

#### Bluetooth Transmitter Status:

1. When first time using, plug the Bluetooth transmitter into the USB port of the computer. The transmitter will enter the pairing status when your pairing list is empty and the LED indicator on the transmitter flashes red and blue alternately. Take the earbuds out immediately to pair.

The LED indicator will flash blue every 2 seconds if connected successfully.

2. If you have paired the Bluetooth transmitter to earbuds once, your transmitter will enter the re-connection status for 10 seconds when you re-plug the transmitter. The LED indicator flashes blue every 2 seconds. If you take earbuds out of the case immediately during the re-connection status, you can connect them successfully.

If the transmitter fails to re-connect in 10 seconds, it will enter the pairing status automatically to search for new devices. In the pairing status, the LED indicator flashes blue and red alternately. Take out another pair of earbuds within one minute to connect them. After a minute, the transmitter will automatically turn into the re-connection status to search for the former-paired device. The LED indicator flashes blue every 2 seconds in the re-connection status, and the transmitter will stay in this status.

#### Note:

Except for the first-time pairing, the Bluetooth transmitter goes through these 3 stages in order every time you use it.

(To sum up: 10-second re-connection status -----> 1-minute pairing status ----> re-connection status that lasts)

With no other operation required, the Bluetooth earbuds will be connected to the BT110 transmitter automatically after the earbuds are on and enter the pairing status.

**FCC Statement**

This device complies with part 15 of the FCC rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

Changes or modifications not expressly approved by the party responsible for compliance could void the user's authority to operate the equipment.

NOTE: This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

The device has been evaluated to meet general RF exposure requirement. The device can be used in portable exposure condition without restriction.
