| Test items                          | Basics standards           | Result |
|-------------------------------------|----------------------------|--------|
| Antenna requirement                 | FCC part 15.203/15.247 (c) | Pass   |
| AC Power Line Conducted<br>Emission | FCC part 15.207            | Pass   |
| Conducted Peak Output Power         | FCC part 15.247 (b)(3)     | Pass   |
| Channel Bandwidth & 99% OCB         | FCC part 15.247 (a)(2)     | Pass   |
| Power Spectral Density              | FCC part 15.247 (e)        | Pass   |
| Band Edge                           | FCC part 15.247(d)         | Pass   |
| Spurious Emission                   | FCC part 15.205/15.209     | Pass   |

Notes:

1: NA =Not Applicable

2: Determining compliance based on the results of the compliance measurement, not taking into account measurement uncertainty. If necessary, the applicant shall informing test lab in advance 3: Additions, Deviations and Exclusions from Standards: None.

## 4 Measurement Uncertainty

Where relevant, the following measurement uncertainty levels have been estimated for tests performed on the EUT as specified in CISPR 16-4-2:

The measurement uncertainty represents an expanded uncertainty expressed at approximately the 95% confidence level using a coverage factor of k=2.

| Item                              | Uncertainty (±) (k=2, 95%) |      |  |
|-----------------------------------|----------------------------|------|--|
| Output Power, Conducted           | 0.54                       |      |  |
| Power Spectral Density, Conducted | 1.2                        | 28   |  |
| Spurious Emissions, Conducted     | 1.2                        | 28   |  |
| Redicted Emissions( (10Hz)        | 9KHz~30MHz                 | 2.6  |  |
| Radiated Emissions(<1GHz)         | 30MHz~1GHz                 | 5.08 |  |
|                                   | 1GHz~6GHz                  | 4.02 |  |
| Radiated Emissions(>1GHz)         | 6GHz~18GHz                 | 4.62 |  |
|                                   | 18GHz~40GHz                | 4.7  |  |
| Occupied Bandwidth                | 1.14                       |      |  |
| Conducted Emissions AC mains      | 9kHz~150KHz                | 1.76 |  |
| Conducted Emissions—AC mains      | 150kHz~30MHz 2.52          |      |  |
| Conducted Emissions—Telecom       | 2.64                       |      |  |

| Power level setup | Default        |

## 5.7 Antenna Information

| Ant | Manufacturer | Model | Antenna<br>Type | Antenna Gain<br>(dBi) |
|-----|--------------|-------|-----------------|-----------------------|
| 1   | 1            | 1     | PCB             | 1.7                   |

All above information provided by the applicant which is fully responsible for those information.

## 5.8 Others

The laboratory responsible for all the information provided in the report, except those information provided by the applicant.

The applicant shall fully responsible for the information they provided.

The report would be invalid without a stamp of test laboratory and the signatures of compiler and approver. The laboratory has not been responsible for the sampling stage; the test report merely corresponds to the test sample received.

Any objection to the test report shall submitted to the test laboratory within 15 days from the date of receipt of the report.

It is not permitted to copy extracts of these test result without the written permission of the test laboratory.

# 6 Technical Requirement and Measurement Data

## 6.1 Generally requirement

#### 15.203 requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this section. The manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

#### 15.247(c) (1)(i) requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator shall be considered sufficient to comply with the provisions of this section. The manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

## 6.6 Conducted Emission

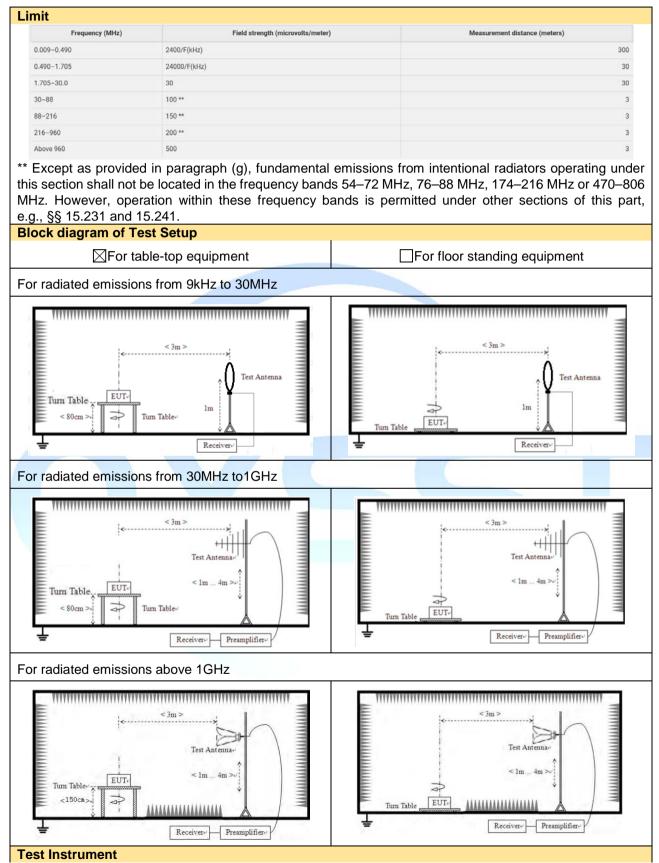

#### Limit

In any 100 kHz bandwidth outside the frequency band in which the spread spectrum intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement.

## 6.7 Radiated Spurious Emission

GuangDong Set Sail Testing Co., Ltd.

101, No.19, Tianxin Hudie 1st Road, Huangjiang Town, Dongguan, Guangdong, China Tel: (86)-0769-26622875 Email: sst@sstesting.cn

Report No.: SST240428007EF01

I

Refer to Annex A for details

| Test Procedures  |  |
|--|--|
| Test applies to KDB558074 D01 15.247 Meas Guidance v05r02 & C63.10 |  |
| Verdict  |  |
| Pass   |  |

Note1: The emission from 9 kHz to 30MHz was pre-tested and found the result was 20dB lower than the limit, and according to 15.31(o), the test result no need to reported.

Note2: For those undesirable emission (in the Restricted Bands and out-of-band spurious) above 1GHz, According to KDB 558074 and ANSI C63.10 subclause 11, as an alternative, antenna-port conducted measurements in conjunction with cabinet emissions tests will be permitted to demonstrate compliance.

| *Decreases with the legentithm of the | fraguanay  | •         |

\*Decreases with the logarithm of the frequency.

If the limit for the measurement with the average detector is met when using a receiver with a quasi-peak detector, the equipment under test shall be deemed to meet both limits and the measurement using the receiver with an average detector need not be carried out

## Test Procedures

The measurement was performed in a shield room.

Measured levels of ac power-line conducted emission shall be the radio-noise voltage from the voltage probe, where permitted, or across the 50  $\Omega$  LISN port (to which the EUT is connected), as terminated into a 50  $\Omega$  EMI receiver or spectrum analyzer. All radio-noise voltage and current measurements shall be made on each current-carrying conductor at the plug end of the EUT power cord or calibrated extension cord by the use of mating plugs and receptacles on the EUT and LISN, if used. The manufacturer shall test equipment with power cords that are normally supplied or recommended by the manufacturer and that have electrical and shielding characteristics that are the same as those cords normally supplied or recommended. For measurements using a LISN, the 50  $\Omega$  measuring port is terminated into a 50  $\Omega$  EMI receiver or spectrum analyzer. All other ports are terminated into 50  $\Omega$  loads.

Table top devices shall be placed on a platform of nominal size 1 m by 1.5 m, raised 80 cm above the reference ground plane. The vertical conducting plane or wall of an RF-shielded (screened) room shall be located 40 cm to the rear of the EUT. Floor-standing devices shall be placed either directly on the reference ground-plane or on insulating material as described in ANSI C63.4. All other surfaces of tabletop or floor-standing EUTs shall be at least 80 cm from any other grounded conducting surface, including the case or cases of one or more LISNs.

The bandwidth of the test receiver is set at 9 kHz. Verdict Pass
