Measurement data:

Remark:

Pre-scan all kind of the place mode (X-axis, Y-axis, Z-axis), and found the Y-axis which it is worse case.

9kHz~30MHz

The low frequency, which started from 9 kHz to 30MHz, was pre-scanned and the result which was 20dB lower than the limit line was not reported.

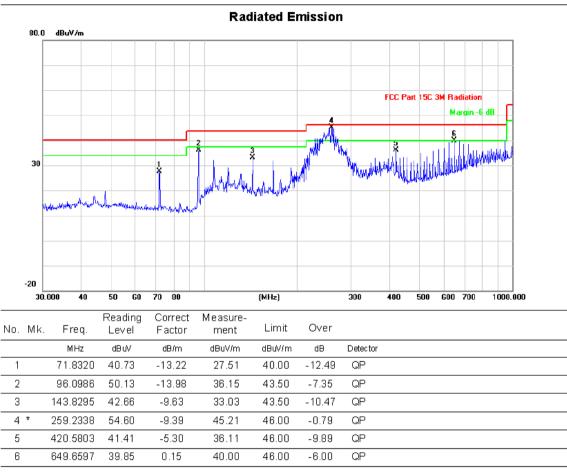

There is a comparison data of both open-field test site and semi-Anechoic chamber, and the result came out very similar.

Below 1GHz

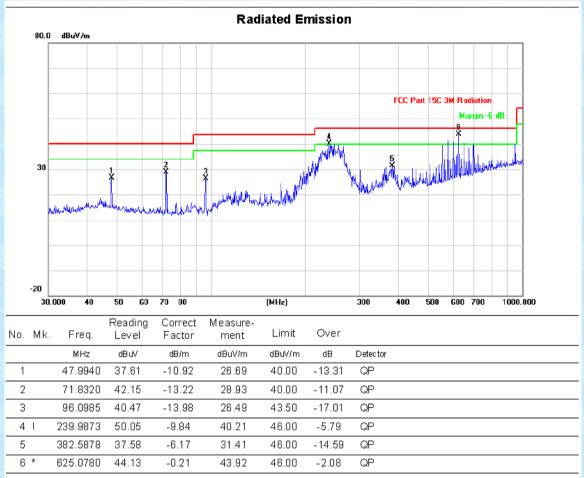

We only recorded the data of the worst mode. Please see the following:
