I/O cable should be specified the length in cm in <sup>[]</sup> Length <sup>[]</sup> column.

Note:

1.We will use the temporary antenna connector (soldered on the PCB board) When conducted test And this temporary antenna connector is listed within the instrument list

2. Each piece of equipment is scheduled for calibration once a year except the Test Cable& Aux Equipment which is scheduled for calibration every 3 years.

### **3. ANTENNA REQUIREMENT**

#### 3.1 STANDARD REQUIREMENT

15.203 requirement: For intentional device, according to 15.203: an intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device.

#### 3.2 EUT ANTENNA

The EUT antenna is permanent attached antenna. It comply with the standard requirement.

#### 4. EMC EMISSION TEST

NTEK北测

#### 4.1 CONDUCTED EMISSION MEASUREMENT

#### 4.1.1 POWER LINE CONDUCTED EMISSION Limits (Frequency Range 150KHz-30MHz)

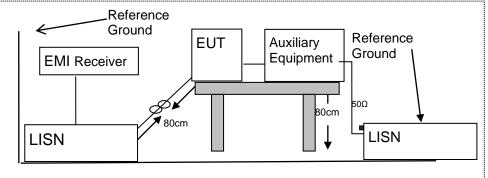

|                | Conducted  | d Emission Limit |
|----------------|------------|------------------|
| Frequency(MHz) | Quasi-peak | Average          |
| 0.15-0.5       | 66-56*     | 56-46*           |
| 0.5-5.0        | 56         | 46               |
| 5.0-30.0       | 60         | 50               |

Note: 1. \*Decreases with the logarithm of the frequency

2. The lower limit shall apply at the transition frequencies

3. The limit decreases in line with the logarithm of the frequency in the range of 0.15 to 0.50MHz.

#### **4.1.2 TEST CONFIGURATION**

#### 4.1.3 TEST PROCEDURE

According to the requirements in Section 13.1.4.1 of ANSI C63.10-2013 Conducted emissions the EUT measured in the frequency range between 0.15 MHz and 30 MHz using CISPR Quasi-Peak and average detector mode.

- 1. The EUT was placed 0.4 meter from the conducting wall of the shielding room.
- 2. The EUT was placed on a table which is 0.8m above ground plane.
- Connect EUT to the power mains through a line impedance stabilization network (LISN). All other support equipments powered from additional LISN(s). The LISN provide 50 Ohm/ 50uH of coupling impedance for the measuring instrument.
- 4. Interconnecting cables that hang closer than 40 cm to the ground plane shall be folded back and forth in the center forming a bundle 30 to 40cm long.
- I/O cables that are not connected to a peripheral shall be bundled in the center. The end of the cable may be terminated, if required, using the correct terminating impedance. The overall length shall not exceed 1 m.
- 6. LISN at least 80 cm from nearest part of EUT chassis.
- 7. The frequency range from 150KHz to 30MHz was searched.
- 8. Set the test-receiver system to Peak Detect Function and specified bandwidth(IF bandwidth=9KHz) with Maximum Hold Mode
- 9. For the actual test configuration, please refer to the related Item -EUT Test Photos.

| 13.36-13.41       |                     |               |             |

LIMITS OF RADIATED EMISSION MEASUREMENT (FCC 15.225)

(a)The field strength of any emissions within the band 13.553-13.567 MHz shall not exceed 15,848 microvolts/meter at 30 meters, equal to 124dBuV/m at 3 meters.

(b) Within the bands 13.410-13.553 MHz and 13.567-13.710 MHz, the field strength of any emissions shall not exceed 334 microvolts/meter at 30 meters, equal to 90.5dBuV/m at 3 meters.
(c) Within the bands 13.110-13.410 MHz and 13.710-14.010 MHz the field strength of any emissions shall not exceed 106 microvolts/meter at 30 meters, equal to 80.5dBuV/m at 3 meters..
(d) The field strength of any emissions appearing outside of the 13.110-14.010 MHz band shall not exceed the general radiated emission limits in § 15.209.

| Spectrum Parameter                    | Setting               |
|---------------------------------------|-----------------------|
| Attenuation                           | Auto                  |
| Start Frequency                       | 1000 MHz              |
| Stop Frequency                        | 10th carrier harmonic |
| RB / VB (emission in restricted band) | 1MHz / 1MHz for Peak  |

| Receiver Parameter     | Setting                          |
|------------------------|----------------------------------|
| Attenuation            | Auto                             |
| Start ~ Stop Frequency | 9kHz~150kHz / RB 200Hz for QP    |
| Start ~ Stop Frequency | 150kHz~30MHz / RB 9kHz for QP    |
| Start ~ Stop Frequency | 30MHz~1000MHz / RB 120kHz for QP |

#### 4.2.2 TEST PROCEDURE

NTEK北测

- a. The measuring distance of at 3 m shall be used for measurements at frequency up to 1GHz And above 1GHz,
- b. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3m meter. The table was rotated 360 degrees to determine the position of the highest radiation.
- c. The height of the equipment or of the substitution antenna shall be 0.8 m; the height of the test antenna shall vary between 1 m to 4 m.
- d. The initial step in collecting conducted emission data is a spectrum analyzer peak detector mode pre-scanning the measurement frequency range. Significant peaks are then marked and then Quasi Peak detector mode re-measured.
- e. If the Peak Mode measured value compliance with and lower than Quasi Peak Mode Limit, the EUT shall be deemed to meet QP Limits and then no additional QP Mode measurement performed.
- f. For the actual test configuration, please refer to the related Item –EUT Test Photos. Note:

Both horizontal and vertical antenna polarities were tested

and performed pretest to three orthogonal axis. The worst case emissions were reported

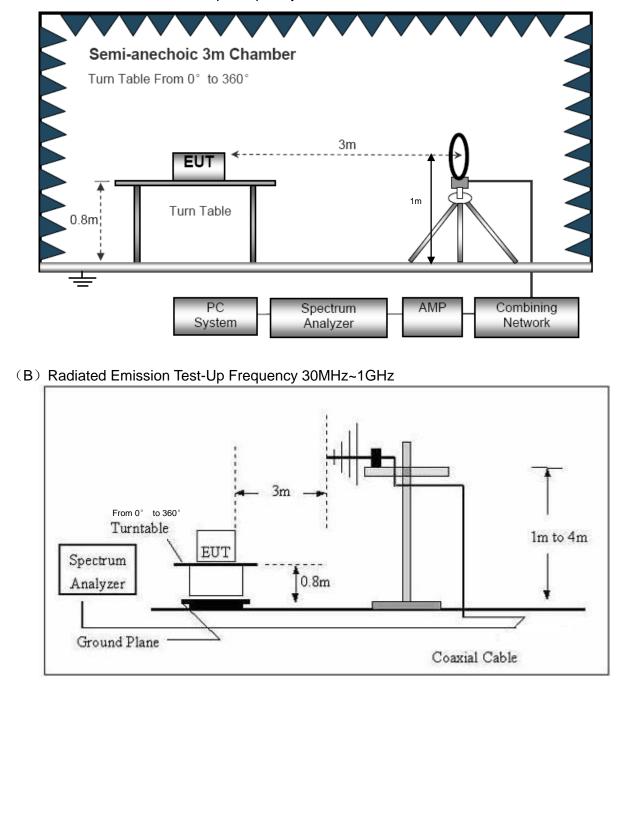

#### 4.2.3 DEVIATION FROM TEST STANDARD

No deviation

#### 4.2.4 TEST SETUP

(A) Radiated Emission Test-Up Frequency Below 30MHz

# ACCREDITED Certificate #4298.01

Note:

Below 30MHz, Pre-test the X, Y, Z axis to find X axis is worst case, so only record X axis test data. X: Field strength which this device generates since the position of the charging coil and loop antenna differ by 0 degrees.

Y: Field strength which this device generates since the position of the charging coil and loop antenna differ by 90 degrees.

Z: Field strength which this device generates since the position of the charging coil and loop antenna differ by 180 degrees

Remark:

Factor = Antenna Factor + Cable Loss.

## 5. BANDWIDTH TEST

#### 5.1 TEST PROCEDURE

The EUT was directly connected to the spectrum analyzer and antenna output port as show in the block diagram below.

Spectrum setting: The resolution bandwidth (RBW) shall be in the range of 1% to 5% of the actual occupied / x dB bandwidth and the video bandwidth (VBW) shall not be smaller than three times the RBW value.

#### 5.2 DEVIATION FROM STANDARD

#### 15.215

(c) Intentional radiators operating under the alternative provisions to the general emission limits, as contained in §§15.217 through 15.257 and in subpart E of this part, must be designed to ensure that the 20 dB bandwidth of the emission, or whatever bandwidth may otherwise be specified in the specific rule section under which the equipment operates, is contained within the frequency band designated in the rule section under which the equipment is operated

FCC Part15.225 Operation within the band 13.110 - 14.010MHz

#### 5.3 TEST SETUP

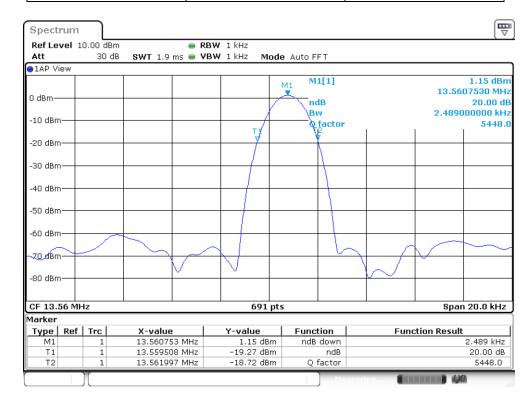

#### 5.4 TEST RESULTS

# 6. FREQUENCY TOLERANCE

| 6.1 Requirement:<br>Test<br>Requirement: | FCC Part15.225  |
|--|---|
| Test Method:                             | ANSI C63.10   |
| Requirement:                             | The frequency tolerance of the carrier signal shall be maintained |
|  | within +/- 0.01% of the operating frequency over a temperature    |
|  | variation of –20 degrees to +50 degrees C at normal supply        |
|  | voltage, and for a variation in the primary supply voltage from   |
|  | 85% to 115% of the rated supply voltage at a temperature of 20    |
|  | degrees C. For battery operated equipment, the equipment tests    |
|  | shall be performed using a new battery.                           |
| 6.2 Test Procedure                       | 9   |

#### 1. The EUT was placed on a turn table which is 0.8m above ground plane.

2.Set EUT as normal operation

3.Set SPA Center Frequency = fundamental frequency, RBW, VBW= 10kHz, Span =100kHz.

4.Set SPA Max hold. Mark peak.
