

# FCC ID: 2AYHE-2201B

#### Applied procedures / limit

According to FCC §15.247(i) and §1.1307(b)(1), systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy level in excess of the Commission's guidelines.

| Frequency<br>Range (MHz) | Electric Field<br>Strength (E)<br>(V/m) | Magnetic Field<br>Strength (H)<br>(A/m) | Power Density (S)<br>(mW/ cm <sup>2</sup> ) | Averaging Time<br> E  <sup>2</sup> , H  <sup>2</sup> or S<br>(minutes) |  |
|--------------------------|---|---|---|--|--|
| 0.3-3.0                  | 614                                     | 1.63                                    | (100)*                                      | 6  |  |
| 3.0-30                   | 1842 / f                                | 4.89 / f                                | (900 / f)*                                  | 6  |  |
| 30-300                   | 61.4                                    | 0.163                                   | 1.0   | 6  |  |
| 300-1500                 |   |   | F/300                                       | 6  |  |
| 1500-100,000             |   |   | 5   | 6  |  |

# Limits for Occupational / Controllad E

Note: *f* is frequency in MHz

\* = Power density limit is applicable at frequencies greater than 100 MHz

#### Limits for General Population / Uncontrolled Exposure

| Frequency<br>Range (MHz) | Electric Field<br>Strength (E)<br>(V/m) | Magnetic Field<br>Strength (H)<br>(A/m) | Power Density (S)<br>(mW/ cm <sup>2</sup> ) | Averaging Time<br> E  <sup>2</sup> , H  <sup>2</sup> or S<br>(minutes) |  |
|--------------------------|---|---|---|--|--|
| 0.3-1.34                 | 614                                     | 1.63                                    | (100)*                                      | 30   |  |
| 1.34-30                  | 824/f                                   | 2.19/f                                  | (180/f)*                                    | 30   |  |
| 30-300                   | 27.5                                    | 0.073                                   | 0.2   | 30   |  |
| 300-1500                 |   |   | F/1500                                      | 30   |  |
| 1500-100,000             |   |   | 1.0   | 30   |  |

Note: f = frequency in MHz

\* = Plane-wave equivalent power density

## MPE PREDICTION

Predication of MPE limit at a given distance, Equation from OET Bulletin 65, Edition 97-01

$$S = PG/4\pi R^2$$

Where: S = power density

P = power input to antenna

G = power gain of the antenna in the direction of interest relative to an isotropic radiator

R = distance to the center of radiation of the antenna, R=0.2m

### **TEST RESULTS**

|                    | Tune up<br>Produce<br>power | Maximu<br>m peak<br>output<br>power<br>(dBm) | Output<br>power<br>to<br>antenna<br>(mW) | Antenna<br>Gain<br>(numeric) | Power<br>Density<br>(S)<br>(mW/<br>cm2) | Limit<br>(mW/<br>cm2) | Result |
|--------------------|-----------------------------|--|--|------------------------------|---|-----------------------|--------|
| 802.11<br>n20      | 11±1                        | 12   | 15.85                                    | 3.01<br>(4.79dBi)            | 0.00949                                 | 1                     | Pass   |
| 802.11 U-<br>NII-1 | 6±1                         | 7  | 5.01                                     | 2.42<br>(3.84dBi)            | 0.00241                                 | 1                     | Pass   |
| 802.11 U-<br>NII-3 | 5±1                         | 6  | 3.98                                     | 3.45<br>(5.38dBi)            | 0.00273                                 | 1                     | Pass   |

#### **Conclusion:**

For the max Power Density: 0.00949 < 1, the SAR testing is not required.
