No.5, 2nd Langshan Road, North District, Hi-tech Industrial Park, Nanshan, Shenzhen, Guangdong, China.

Compliance Laboratory

TEST REPORT

FCC Rules Part 15.231

Report Reference No.......................:	**MTWG22030122-H**
FCC ID... :	**2AY3B-SC93**
Compiled by (position+printed name+signature)..:	File administrators Alisa Luo
Supervised by (position+printed name+signature)..:	Test Engineer Sunny Deng
Approved by (position+printed name+signature)..:	Manager Yvette Zhou
Date of issue...................................:	**March 07, 2022**

Representative Laboratory Name .:	**Shenzhen Most Technology Service Co., Ltd.**
Address	No.5, 2nd Langshan Road, North District, Hi-tech Industrial Park, Nanshan, Shenzhen, Guangdong, China.
Applicant's name...........................:	**Beijing Toplead Technology Co.,Ltd.**
Address	816,Block D, North Zhonghui International Center Shijingshan District Beijing China.
Test specification/ Standard ....:	**47 CFR Part 1.1307** **47 CFR Part 2.1093**
TRF Originator.................................:	Shenzhen Most Technology Service Co., Ltd.

Shenzhen Most Technology Service Co., Ltd. All rights reserved.

Test item description ....:	clock
Trade Mark ....:	Smartro
Model/Type reference.......................:	SC93
Listed Models ....:	N/A
Modulation Type..............................:	ASK
Operation Frequency.......................:	433.92MHz
Hardware version ....:	VER 1.1
Software version ....:	VER 1.2
Rating ....:	DC3V(by Batteries)
Result...:	**PASS**

T E S T   R E P O R T

Equipment under Test	:	clock
Model /Type	:	SC93
Listed Models	:	N/A
Applicant	:	**Beijing Toplead Technology Co.,Ltd.**
Address	:	816,Block D, North Zhonghui International Center Shijingshan District Beijing China
Manufacturer	:	**Beijing Toplead Technology Co.,Ltd.**
Address	:	816,Block D, North Zhonghui International Center Shijingshan District Beijing China

Test Result:	**PASS**

The test report merely corresponds to the test sample.
It is not permitted to copy extracts of these test result without the written permission of the test laboratory.

1. Revision History

Revision	Issue Date	Revisions	Revised By
00	2022.03.07	Initial Issue	Alisa Luo

2.1 RF Exposure Compliance Requirement

2.1.1 Standard Requirement

According to KDB447498D01 General RF Exposure Guidance v06
4.3.1. Standalone SAR test exclusion considerations
Unless specifically required by the published RF exposure KDB procedures, standalone 1-g head or body and 10-g extremity SAR evaluation for general population exposure conditions, by measurement or numerical simulation, is not required when the corresponding SAR Exclusion Threshold condition, listed below, is satisfied.

2.1.2 Limits

The 1-g and 10-g SAR test exclusion thresholds for 100 MHz to 6 GHz at test separation distances ≤ 50 mm are determined by:
[(max. power of channel, including tune-up tolerance, mW)/(min. test separation distance, mm)] ·
[$\sqrt{f(GHz)}$] ≤ 3.0 for 1-g SAR and ≤ 7.5 for 10-g extremity SAR, where
f(GHz) is the RF channel transmit frequency in GHz
Power and distance are rounded to the nearest mW and mm before calculation[17]
The result is rounded to one decimal place for comparison
The test exclusions are applicable only when the minimum test separation distance is ≤ 50 mm and for transmission frequencies between 100 MHz and 6 GHz. When the minimum test separation distance is < 5 mm, a distance of 5 mm is applied to determine SAR test exclusion

2.1.3 EUT RF Exposure

EIRP =PT*GT= $(E \times D)^2 / 30$
where:
PT = transmitter output power in watts,
GT = numeric gain of the transmitting antenna (unitless),
E = electric field strength in V/m, ---$10^{(dB\mu V/m)/20}/10^6$,
D = measurement distance in meters (m)---3m,
So PT = $(E \times D)^2 /30 / GT$

The worst case (refer to report MTWG22030122) is below:

Antenna polarization: Horizontal		
Frequency (MHz)	Level (dBuV/m)	Polarization
433.92	78.94	Peak
433.92	69.34	Average

Antenna polarization: Vertical		
Frequency (MHz)	Level (dBuV/m)	Polarization
433.92	78.37	Peak
433.92	68.77	Average

For 433.92MHz wireless:
Field strength=78.94 dBuV/m
Ant gain:0dBi;so Ant numeric gain=1.0

EIRP = PT*GT = $(E \times D)^2 /30 = (10^{(dB\mu V/m)/20}/10^6 *3)^2/30 = 0.000027$
So PT= EIRP/GT=0.000027W=0.027mW
So(0.027mW/5mm)* $\sqrt{0.43392GHz}$=0.0078

exclusion=0.0078<3.0 for 1-g SAR

So the SAR report is not required.
