

## **RF EXPOSURE EVALUATION**

Product Name	Portable Bluetooth speaker				
Model Name	ET22				
Additional model	N/A				
Specification	BT 5.0 BDR+EDR; BLE				
Operation Frequency	: 2402-2480MHz				
Number of Channel	79 channels For BR+EDR; 40 channels For BLE				
Type of Modulation	GFSK, Π/4-DQPSK,8DPSK For BR+EDR; GFSK For BLE;				
Antenna installation	: PCB antenna				
Antenna Gain	0 dBi				
Power supply	3.7V DC 2500mAh with lithium battery				
Hardware Version	DCX-461V2.0				
Software Version	: AC692x_SDK_release_V2.3.1				

## Standard Requirement

According to § 15.247(i) and § 1.1307b(1), systems operating under the provisions of this section shall be operated in a manner that ensures that the public is not exposed to radio frequency energy levels in excess of the Commission's guidelines. See KDB 447498 D01 General RF Exposure Guidance v06, section 4. 3. 1.

The 1-g and 10-g SAR test exclusion thresholds for 100MHz to 6GHz at test separation distances  $\leq$  50mm are determined by:

[ (max. power of channel, including tune-up tolerance, mW)/(min. test separation distance, mm)]\*[  $\sqrt{f(GHz)}$ ]  $\leq$  3.0 for 1-g SAR and  $\leq$  7.5 for 10-g SAR extremity SAR, where

- f(GHz) is the RF channel transmit frequency in GHz
- Power and distance are rounded to the nearest mW and mm before calculation
- The result is rounded to one decimal place for comparison.

The test exclusions are applicable only when the minimum test separation distance is ≤ 50mm and for transmission frequencies between 100MHz and 6GHz. When the minimum test separation distance is <5mm, a distance of 5mm is applied to determine SAR test exclusion. Routine SAR evaluation refers to that specifically required by § 2.1093, using measurements or computer simulation. When routine SAR evaluation is not required, portable transmitters with output power greater than the applicable low threshold require SAR evaluation to quality for TCB approval.

Channel (MHz)	Maximum output power (dBm)	tolerance	Max Tune Up Power (dBm)		Calculation results	Limit	Operating Mode
2480	2.88	$2.88 \pm 1$	3.88	5	0.7697	3	BDR+EDR
2402	-1.03	-1.03±1	0.03	5	0.3121	3	BLE

According to KDB 447498, no stand-alone required for BT antenna, and no simultaneous SAR measurement is required.
