## TEST REPORT

**Product** Wireless Voltage Monitor

Trade mark SmartSafe

VM13 Model/Type reference **Serial Number** N/A

**Report Number** EED32P81719301

**FCC ID** : 2AYANVM13 Date of Issue : Nov. 30, 2023

**Test Standards** : 47 CFR Part 15 Subpart C

Test result : PASS

### Prepared for:

SHENZHEN SMARTSAFE TECH CO., LTD 3F, Building B, Qiao'an Technology Industrial Park, Guanlan, Longhua New District, Shenzhen, China

## 5.2 General Description of EUT

-		
Product Name:	Wireless Voltage Monitor	
Model No.:	VM13	
Trade mark:	SmartSafe	
Product Type:	☐ Mobile ☐ Portable ☒ Fix Location	6
Operation Frequency:	2402MHz~2480MHz	
Modulation Type:	GFSK	
Transfer Rate:	⊠1Mbps ⊠2Mbps	
Number of Channel:	40	
Antenna Type:	PCB Antenna	
Antenna Gain:	2.19dBi	
Power Supply:	Battery DC 3.7V	1:0
Test Voltage:	DC 3.7V	(67)
Sample Received Date:	Oct. 27, 2023	
Sample tested Date:	Oct. 27, 2023 to Nov. 16, 2023	

Report No. : EED32P81719301 Page 6 of 47

Channel	Frequency	Channel	Frequency	Channel	Frequency	Channel	Frequency
0	2402MHz	10	2422MHz	20	2442MHz	30	2462MHz
1	2404MHz	11	2424MHz	21	2444MHz	31	2464MHz
2	2406MHz	12	2426MHz	22	2446MHz	32	2466MHz
3	2408MHz	13	2428MHz	23	2448MHz	33	2468MHz
4	2410MHz	14	2430MHz	24	2450MHz	34	2470MHz
5	2412MHz	15	2432MHz	25	2452MHz	35	2472MHz
6	2414MHz	16	2434MHz	26	2454MHz	36	2474MHz
7	2416MHz	17	2436MHz	27	2456MHz	37	2476MHz
8	2418MHz	18	2438MHz	28	2458MHz	38	2478MHz
9	2420MHz	19	2440MHz	29	2460MHz	39	2480MHz

#### Note:

In section 15.31(m), regards to the operating frequency range over 10 MHz, the lowest frequency, the middle frequency, and the highest frequency of channel were selected to perform the test, and the selected channel see below:

Channel	Frequency
The lowest channel (CH0)	2402MHz
The middle channel (CH19)	2440MHz
The highest channel (CH39)	2480MHz

## **5.3 Test Configuration**

EUT Test Software	e Settings:						
Test Software of EUT:		SSCOM					
EUT Power Grade:		Default(Power level is built-in set parameters and cannot be changed and selected)					
Use test software to transmitting of the E		est frequency	v, the middle frequer	ncy and the highest f	requency keep		
Test Mode	Modu	lation	Rate	Channel	Frequency(MHz)		
Mode a	GF	SK	1Mbps	CH0	2402		
Mode b	GF	SK	1Mbps	CH19	2440		
Mode c	Mode c GFSK		1Mbps	CH39	2480		
Mode d	de d GFSK		Mode d GFSK		2Mbps	CH0	2402
Mode e	GFSK		Mode e GFSK		2Mbps	CH19	2440
Mode f	GFSK		2Mbps	CH39	2480

	Atmospheric Pressure:	1010mbar					
	Conducted Emissions:						
	Temperature:	22~25.0 °C		(3)		(30)	
	Humidity:	50~55 % RH		(0,)		(0,)	
	Atmospheric Pressure:	1010mbar					
	RF Conducted:						
	Temperature:	22~25.0 °C	(3)		(3)		
r)	Humidity:	50~55 % RH	(6,2)		(6,2,2)		(6,7)
	Atmospheric Pressure:	1010mbar					

## 5.5 Description of Support Units

The EUT has been tested with associated equipment below.

1) support equipment

Description	escription Manufacturer		Certification	Supplied by
Netbook	DELL	Latitude 3490	FCC&CE	СТІ

### 5.6 Test Location

All tests were performed at:

Centre Testing International Group Co., Ltd

Building C, Hongwei Industrial Park Block 70, Bao'an District, Shenzhen, China

Telephone: +86 (0) 755 33683668 Fax:+86 (0) 755 33683385

No tests were sub-contracted. FCC Designation No.: CN1164

## 5.7 Measurement Uncertainty (95% confidence levels, k=2)

No.	Item	Measurement Uncertainty		
1	Radio Frequency	7.9 x 10 <sup>-8</sup>		
2	DC newer conducted	0.46dB (30MHz-1GHz)		
2	RF power, conducted	0.55dB (1GHz-40GHz)		
	()	3.3dB (9kHz-30MHz)		
2	Dadiated Spurious emission test	4.3dB (30MHz-1GHz)		
3	Radiated Spurious emission test	4.5dB (1GHz-18GHz)		
(P)		3.4dB (18GHz-40GHz)		
97	Conduction emission	3.5dB (9kHz to 150kHz)		
4	Conduction emission	3.1dB (150kHz to 30MHz)		
5	Temperature test	0.64°C		
6	Humidity test	3.8%		
7	DC power voltages	0.026%		

Report No. : EED32P81719301 Page 9 of 47

### 7 Test results and Measurement Data

## 7.1 Antenna Requirement

Standard requirement: 47 CFR Part 15C Section 15.203 /247(c)

15.203 requirement:

An intentional radiator shall be designed to ensure that no antenna other than that furnished by the responsible party shall be used with the device. The use of a permanently attached antenna or of an antenna that uses a unique coupling to the intentional radiator, the manufacturer may design the unit so that a broken antenna can be replaced by the user, but the use of a standard antenna jack or electrical connector is prohibited.

15.247(b) (4) requirement:

The conducted output power limit specified in paragraph (b) of this section is based on the use of antennas with directional gains that do not exceed 6 dBi. Except as shown in paragraph (c) of this section, if transmitting antennas of directional gain greater than 6 dBi are used, the conducted output power from the intentional radiator shall be reduced below the stated values in paragraphs (b)(1), (b)(2), and (b)(3) of this section, as appropriate, by the amount in dB that the directional gain of the antenna exceeds 6 dBi.

**EUT Antenna:** Please see Internal photos

The antenna is PCB antenna. The best case gain of the antenna is 2.19dBi.

## 7.2 Conducted Emissions

Test Requirement: 47 CFR Part 15C Section 15.207  Test Method: ANSI C63.10: 2013  Test Frequency Range: 150kHz to 30MHz  Receiver setup: RBW=9 kHz, VBW=30 kHz, Sweep time=auto  Limit:	1.2	Conducted Emis	SIUIIS		(-43)				
Test Procedure:  150kHz to 30MHz  Receiver setup:  RBW=9 kHz, VBW=30 kHz, Sweep time=auto  Limit (dBuV)  Quasi-peak Average  0.15-0.5 66 to 56° 56 to 46°  0.5-5 56 46  5-30 60 50  *Decreases with the logarithm of the frequency.  Test Setup:  11 The mains terminal disturbance voltage test was conducted in a shielded room.  2) The EUT was connected to AC power source through a LISN 1 (Line Impedance Stabilization Network) which provides a 50/2/50µH + 50 linear impedance. The power cables of all other units of the EUT were connected to a second LISN 2, which was bonded to the ground reference plane in the same way as the LISN 1 for the unit being measured. A multiple socket outlet strip was used to connect multiple power cables to a single LISN provided the rating of the LISN was not exceeded.  3) The tabletop EUT was placed upon a non-metallic table 0.8m above the ground reference plane. And for floor-standing arrangement, the EUT was placed on the horizontal ground reference plane. The rear of the EUT shall be 0.4 m from the vertical ground reference plane. The vertical ground reference plane. The LISN as not exceeded on the horizontal ground reference plane. The vertical ground reference plane. The LISN as not exceeded on the horizontal ground reference plane. The LISN as not exceeded on the horizontal ground reference plane. The LISN as not exceeded on the horizontal ground reference plane. The LISN as not exceeded to the LISN as not exceeded.  3) The tabletop EUT was placed upon a non-metallic table 0.8m above the ground reference plane. The LISN 1 and the EUT - LISN 2.  5) In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed according to ANSI C63.10: 2013 on conducted mea		Test Requirement:	47 CFR Part 15C Section 15.	207	(0.)				
Receiver setup:  RBW=9 kHz, VBW=30 kHz, Sweep time=auto  Limit (dBuV)  Quasi-peak Average  0.15-0.5 66 to 56* 56 to 46*  0.5-5 56 46  5-30 60 50  *Decreases with the logarithm of the frequency.  Test Setup:  Test Setup:  1) The mains terminal disturbance voltage test was conducted in a shielded room.  2) The EUT was connected to AC power source through a LISN 1 (Line Impedance Stabilization Network) which provides a 500/50µH + 50 linear impedance. The power cables of all other units of the EUT were connected to a second LISN 2, which was bonded to the ground reference plane in the same way as the LISN 1 for the unit being measured. A multiple socket outlet strip was used to connect multiple power cables to a single LISN provided the rating of the LISN was not exceeded.  3) The tabletop EUT was placed upon a non-metallic table 0.8m above the ground reference plane. And for floor-standing arrangement, the EUT was placed on the horizontal ground reference plane.  4) The test was performed with a vertical ground reference plane. The vertical ground reference plane was bonded to the horizontal ground reference plane was bonded to the horizontal ground reference plane. The vertical ground reference plane in the surface of the EUT shall be 0.4 m from the vertical ground reference plane. The vertical ground reference plane was bonded to the horizontal ground reference plane in the unit under test and bonded to a ground reference plane. The vertical ground reference plane for LISNs mounted on top of the ground reference plane plane for LISNs mounted on top of the ground reference plane plane for LISNs mounted on top of the ground reference plane. This distance was between the closest points of the LISN 1 and the EUT. All other units of the EUT and associated equipment was at least 0.8 m from the burds of equipment and all of the interface cables must be changed according to ANSI C63.10: 2013 on conducted measurement.  All modes were tested, only the worst case mode a was recorded in the report.		Test Method:	ANSI C63.10: 2013						
Limit:    Frequency range (MHz)		Test Frequency Range:	150kHz to 30MHz						
Test Procedure:  1) The mains terminal disturbance voltage test was conducted in a shielded room.  2) The EUT was connected to AC power source through a LISN 1 (Line Impedance Stabilization Network) which provides a 50Ω/50μH + 5Ω linear impedance. The power cables of all other units of the EUT were connected to a second LISN 2, which was bonded to the ground reference plane in the same way as the LISN 1 for the unit being measured. A multiple socket outlet strip was used to connect multiple power cables to a single LISN provided the rating of the LISN was not exceeded.  3) The tabletop EUT was placed upon a non-metallic table 0.8m above the ground reference plane. And for floor-standing arrangement, the EUT was placed on the horizontal ground reference plane. The vertical ground reference plane was bended to the ground reference plane. The test was performed with a vertical ground reference plane. The vertical ground reference plane was bonded to the horizontal ground reference plane. The vertical ground reference plane was bonded to the horizontal ground reference plane. The vertical ground reference plane was bonded to the horizontal ground reference plane. The vertical ground reference plane. The LISN 1 was placed 0.8 m from the boundary of the unit under test and bonded to a ground reference plane. The vertical ground reference plane was bonded to the horizontal ground reference plane. This distance was between the closest points of the LISN 1 and the EUT. All other units of the EUT and associated equipment was at least 0.8 m from the LISN 2.  5) In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed according to ANSI C63.10: 2013 on conducted measurement.		Receiver setup:	RBW=9 kHz, VBW=30 kHz, S	Sweep time=auto					
Test Procedure:  1) The mains terminal disturbance voltage test was conducted in a shielded room.  2) The EUT was connected to AC power source through a LISN 1 (Line Impedance Stabilization Network) which provides a 50Ω/50µH + 5Ω linear impedance. The power cables of all other units of the EUT were connected to a second LISN 2, which was bonded to the ground reference plane in the same way as the LISN 1 for the unit being measured. A multiple socket outlet strip was used to connect multiple power cables to a single LISN provided the rating of the LISN was not exceeded.  3) The tabletope EUT was placed upon a non-metallic table 0.8m above the ground reference plane. And for floor-standing arrangement, the EUT was placed upon a non-metallic table 0.8m above the ground reference plane. And for floor-standing arrangement, the EUT was placed on the horizontal ground reference plane.  4) The test was performed with a vertical ground reference plane. The vertical ground reference plane has bonded to the horizontal ground reference plane. The LISN 1 was placed 0.8 m from the boundary of the unit under test and bonded to a ground reference plane. The vertical ground reference plane has bonded to the horizontal ground reference plane. The LISN 1 was placed 0.8 m from the boundary of the unit under test and bonded to a ground reference plane for LISNs mounted on top of the ground reference plane. This distance was between the closest points of the LISN 1 and the EUT. All other units of the EUT and associated equipment was at least 0.8 m from the LISN 2.  5) In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed according to ANSI C63.10: 2013 on conducted measurement.		Limit:	[ [ ] [ ] [ ] [ ] [ ] [ ] [ ] [ ] [ ] [	Limit (d	lBuV)				
Test Setup:  1) The mains terminal disturbance voltage test was conducted in a shielded room.  2) The EUT was connected to AC power source through a LISN 1 (Line impedance. # 7.3 Maximum Conducted Output Power

Test Requirement:	47 CFR Part 15C Section 15.247 (b)(3)	
Test Method:	ANSI C63.10 2013	
Test Setup:		(2)
	Control Computer Power Port Attenuator Table  RF test System System Instrument	
	Remark: Offset=Cable loss+ attenuation factor.	
Test Procedure:	<ul> <li>a) Set the RBW ≥ DTS bandwidth.</li> <li>b) Set VBW ≥ 3 × RBW.</li> <li>c) Set span ≥ 3 x RBW</li> <li>d) Sweep time = auto couple.</li> <li>e) Detector = peak.</li> <li>f) Trace mode = max hold.</li> </ul>	0
Limit:	g) Allow trace to fully stabilize. h) Use peak marker function to determine the peak amplitude level. 30dBm	
Test Mode:	Refer to clause 5.3	
Test Results:	Refer to Appendix BLE	(O.)

## 7.4 DTS Bandwidth

Test Requirement:	47 CFR Part 15C Section 15.247 (a)(2)						
Test Method:	ANSI C63.10 2013						
Test Setup:							
	Confired Control Control Power Supply Attenuator  Table  RF test System  Instrument  Instrument						
	Remark: Offset=Cable loss+ attenuation factor.						
Test Procedure:	<ul> <li>a) Set RBW = 100 kHz.</li> <li>b) Set the VBW ≥[3 × RBW].</li> <li>c) Detector = peak.</li> <li>d) Trace mode = max hold.</li> <li>e) Sweep = auto couple.</li> <li>f) Allow the trace to stabilize.</li> <li>g) Measure the maximum width of the emission that is constrained by the frequencies associated with the two outermost amplitude points (upper and lower frequencies) that are attenuated by 6 dB relative to the maximum level measured in the fundamental emission.</li> </ul>						
Limit:	≥ 500 kHz						
Test Mode:	Refer to clause 5.3						
Test Results:	Refer to Appendix BLE						

# 7.5 Maximum Power Spectral Density

100		
Test Requirement:	47 CFR Part 15C Section 15.247 (e)	
Test Method:	ANSI C63.10 2013	
Test Setup:		
	Control Computer Power Pools Power Power Pools P	RF test System Instrument
	Remark: Offset=Cable loss+ attenuat	ion factor.
Test Procedure:	within the RBW.	bandwidth.
Limit:	≤8.00dBm/3kHz	
Test Mode:	Refer to clause 5.3	
Test Results:	Refer to Appendix BLE	

## 7.6 Band Edge measurements and Conducted Spurious Emission

	Test Requirement:	47 CFR Part 15C Section 15.247 (d)
	Test Method:	ANSI C63.10 2013
2000	Test Setup:	Control Control Control Power Supply  Power Supply  Table  RF test System System Instrument
,		Remark: Offset=Cable loss+ attenuation factor.
700 P	Test Procedure:	a) Set RBW =100KHz. b) Set VBW = 300KHz. c) Sweep time = auto couple. d) Detector = peak. e) Trace mode = max hold. f) Allow trace to fully stabilize. g) Use peak marker function to determine the peak amplitude level.
270	Limit:	In any 100 kHz bandwidth outside the frequency band in which the spread spectrum intentional radiator is operating, the radio frequency power that is produced by the intentional radiator shall be at least 20 dB below that in the 100 kHz bandwidth within the band that contains the highest level of the desired power, based on either an RF conducted or a radiated measurement.
	Test Mode:	Refer to clause 5.3
	Test Results:	Refer to Appendix BLE

Report No. : EED32P81719301 Page 21 of 47

Figure 1. Below 30/0/11

Figure 2. 30MHz to 1GHz

Figure 3. Above 1 GHz

#### Test Procedure:

- a. 1) Below 1G: The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter semi-anechoic camber. The table was rotated 360 degrees to determine the position of the highest radiation.
  - 2) Above 1G: The EUT was placed on the top of a rotating table 1.5 meters above the ground at a 3 meter semi-anechoic camber. The table was rotated 360 degrees to determine the position of the highest radiation.

Note: For the radiated emission test above 1GHz:

Place the measurement antenna away from each area of the EUT determined to be a source of emissions at the specified measurement distance, while keeping the measurement antenna aimed at the source of emissions at each frequency of significant emissions, with polarization oriented for maximum response. The measurement antenna may have to be higher or lower than the EUT, depending on the radiation pattern of the emission and staying aimed at the emission source for receiving the maximum signal. The final measurement antenna elevation shall be that which maximizes the emissions. The measurement antenna elevation for maximum emissions shall be restricted to a range of heights of from 1 m to 4 m above the ground or reference ground plane.

- b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- c. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both

Test Results:	Pass
Test Mode:	Refer to clause 5.3
	i. Repeat above procedures until all frequencies measured was complete.
	h. The radiation measurements are performed in X, Y, Z axis positioning for Transmitting mode, and found the X axis positioning which it is the worst case.
	g. Test the EUT in the lowest channel (2402MHz),the middle channel (2440MHz),the Highest channel (2480MHz)
	f. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.
	e. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.
	d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters (for the test frequency of below 30MHz, the antenna was tuned to heights 1 meter) and the rotatable table was turned from 0 degrees to 360 degrees to find the maximum reading.
	horizontal and vertical polarizations of the antenna are set to make the measurement.

### Radiated Spurious Emission below 1GHz:

During the test, the Radiates Emission from 30MHz to 1GHz was performed in all modes, only the worst case lowest channel for GFSK 1M was recorded in the report.

#### Remark:

- 1) The field strength is calculated by adding the Antenna Factor, Cable Factor & Preamplifier. The basic equation with a sample calculation is as follows:
  - Final Test Level =Receiver Reading + Antenna Factor + Cable Factor Preamplifier Factor
- 2) Scan from 9kHz to 25GHz, the disturbance above 10GHz and below 30MHz was very low. As shown in this section, for frequencies above 1GHz, the field strength limits are based on average limits. However, the peak field strength of any emission shall not exceed the maximum permitted average limits specified above by more than 20 dB under any condition of modulation. So, only the peak measurements were shown in the report.

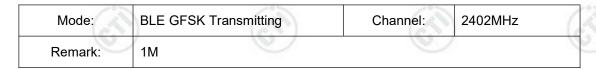

### **Restricted bands:**

### Test plot as follows:

	1	2483.5	6.57	44.53	51.10	74.00	22.90	PASS	Vertical	PK
	2	2483.5	6.57	24.09	30.66	54.00	23.34	PASS	Vertical	AV

#### Note:

The field strength is calculated by adding the Antenna Factor, Cable Factor & Preamplifier. The basic equation with a sample calculation is as follows:

Final Test Level =Receiver Reading -Correct Factor

Correct Factor = Preamplifier Factor - Antenna Factor - Cable Factor
