| Bluetooth | : | | | |
| Frequency Range | : 2402MHz-2480MHz | | | |
| Channel Number | : 40 channels for Blueto | oth V5.0 (DTS) | | |
| Channel Spacing | : 2MHz for Bluetooth V5 | 5.0 (DTS) | | |
| Modulation Type | : GFSK for Bluetooth VS | 5.0 (DTS) | | |
| Bluetooth Version | : V5.0 | | | |
| Antenna Description | : PCB Antenna, 0.5dBi(| Max.) | | |
| WIFI(2.4G Band) | : | | | |
| Frequency Range | : 2412MHz-2462MHz | | | |
| Channel Spacing | : 5MHz | | | |
| Channel Number | : 11 Channels for 20MH | lz bandwidth (2412~2462 | 2MHz) | |
| Modulation Type | : IEEE 802.11b: DSSS | CCK, DQPSK, DBPSK) | | |
| | IEEE 802.11g: OFDM | (64QAM, 16QAM, QPSK | (, BPSK) | |
| | IEEE 802.11n: OFDM | (64QAM, 16QAM, QPSK | (, BPSK) | |
| Antenna Description | : External Antenna, 5dB | i(Max.) | | |
| Exposure category | : General population/un | controlled environment | | |
| EUT Type | : Production Unit | | | |
| Device Type | : Mobile Device | | | |
| | | | | |

2. Evaluation Method

Systems operating under the provisions of FCC 47 CFR section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines. In accordance with 47 CFR FCC Part 2 Subpart J, section 2.1091 this device has been defined as mobile device whereby a distance of 0.2m normally can be maintained between the user and the device, and below RF Permissible Exposure limit shall comply with.

In accordance with KDB447498D01 for Simultaneous transmission MPE test exclusion applies when the sum of the MPE ratios for all simultaneous transmitting antennas incorporated in a host device, based on the calculated/estimated, numerically modelled or measured field strengths or power density, is \leq 1.0. The MPE ratio of each antenna is determined at the minimum test separation distance required by the operating configurations and exposure conditions of the host device, according to the ratio of field strengths or power density to MPE limit, at the test frequency. Either the maximum peak or spatially averaged results from measurements or numerical simulations may be used to determine the MPE ratios. Spatial averaging does not apply when MPE is estimated using simple calculations based on far-field plane-wave equivalent

conditions. The antenna installation and operating requirements for the host device must meet the minimum test separation distances required by all antennas, in both standalone and simultaneous transmission operations, to satisfy compliance.

3. Limit

3. 1 Refer Evaluation Method

8. Measurement Results

8.1 Standalone MPE Evaluation

As declared by the Applicant, the EUT is a wireless device used in a fix application, at least 20 cm from any body part of the user or nearby persons; from the maximum EUT RF output power, the minimum separation distance, r =20cm, as well as the gain of the used antenna refer to antenna information, the RF power density can be obtained.

TO ACIAL AND

2. Output power was adjust to duty cycle at 100% if measured duty cycle less than 98%;

3. MPE evaluate distance is 20cm from user manual provide by manufacturer.

8.2 Simultaneous Transmission MPE Evaluation

The EUT equiped with one BTLE antenna and one 2.4GWIFI antenna. so need consider simultaneous transmission;

According to KDB447498 for Transmitters used in mobile exposure conditions for simultaneous transmission operations;

 $\sum \int of MPE ratios \le 1.0$

| Modulation Type | MPE _{Antenna BTLE} (mW/cm ²) | MPE _{Antenna WIFI} (mW/cm ²) | ∑MPE ratios | Limit | Results |
|-----------------|--|--|----------------|-------|---------|
| BTLE&2.4GWIFI | 0.0002 | 0.0199 | 0.0201 | 1.0 | PASS |

9. Conclusion

The measurement results comply with the FCC Limit per 47 CFR 2.1091 for the uncontrolled RF Exposure of mobile device.
