# TEST REPORT

Report No.: CQASZ20210400527E

Applicant: Shenzhen Inkbird Technology Co., Ltd.

**Address of Applicant:** Floor 4th East, Building 713, Pengji Industrial Zone, LianTang, Luohu District,

Shenzhen, PRC.

**Equipment Under Test (EUT):** 

Temperature controller **EUT Name:** 

Model No.: IPT-2CH **Brand Name: INKBIRD** 

Standards: 47 CFR Part 15, Subpart B, Class B

**Date of Receipt:** 2021-4-23

2021-4-23 to 2021-6-1 **Date of Test:** 

Date of Issue: 2021-6-1 **Test Result:** PASS\*

\*In the configuration tested, the EUT complied with the standards specified above

lewis 2hou Tested By: (Lewis Zhou) Reviewed By: (Jun Li) Approved By:

The test report is effective only with both signature and specialized stamp, The result(s) shown in this report refer only to the sample(s) tested. Without written approval of CQA, this report can't be reproduced except in full.

## **Test Summary**

Test Item	Test Requirement	Test method	Result	
Radiated Emission	47 CFR Part 15B	ANSI C63.4-2014	PASS	
Conducted Emission (150KHz to 30MHz)	47 CFR Part 15B	ANSI C63.4-2014	PASS	

Highest frequency generated or used in the device or on which the device operates or tunes  (MHz)	Upper frequency of measurement Range (MHz)	
Below 1.705	30	
1.705 to 108	1000	
108 to 500	2000	
500 to 1000	5000	
Above 1000	5th harmonic of the highest frequency or 40GHz, whichever is lower	

#### Remark:

The tested sample(s) and the sample information are provided by the client.

## 5 Test results and Measurement Data

#### 5.1 Conducted Emissions

Test Requirement: 47 CFR Part 15B
Test Method: ANSI C63.4
Test frequency range: 150kHz to 30MHz

Limit:

Fraguency range (MHz)	Limit (dBμV)			
Frequency range (MHz)	Quasi-peak	Average		
0.15-0.5	66 to 56*	56 to 46*		
0.5-5	56	46		
5-30	60	50		

<sup>\*</sup> Decreases with the logarithm of the frequency.

**Test Procedure:** 

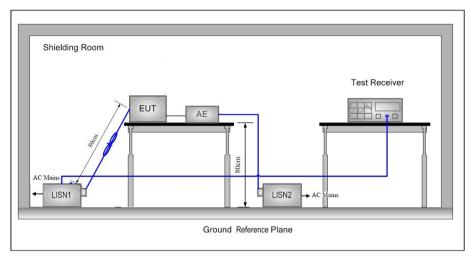

- 1) The mains terminal disturbance voltage test was conducted in a shielded room.
- 2) The EUT was connected to AC power source through a LISN 1 (Line Impedance Stabilization Network) which provides a  $50\Omega/50\mu H + 5\Omega$  linear impedance. The power cables of all other units of the EUT were connected to a second LISN 2, which was bonded to the ground reference plane in the same way as the LISN 1 for the unit being measured. A multiple socket outlet strip was used to connect multiple power cables to a single LISN provided the rating of the LISN was not exceeded.
- 3) The tabletop EUT was placed upon a non-metallic table 0.8m above the ground reference plane. And for floor-standing arrangement, the EUT was placed on the horizontal ground reference plane,
- 4) The test was performed with a vertical ground reference plane. The rear of the EUT shall be 0.4 m from the vertical ground reference plane. The vertical ground reference plane was bonded to the horizontal ground reference plane. The LISN 1 was placed 0.8 m from the boundary of the unit under test and bonded to a ground reference plane for LISNs mounted on top of the ground reference plane. This distance was between the closest points of the LISN 1 and the EUT. All other units of the EUT and associated equipment was at least 0.8 m from the LISN 2.
- 5) In order to find the maximum emission, the relative positions of equipment and all of the interface cables must be changed according to ANSI C63.4 on conducted measurement.

# Shenzhen Huaxia Testing Technology Co., Ltd

Report No.: CQASZ20210400527E

Test Setup:

Instruments Used: Refer to section 5 for details

Test Mode: Normal working

Test Results: Pass

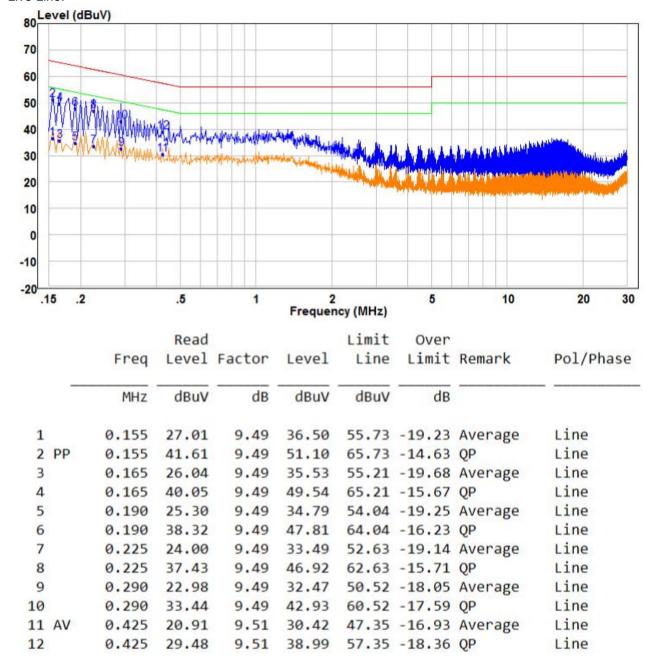

#### **Measurement Data**

An initial pre-scan was performed on the live and neutral lines with peak detector.

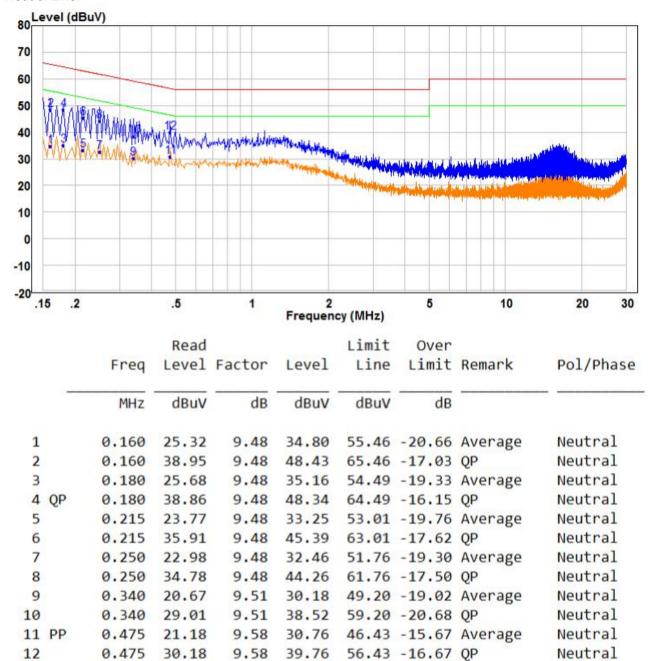

Quasi-Peak and Average measurement were performed at the frequencies with maximized peak emission were detected.

#### Live Line:

#### Neutral Line:

#### Notes:

- 1. The following Quasi-Peak and Average measurements were performed on the EUT:
- 2. Final Test Level =Receiver Reading + LISN Factor + Cable Loss.
- 3.Pertest the EUT at voltages of 230V and 110V, using a frequency of 50Hz or 60Hz, but find the voltages of 120V and the frequency of 60Hz which is worst case, only the data of the worst-case show in the test report.

#### 5.2 Radiated Emission

Test Requirement: 47 CFR Part 15B
Test Method: ANSI C63.4

**Test site:** Measurement Distance: 3m (Semi-Anechoic Chamber)

Receiver setup:

Limit:

Frequency	Detector		RBW	VBW	Remark		
30MHz-1GHz	Quasi-peak		100kHz	300kHz	Quasi-peak Value		
Above 1GHz	Peak		1MHz	3MHz	Peak Value		
Frequency		Limit (dBµV/m @3m)		/m @3m)	Remark		
30MHz-88MHz		40.0		)	Quasi-peak Value		
88MHz-216MHz		43.5		5	Quasi-peak Value		
216MHz-960MHz		46.0		)	Quasi-peak Value		
960MHz-1GHz		54.0		)	Quasi-peak Value		
Above 1GHz			54.0		Average Value		
		74.0		)	Peak Value		

#### **Test Procedure:**

#### Below 1GHz test procedure as below:

- a. The EUT was placed on the top of a rotating table 0.8 meters above the ground at a 3 meter semi-anechoic camber. The table was rotated 360 degrees to determine the position of the highest radiation.
- b. The EUT was set 3 meters away from the interference-receiving antenna, which was mounted on the top of a variable-height antenna tower.
- c. The antenna height is varied from one meter to four meters above the ground to determine the maximum value of the field strength. Both horizontal and vertical polarizations of the antenna are set to make the measurement.
- d. For each suspected emission, the EUT was arranged to its worst case and then the antenna was tuned to heights from 1 meter to 4 meters and the rota table table was turned from 0 degrees to 360 degrees to find the maximum reading.
- e. The test-receiver system was set to Peak Detect Function and Specified Bandwidth with Maximum Hold Mode.
- f. If the emission level of the EUT in peak mode was 10dB lower than the limit specified, then testing could be stopped and the peak values of the EUT would be reported. Otherwise the emissions that did not have 10dB margin would be re-tested one by one using peak, quasi-peak or average method as specified and then reported in a data sheet.

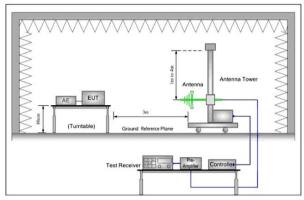

#### Above 1GHz test procedure as below:

- g. Different between above is the test site, change from Semi- Anechoic Chamber to fully Anechoic Chamber ( Above 18GHz the distance is 1 meter).
- h. Repeat above procedures until all frequencies measured was complete

### Test Setup:
