LED Lingo

Not fluent in LED blinking? Here's an easy-to-understand explanation.

Solid White
You're good. Device is charging normally. The light will fade off after 5 seconds while still charging.

Blinking Red
There's trouble in paradise. One of these problems is preventing the device from charging:

1. Metal card is blocking the charge, remove card.
2. Phone is misaligned, see alignment guide.
3. Charger is too hot, ensure it's ventilated in a cool spot.

Blinking Green
Issue: Dinner is ready.
Solution: Stop what you're doing and go eat.

Can I Charge It?

Charge Island is compatible with any device with Qi wireless charging. Since phones/devices are released weekly these days, we keep a running list of compatible devices here: [smartish.com/chargeisland](https://www.smartish.com/chargeisland)

Trouble in Paradise?

It Ain't Charging:

1. Check your cable and wall charger to make sure it's connected properly. The LED will turn on for 2 seconds when first connected to power.
2. Check your outlet to make sure it's got juice.
3. Try a different USB port for power.
4. Try removing your phone case.
5. Ensure proper alignment between phone and Charge Island. See alignment guide.
6. Still not working? Are you sure your phone has wireless charging capabilities?

Phone or Charge Island is hot:

1. Ensure proper alignment between phone and Charge Island.
2. Try removing your phone case, or cards if you have a wallet/card case.
3. Check to ensure the bottom exhaust vents are not blocked.
4. Put charger in a cool ventilated spot (e.g. not on a blanket or carpet).

It's Charging Slowly:

1. Ensure proper alignment between phone and Charge Island. Center everything for fastest charge.
2. Try removing your phone case, or cards if you have a wallet/card case.
3. Use a wall charger with higher wattage
4. Your phone's "Optimized Battery Charging" setting could be intentionally slowing the charge.
5. Putting your phone in airplane mode will increase charging speed

FAQ's

Will wireless charging demagnetize my credit cards?
Nope. Not a chance.

My phone is getting warm during charging, is that okay?
Yes. It's normal for your phone to warm while charging. Just keep the charger in a cool ventilated spot to ensure things don't get too hot to handle.

Can I charge my phone through a Smartish Wallet Slayer case?
Yup. Charge Island is specifically designed to play nice with Smartish Wallet Slayer cases.

Why do metal cards prevent wireless charging?
Any type of metal blocks the wireless field required for charging.

My case is thick and beefy. Can I still charge?
Mostly, yes. Charge Island can charge through all but the beefiest of cases. Again, just no metal.

Can I wirelessly charge through a battery case?
Nope. Maybe in an alternate universe, but not here on Earth.

Where can I get a fast wall charger?
We're glad you asked. You can find the perfect partner right here: [smartish.com/volt45](https://www.smartish.com/volt45)
