2. Differences between old and new prototypes:
 - a. The laser position is different, that is, the appearance of the objective lens and the middle shell are different. The old prototype is the laser on the objective lens, while the new prototype is the laser on the middle shell;
 - b. The laser materials are different. After switching manufacturers, the wavelength of the laser remains unchanged and the overall power consumption remains the same. However, there are changes in the structure and hardware of the laser module;
 - c. The new prototype of the button board has removed a socket
 - d. The new prototype of the power board has added a socket
 - e. All MIC positions are adjusted to the objective lens

Note: The definition of identical should be “**electrically identical**”. A device will be considered to be electrically identical if no changes are made to the devices’ schematics, board layouts, component layouts, chip sets, resistors and all other electrical aspects of the device are identical.
