- The Transmitter will go into Standby Mode (I will be light off with Image: Press any button to re-activate it from Standby mode.
- 8. The Remote Transmitter can be used to control up to 2 Receiving Collars
- 9. 2 pairs of metal contacts (1 short and 1 long) are included to suit the length of your dog's hair.

How does the Rechargeable and Waterproof Dog Training Collar Work

The Rechargeable and Waterproof Training Collar has been proven to a safe, comfortable, and effective training system for all dogs weighing over 15lbs. This system allows you to control your dog within a range 1000 feet. At the press of a button, the Remote Transmitter sends sig to the Receiving Collar and activates a Beep, a Vibration or a Static Sł correction output. By using the Training Collar properly, you can correct much of your dog's undesired behavior and teach basic and advanced obedience commands.

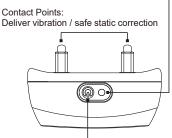

Important: the Training Collar has an effective range up to 1000 feet Hold the Remote Transmitter horizontally away from your body to ach the optimum range. Terrain features, weather, vegetation, transmission from other radio devices and other factors may affect the range of the Remote Transmitter.

How to use the Receiving Collar:

Press the On/Off button to turn the Receiving Collar on. The green LED will illuminate to confirm that the Receiving Collar is ON.

Power Saving Mode: The Receiving Collar will go into Standby Mode if it is idle for more than 5 mins. Any movements will activate the Receiving Collar. If the Receiving Collar does not be activated when you press the Y button on Transmitter, and the Green LED on receiving collar is not on, then gently shake the Receiving Collar, the Receiving Collar will be activated and the Green LED light will illuminate.

Step Encoding the Remote Transmitter and the Receiving Collar:

- 1. Press any button to activate the Remote Transmitter.
- 2. Press the log to choose either Collar 1 or 2.

3. Press the with 3sec on the receiving collar, when the Green LED flash, press the on the Transmitter simultaneously, then Green LED on receiving collar will be steady on. Encode successfully.

4. Repeat steps 2-4 to encode the Receiving Collar 2. Please wait at least 10 seconds after you encode Receiving Collar 1, choose another for Receiving Collar 2.

Note: Most of the Rechargeable and Waterproof Training Collars have already been encoded before leaving the factory. If so, just press any button on the transmitter to activate, then press the (a) with 1 sec on receiving collar to turn on it, after that, you can test the function refer to step 4. (Page 9)

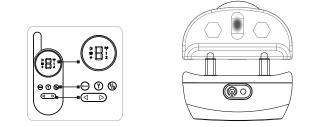

Step Testing the Rechargeable and Waterproof Training Collar: Testing the Static Shock ***** Function

The static impulse generated by the Receiving Collar cannot be seen by naked eyes. Test whether the Static Shock Function works by using the following procedure:

 Press the "Mode" button on Remote Transmitter to select Shock mode. The intensity of the Static Shock can be adjusted by pressing Up/Down button(Decomposition by press the launch (Y) button on the Remote Transmitter

• If the Test Light flashes, the Static Shock Function is working correctly.

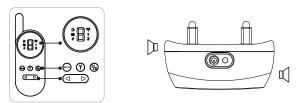

Testing the Vibration ^{III} Function

- Press the "Mode" button on Remote Transmitter to select Vibration mode. The intensity of the vibration can be adjusted by pressing Up/Down button
 Image: Select the optimized select the optized select the optimized select the optimized
- Press the launch (Y) button on the Remote Transmitter. If the Receiving Collar vibrates, the Vibration Function is working correctly.

Testing the Beep D Function

- Press the **Mode** button on Remote Transmitter to select Beep Mode.
- Press the Y button on the Remote Transmitter.
- If the Receiving Collar beeps, the Beep Function is working correctly.

Step Fitting the Receiving Collar to your dog:

1. Center the Contact Points under your dog's neck(A).

2. The Receiving Collar should be positioned snugly around your dog's neck.

Important: Make sure that you can fit one finger between the strap and your dog's neck(B).

Note: Choose the correct Contact Points to suit the length of your dog's hair. If your dog has long hair or a thick coat, use the longer Contact Points.

11

I have fitted the Rechargeable and Waterproof Training Collar correctly, but	
my dog is not responding.	

9

- Ensure that the batteries are fully charged. You need to charge both the Remote Transmitter and the Receiving Collar for about 2 hours before they can be used for the first time.
- Check the Remote Transmitter can adjust the intensity level of the vibration or static shock to higher level more than level 1.
- Restart the Receiving collar by pressing the On/ Off button.
- Test the 3 functions (Beep, Vibration and Static Shock) before using the Receiving Collar for the first time. Please refer to "Step 4" (page 9) for instructions on how to do this.
- The Receiving collar will go into Standyby Mode if it is idle for more than 5 minutes. Any movements will re-activate it.
- Make sure that the Contact Points are touching your dog's skin.
- Trim your dog's fur where the Contact Points touch the neck. Ensure that you are using the correct set of Contact Points suitable for the length of your dog's fur.
- If none of the above works, encode the Remote Transmitter and the Receiving Collar again. See "Step 3" (Page 9) for instructions on how to do this.
- ------
- I am trying to test the Receiving Collar manually, but it does not work.
- If you want to test the Receiving Collar manually on your hand or leg, please touch the 2 Contact Points simultaneously. Touching only one of the Contact Points will not work.

The Receiving Collar is broken. It has not worked since I dropped it.

• The Receiving Collar is not designed to be drop-proof. Please do not drop the Receiving Collar, as this will damage the interior circuits.

The Remote Transmitter does not work

• You must charge the Remote Transmitter before you use it for the first time. Charging time is typically 2.5 hours.

10

- Ensure that the Remote Transmitter has adequate power.
- Remote Transmitter will automatically go into Standby Mode if it is idle
- for 1 min. No LED light will be illuminated at this time. Press any button to re-activate the Remote Transmitter.

General Tips for Training Your Dog

- Eliminate one behavioral problem or teach one command at a time. If you move too fast with the training, your dog may become confused.
- Be consistent. Give your dog a single Beep, Vibration, or Static Shock for each misbehavior.
- Do not over-correct your dog. Use a few stimulations as possible during training.
- Unless you can supervise him/ her, it is recommended that you restrain your dog from environments in which he/ she has a history of misbehaving. However, setting up a training session in this case can dramatically improve your chances of success.
- If your dog reacts to the training by hiding or acting fearfully, redirect his/ her attention to a simple and appropriate behavior, such as the "Sit!" command.

FCC Caution:

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Any Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

Note: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

-Reorient or relocate the receiving antenna.

-Increase the separation between the equipment and receiver.

-Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.

-Consult the dealer or an experienced radio/TV technician for help.

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment.
