Federal Communications Commission  
7435 Oakland Mills Road  
Columbia, MD 21046

To whom it may concern:

Tonal Systems Inc. hereby requests a Permissive Change Class II of the radio equipment certification for the Tonal 2 certification number, FCC ID: 2AXL7-0007. This product differs from the originally approved product in the following manner:

- (a) Associated digital circuitry. – No Changes have been done to the RF digital circuitry.
- (b) Functional capabilities. – Only one change is made to functional capabilities. Through field firmware update, we enable MIMO which wasn't tested in original application due to limited time. Current product only uses Channel 0 for WIFI. After PCII certification we will release firmware update to enable WIFI MIMO mode.
- (c) Antenna Characteristics. – No Changes have been made to the Antenna Characteristics.
- (d) Cosmetic differences – No Changes have been made to the Cosmetics.

I do attest that the Field strength and/or RF Output readings remained the same or are lower than the originally approved product and that they did not increase therefore qualifying this product for this application type.

Sincerely,

---

Jason Goulden  
VP Hardware  
Tonal Systems Inc.
